Groundbreaking set for Lake-Noxen

Ground-breaking ceremonies for the new Lake-Noxen Elementary School will be held on Sunday, Sept. 23, at 3:30 p.m. according to an announcement by Gilbert Tough, president of the Lake-Lehman

Board of School Directors. In making the announcement, Tough urged all interested citizens to be present for this very important community event. Those attending the ground-breaking

ceremonies will be teachers, students, members of the various taxpayers organizations, members of the Citizens Advisory Council, parent-teacher organizations and professional staff members.

The new Lake-Noxen Elementary School has been designed to replace the school destroyed by a fire last February. The new structure will contain 18 "regular classrooms", two kindergarten rooms, two special education rooms, one art room, one music room and a library.

Powderhorn residents worry about sewage

Dallas Borough can't do much for Powderhorn Estates residents concerned about the future of their "sand mound" sewage system, but borough representatives will take a look at water-and-ice troubled Reservoir Road and try to ease its residents' difficulties. Paul Clemm of Hickory St. in Powderhorn Estates told council Tuesday night that residents whose sewage flows into a sand mound on the property of the developer are

concerned over what might happen should the developer leave. As it is, said Clemm, they've been paying \$151 per year for maintenance of the system, and they're wondering what will happen if a new owner of the developers' property, where the mound is situated, does not maintain the original agreement. He asked council where responsibility for the

The new building will be comparable, in many respects, to the Lehman-Jackson elementary school which was opened in 1975, thus meeting the school board's goal of an equal educational opportunity for every elementary student. To be built at a cost of \$3.4 million, the school will accommodate approximately 545 students and ill offer Lake-Noxen

students access to a gym-multi-purpose room, comprehensive library and other modern educational facilities for the first time. In addition, a modern kitchen and cafeteria area will be provided. One of the unique features of the building will be a "floating stage area" which, through a series of folding partitions, will be accessible to several instructional areas in the building. These facilities will be made available to the community for civic and recreational purposes throughout the school year and conceivably during the summer vacation periods. Special consideration has been given to handicapped students in every phase of the design process and an elevator will be available for youngsters with physical handicaps as will special play facilities and learning areas. Representatives of the various faiths will be present to pronounce invocation and benediction.
