INTRODUCING THE FIRST OF THE SECOND GENERATION TURBOS.

Saab put the first turbocharger into its automobiles back in 1977, when turbos were still considered quite a breakthrough for everyday driving. Finally, a small engine could deliver high performance.

Car manufacturers naturally seized on the idea, and now you can have your pick of turbocharged automobiles. All of which have small engines that deliver high performance.

But while the others were still working on these first generation turbos, Saab had designed a second. A turbo that not only delivers better performance than its predecessor, but does so on less gas.

The trick—another Saab innovation, incidentally—is Automatic Performance Control. This is a device that automatically adjusts turbo boost as you drive, to keep it at optimum efficiency. The result is a 10% increase in torque, an 11% increase in mileage, and a 0-60 mph time that's a full second faster.*

Given all these advantages, we expect that eventually there will be other second generation turbos.

We just thought you might want to be a few years ahead of the crowd.

SAAB
 The most intelligent car ever built.

*Saab 900 5-speed Turbo: (1) EPA estimated mpg, 31 estimated highway mpg. Remember, use these figures for comparison only. Mileage varies with speed, weather and trip length. Actual highway mileage will probably be less. Saab 900 5-speed APC Turbo: (2) EPA estimated mpg, 34 estimated highway mpg. Figures based on comparison with 1981 Saab Turbo.
