Our Newest Resource in Engineering Education **THE CENTER FOR TECHNOLOGY**

"There will be shortages of engineers by the year 2000 . . . the number of needed electrical engineers alone is expected to increase by half by the end of the century. Demand is also heavy for other types of engineers: mechanical, electrical, petroleum, civil and environmental."

-Career Trends, Dec. 1989

"Our surveying technology and telecommunications technology programs provide graduates with close to 100% job placement. I usually have more companies coming to recruit than I have students who need jobs. Most of our engineering and technology students are employed months before they graduate."

-Joe Kolesar, Coordinator of Job Placement, Penn State Wilkes-Barre

The great Penn State tradition of education in engineering is being carried into the future through the superb faculty of engineers at Penn State Wilkes-Barre and the modern new Center for Technology located in the brand new Bell Atlantic/Bell of PA building on the campus in Lehman. This facility houses laboratories in telecommunications technology, biomedical equipment technology, electrical, civil and mechanical engineering technology, including robotics and computer-aided design (CAD). The Center includes a telecommunications auditorium for satellite videoconferences of special interest to business and industry.
