See yourself from a different point of view.

Sometimes, your feet seem so far away, don't they? After all, your smiles, sneezes, winks, those holes for your ear buds, that hand bringing you your first morning sip of coffee — all of the really important stuff seems to be at or near the top of you. Your feet are, well, way down there.

But now, see yourself from a different point of view. Your feet are your foundation. They support you whenever you stand, walk, or run. Foot instability can be the cause of many postural problems throughout your body. A bad hair day isn't going to make your feet sore, but bad feet can cause aches and pains all over.

We care about your feet. Chiropractic adjustments and Foot Levelers' custom-made Spinal Pelvic Stabilizers — a unique form of in-shoe orthotics — have helped thousands of people bring their bodies back to a natural state of alignment.

Call us today to see how our Associate™ Platinum digital scanner can show you how your feet affect your postural status.
