any Hav Munitions Bureau W Offici

olution of the ent problem in plete unity and efforts of the fed department of la the Committee Pennsylvania ha according to ann the Philadelphia with other comm viduals, has been federal government months in the task of s labor.

By this plan the United em employployment service, the state ment service and the civilian service and labor division of the Committee of Public Safety will work together to aid farmers through the special war farm labor supplying bureau, which has been in operation on the floor of the hourse as a sub-bureau of the federal employment service since last May. The farm station in the bourse will hereafter be conducted by a branch of amalgamated services under the control of E. C. Felton, who has been named by the federal department of labor as federal director of employment for Pennsylvania. Mr. Felton is killed at Pennsylvania colliery while also head of the Public Safety Committee's civilian service and labor department

"The federal-state farm employment Thursdays until the middle of March bureau" is the title given to this agenafternoon and evening that heat and cy, and it will handle all the farm lalight may be saved. bor work of the federal, state and Safety Committee services. Its work resolution protesting to the Public will be interstate in character, and Service Commission the proposed inaearby Jersey and Delaware farmers will be aided as readily as Pennsylvania farmers.

Felton has named Bernard L. Frankel, who has been a volunteer worker at the station in the bourse since last April, to take charge of the new co-operative bureau. Mr. Frankel is a graduate of the University of Pennsylvania in the class of 1916 and left the second year class of the University Law School last spring to serve at the bourse bureau. He has had experience in farm labor supplying. thich qualifies him exceptionally for his new task.

Mr. Frankel and the bureau of which he is in charge will work with Milton r. Townsend, superintendent of the state employment bureau of the department of labor and industry, with endquarters at 1519 Arch street, Philadelphia, from which the other tabor supplying activities of the federalstate-Safety Committee service will be curried on. Both officials also will cooperate with Robert W. Meyer, the farm help specialist of the federal department of agriculture, who is located at the headquarters of the Safety Com-

Fixes Price. (Prepared by the United States Depart-ment of Agriculture.) A good job to attend to between the busy seasons is the building and re-oairing of fences. A farm fence should combine the two qualities of service and economy. To give satisfactory service it must be constructed so as to turn all kinds of stock without in-jury to them. To be economical it must be built as cheaply as is consis-tent with durability. The fence that 's erected at a low initial cost is not necessarily economical, for it may be short lived. Wire fences are very generally re-placing those of stone, wood, and hedge wherever the latter are becom-ing unserviceable. In selecting a wov-en-wire fence, it is preferable to eco-nomize by eliminating unnecessary

nomize by eliminating unnecessary wires rather than by using a lighter weight wire. In pastures where only cattle or horses are to be kept there is no need of providing a fence the spacing in which is close enough to turn hogs.

Weight Determines Cost.

The factor which determines the price of woven wire fencing is its weight, so that in fences of the same height a wide spaced fence with comparatively few wires costs less than a narrow spaced one with more wires. On the other hand, it is becoming generally recognized that the use of heavy wire in fencing is economical. The initial cost of the heavy wire is greater, but its durability is more than sufficient to offset this disadvantage. The labor and other costs in the construction of a fence are practically the same whether a heavy or a light grade of wire is used, but with heavy wire the fence lasts so much longer that this cost of construction is distributed over a much longer time. That this is appreciated by a majority of farmers is indicated by the increase in the percentage of heavy wire that is being sold for fencing purposes.

Common Type of Fence.

For the general farm on which all kinds of stock are kept, and on which Charles J. Hengen, one of the oldest the rotations practiced call for tempoclerks in Norristown post office, has rary pastures, the common type of fence now being adopted in the north central states is one which has approximately ten line wires and a total height of about four feet. The bottom wires are spaced about three inches Such a fence constructed from all No. 9 wire with a strand of barbed wire on the top, Osage orange, locust. red cedar, steel, or cement line posts set a rod apart, and ends and braces of the same materials as for the line posts at distances of 40 rods, is now being built on many farms and is proving serviceable and economical when its long period of usefulness is considered. Such a fence is exceptionally durable and should last approximately 22 years.

will crowd his land with shacks, put

up by the cheapest builder he can find,

To Moisture-Proof Brick Walls. The following coating for rough brick walls is used by the United States government for painting lighthouses, and it effectually prevents noisture from striking through:

Take of fresh Rosendale cement, three parts, and of clean, fine sand, one part: mix with fresh water thoroughly. This gives a gray or granite color, dark or light, according to the color of the cement. If brick color is desired, add enough Venetian red to the mixture to produce the color. If a very light color is desired, lime may be used with the cement and sand. Care must be taken to have all the ingredients well mixed together. In applying the wash, the wall must be wet with clean fresh water; then follow immediately with the cement wash. This prevents the bricks from absorbing the water from the wash too rapidly, and gives time for the cement to set. The wash must be well stirred during the application. The mixture is to be made as thick as can be applied conis admirably suited for brickwork. fences, etc., but it cannot be used to advantage over paint whitewash.

laving the whole blame on something True Child of the Wild. Summer or winter there is no mistaking the arboreal individuality, the unique personality of lady beech. Her very independence and originality have generally excluded her from parks and improved estates and all places where nature is bent and broken by the two hy-four rules of art and artificiality. She is a true child of the wild. Given her own way she is one of the best of friends. At all seasons she invites amicable intimacy and rewards all her woodland acquaintances. But best of all is her winter mood, when almost alone among the sylvan sisterhood she stands clad and seemly, with summer's voice lingering in her boughs and warm kindliness sounding in the music of her crinkled bangles .- Exchange.
