

# Think spring! But don't be afraid to plant in the fall

For spring blooms, fall is the time for planting! Crocus, snowdrops, daffodils, tulips, hyacinths...the colors of spring are something to look forward to all winter.

Spring-blooming bulbs need winter months to prepare for blooming. Root systems are set during this time of the year. The addition of Bulb Booster to the bottom soil will increase your blooming success. These bulbs also require a number of weeks at low temperatures in order to bloom.

The possibilities of spring bulbs are really endless. Gardening books are full of great ideas (and photos) that you can bring to your own garden. For the best display, plant a mass of bulbs (at least 10-15) of the same kind. Experiment with color combinations and new varieties. With a little planning, you can have a succession of blooms from early March through May and June.

- Bulb Planting Tips:**
1. Prepare the soil. Turn the soil over to the depth of about 10 inches to give roots a good start.
  2. Fertilize by adding Bulb Booster at the bottom of the bed or in the bottom of the bulb planting holes.
  3. Plant at the proper depth as instructed.
  4. Water the bed thoroughly after covering the bulbs with about an inch of soil. Complete filling in the bed and then water again.
  5. Plant in mass for the best displays!
  6. After the first penetrating frost protect the plantings with a 2 to 3 inch mulch layer.

## Did Electric Heat Leave You In The Cold Last Winter?

If you're not satisfied with the comfort your electric heat gives you, consider a move up to oil!

- OIL • KEEPS YOU WARMER**
- COSTS LESS
  - GIVES YOU MORE HOT WATER
  - IS ENVIRONMENTALLY FRIENDLY

Easy conversion. More comfortable. Cost savings. Move up to Oil today!

**AIR CONDITIONING IS POSSIBLE!**  
If you're replacing an electric heat pump with oil heat, you can keep your efficient air conditioning unit.
