Manufacturers and dealers in all kinds of Lumber,

Contractors and Builders.

Estimates made; personal attention given and work guaranteed. OFFICE, Brown's Building, Milford, Pa.

### T. Armstrong & Co.,

Successors to BROWN & ARMSTRONG.

We offer a line of new Spring Goods,

### ......UNSURPASSED AND COMPLETE......

Our point is that you need not go away from home to supply all your needs, or to secure bargains. We expect to satisfy you in both particulars.

DRY GOODS, new and Stylish. GROCERIES, fresh and good. HARDWARE, BOOTS, SHOES, AND CLOTH-ING. Any thing in any line at bottom prices.

To accomplish this end we have adopted a new system. All our prices are fixed on a ba is of cash payment. This abviates the n possity to allow a margin for bad debts and interest. To accommodate responsible parties we cheerfully open monthly accounts, and expect prompt payment monthly, as our prices will not enable us to carry accounts

Statements randored the first of every month, and if pand within three days from date of bill, a cash discount of 29% is allowed. The same discounts given on all cash purchases exceeding \$1.00. Goods sent out will be C. O. D. unless otherwise previously arranged.

A New Chemical Which is Better Than the X-Ray.

Frof. George F. Barker, of the physical laboratory of the University of Pennsylvania, exhibited last week for the first time in America, the newly discovered chemical element radium, which seems destined to create a great stir in the scientific world. Years ago. stir in the scientific world. Years ago
Bequerel found that salis of the rare
metal uranium possessed the power of
throwing off a feeble end invisible radiance, like the X-rays Mme. Curie, in
150 Paris, last year isolated from the Bohemian mineral pitchblend two other
elements that behave in the same manrepresentation of the same manthem she called "potonium" and the
other "radium." The latter is said to
the of the 160,000 times as histories as pranium

be 100,000 times as intense as uranium in its photographic effect. Prof. Barker has been experimenting Prof. Barker has been experimenting with all three of these elements and with the mineral pitchbiend or urnnite from which the two new elements are derived. He showed to the Bibliographical Club here this week a series of photographic plates on which impressions had been produced by these substances. His procedure has been as follows:

"A photographic plate was inclosed in black paper and then covered with yellow paper. After one whole day's a exposure to the sunlight no effect was produced. This precaution proved the thoroughness of the protection. Then the various metals and saits were placed upon the paper-covered plate and they produced dark stains.

"In order to take photographs of objects such as a hand or foot these objects would be placed between the metal and the plate, and the result would be similar to those obtained by the X-rays such substances as bone would show clearly through the fiesh and sur-counding these.

show clearly through the flesh and sur-rounding tissue. A photograph can be taken by means of radium in half a

minute.

"The importance of this discovery can hardly be overestimated. The wonderful results of the X rays now so useful in surgical diagnosis, can be duplicated by a method much cheaper. Moreover radium seems to suffer no diminution of energy or loss of weight during the process, in addition to producing an impression on the photographic plate, radium produces phosphorescence, and discharges electrified bodies. Thus it will be seen that it possesses all the qualities of the Ro possesses all the qualities of the Ro-

entgen rays.
"Radium apparently violates one of the fundamental laws of physics, namely, that of the conservation of energy. It does not derive its photographic power from the smallight nor lose if by expenditure."-N. Y. Tribune.

### BRIAR PIPES.

Signs by Which a Smoker Can Tell a

Good One. It is strange, and yet it is a fact, that the English workman is of no use in the manufacture of pipes. The most skillful artisans are either the Austri-ans or the French. The pipemakers are a very select, small bedy, and observe every precaution to provent their trade being learned by outsiders. The work-men are clever and they can carn high

men are clever and they can earn high wages.

Speaking of the cost of a pipe a successful manufacturer comarks: "When the blocks arrive over here they are at once sorted. Out of one gross of blocks I rarely ever get more than three or four pieces of wood for the ordinary everyday pipe. The remaining seven dozen pieces of wood are thrown into the furnace, and, I might mention belp considerably to generate the necessary stoam power for the machinery. Thus fully 60 per cent, of the material I purchase is of no use wintever, and it is this extraordinary amount of waste that causes the briar pipe to be so expensive.

It is this extraordinary amount of waste that causes the briar pipe to be so expensive.

The prevailing defect. I may mention by the way, is generally in the form of a crack in the wood. I used to sell these defective blocks of briar at a penny spiece, and have sent away as many as 40,000 condemned briars at a time, but now I burn them all. The briars were sent abroad and the cracks and thaw stopped with putty or some other composition and then steeped in a strong solution of permanganate of potash, which desply colored the wood and made the defect invisible except on close inspection. All those briars you see of a very deep color have passed through the permanganate of potash bath, and you may rest assured that there is a defect somewhere—they would not be that color if it were not so, because natural briar is of a medium light hue.

"As to the average life of a briar pipe, you may take it for granted that a pipe will last you as many years as it costs you shillings that is to say, if you pay six shillings for a pipe if you are a moderate smoker, it will last you as years. The style of briar pipe that is mostly in demand is that with a bowl cut the straight way of the grain. This is not the most reliable kind of pipe, as the sudden expansion by the heat and contraction of the wood when you stop emoking cause it to spill in a short time. The best pattern of briar popt is a short time.

you stop smoking cause it to split in a
g. ... short time. The best pattern of briar
is that with a bowl the grain of which
is very motiled in appearance, or, as
35 the ande call it, the 'bird's eye grain.'
14 06 This will never split."

Clease the heavy prify the block is vigorate the body by using D Witt's little early rises. These fam 70 ous little pills always act promptly.
