VILLAGE PARK® WHEELBARROWS

3 cu. ft. seamless tray with rolled edges. Tubular steel handles. Boxed.

1318

LIST PRICE \$18.69

Windows and doors are the worst fuel drainers

Windows and doors are the biggest fuel drainers in the average home. And since 70 million living units use 20 per cent of all the energy consumed in the U.S., the homeowner holds a great deal of responsibility — which he can use to save or lose money, not to mention the conservation of the nation's energy supply.

According to the National Home Improvement Council, the University of Illinois has calculated that ten 15 square foot windows will leak about 100 more gallons worth of fuel oil per season if they are only single glazed.

With a typical three by

five foot single glazed, double-hung window, almost three times the energy would be lost through the window as is lost around the sash area.

Storm doors help, too, because heat loss through or around the door is about the same.

One square foot of glass can lose as much heat as ten square feet of wall.

For these reasons, few installations in the home pay off for themselves as quickly as do storm doors and windows and replacement windows.

Current estimates are that in four to five years, the homeowner will recover the cost of his installation.

Electronic security key to protection

Many people today are "scared to death" because crimes against people and property have reached astronomical proportions. Current figures released by the United States Department of Justice indicated a rise of 67 percent from 1969 to 1974, and an increase of 188 since 1960. In fact crime in the streets was a major issue in recent Presidential campaigns.

Man instinctively has the desire to protect his family and possessions from harm or vandalism. But men who once felt secure by locking their doors have come to realize that they can no longer depend overburdened and understaffed police departments as the only defense

against rising crime.

Electronic security can help protect families from attack and property from intrusion and vandalism. An electronic key, computerization, and the most advanced state of the art technology, have produced the finest security systems available in the world.

Key Security, Inc. was formed in 1973 by Richard and Jerry Mekolichick. The firm was almost an instant success in N.E. Pennsylvania. Key Security's have boosted the company to prominence in the policies, principals, and service industry. At the end of 1974, over 1 year from its beginning, Key Security become recognized as a leader in this area.
