booth

Miss Total Woman-  
Claire Marie Steinberg

1st Runnerup-  
Anita Aikman

2nd Runnerup-  
Marily Walko

Miss Congeniality-  
Connie Suder

Miss Outstanding-  
Cindy Adamczyk

## Nesbitt Memorial Hospital supports County Fair

Nesbitt Memorial Hospital is actively participating in this year's Luzerne County Fair in keeping with a past tradition of community support.

Nesbitt Memorial Hospital personnel will offer free screening tests at the Back Mountain

Medical Center building beginning Thursday, Sept. 4. The tests will be offered during the hours the Fair will be open.

Hospital personnel will offer free blood pressure examinations, hypertension screening tests, free

pulmonary function screens, and explanations of physical therapy treatments, cardiology tests, and radiology techniques. The purpose of these screening exams and displays will be to provide insight into medical services available to patients.

In addition to these examinations special tours of the Back Mountain Medical Center will be available on Thursday, Friday, Saturday, and Sunday.

In addition to these services the auxiliary of Nesbitt Memorial

Hospital will sell baked goods at the Fair Grounds. All proceeds from the sale of baked goods will be donated to the Fair in support of the Medical Center and Mobile Intensive Care Unit.

A special information booth will also be

available at the Fair Grounds depicting the hospital's expansion and renovation program. An artist's rendering of Nesbitt Memorial Hospital as it will appear at the end of the construction program will be on display.

# Central heat with wood & save hundreds of dollars a year.

Thermo-Control system can make your present furnace obsolete. Virtually eliminate need for gas or oil.

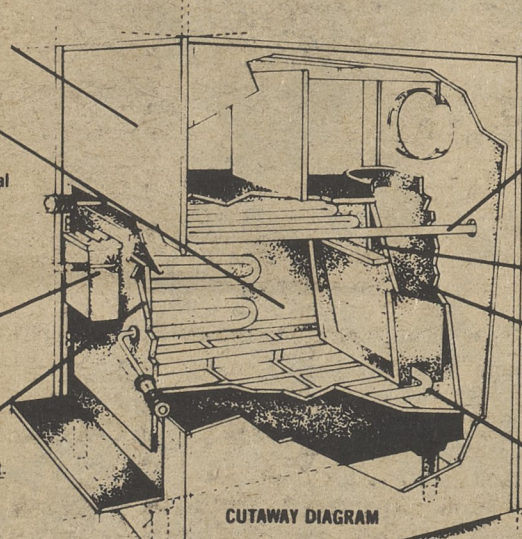

Warm air plenum captures maximum heat.

Front to back downdraft — produces most efficient, effective wood fire. (Our coal systems have an updraft — for most efficient coal fire.)

Thermo-Coil thermostat — for up to 15 hours of even heat per load of wood.

Primary air pre-heating chamber. Brings air to fire hot.

Tested safe by an independent laboratory, according to UL standards.

CUTAWAY DIAGRAM

The ultimate coal and wood burning system.

Optional water pipes. One set can heat domestic hot water free; other can be hooked up to your central hot water heating system to turn your furnace into a back-up and save you money.

Front controlled back baffle — for easy start-ups and clean loading.

Secondary combustion chamber — to efficiently burn wood gases.

Secondary air pre-heating pipes — bring air to combustion chamber at near-ignition temperatures for most effective burning.

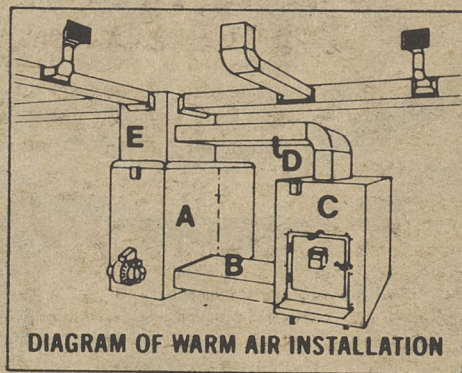

DIAGRAM OF WARM AIR INSTALLATION

Thermo/Control heats so well that, chances are, your old furnace won't even kick on all winter.

Here's how it works: Cool air comes from the heat exchanger of present furnace (A). It travels through a connecting duct (B) into the plenum surrounding your Thermo-Control stove (C). The air is warmed by the stove's radiant heat, and rises through a second duct (D), then on to the plenum (E) of your existing system. From there, it continues to the duct openings in your home.
