Work on the Farm.

Winter Plowing As all stiff clays are improved by being plowed in time to subject them to the meliorating influence of frest, we would have such soils intended for spring cultures to sieze every opportuisty through the winter to \$1,00 a year, if paid in advance, or \$2,00 if paid at the their interest to plow them as deep as a strong penso. team will enable them to do; that in plowing biscontinuances optional, except when arrentages are paid. they should see that the work is well done, no Adventiseness one dollar persquare of twelve tines, or balks left, that the surrow slice be so turned less, for the first three insertions, and twenty decembs force on the property of the service to be as to present the greatest possible service to be as to present the greatest possible service to be those who advertisely the year, operated upon by the frost, and that the plowing be not done when the ground is wet, -as becorred to ensure attention. clay soil when turned up in such state becomes a bed of mortar, whose condition cannot be improved during the entire ensuing season.

Fattening of Hogs.—As it is an acknowledged fact that swine fatten much quicker in inild than it cold weather, the process of feeding should be pushed forward with all possible dispatch, so that the work may be accomplished in good time. The theorists ays that a portion of the food given to hogs in very cold weather goes to supply heat to his body, and that such a portion of the sportion of the such a portion of the such a portion of the such a portion of the food given to hogs in very cold weather goes to supply heat to his body, and that such a portion of the such a portion of the such a portion of the such as such as portion of the such as such as portion of the such as a such as suc
