OLD METAL WANTED,
 For which the highest prices will be paid in cash or trade.
 March 13—6m.

\$200,000 DOLLARS

TO BE divided and \$100 certificates paying a dividend of eight and ten per cent per annum issued to all who subscribe for Stock in the Chamberburg Woolen Mill.
 The great success of the Company and demand for their goods has encouraged them to enlarge the capacity of their Mill and increase their capital stock. They now offer \$500,000 additional stock for sale at its par value \$100 per share. This stock pays a dividend of eight per cent per annum on the special and ten on the common, and can be made to pay 12 to 15 per cent per annum. The Company owns all that splendid water power of the Falling Spring in the heart of the Borough of Chamberburg, including the Flouring Mills. Their Woolen Mill uses 60 horse power and leaves enough to run the Flouring Mills of 4 pair of Burrs. These Mills rent for one half the interest of the whole cost of their real estate except the Woolen Mill building and Machinery. Any who have \$100 or more and especially Farmers wishing to make a safe and profitable investment are requested to examine the merits of this stock before investing in land or Government securities, as it pays at least 8 per cent and costs no premium, making the safest and most profitable investment now offered, and besides encourages industry and advances the interest of the community at large. You are referred for fuller particulars to our printed circular, and a personal examination of the Mill and Machinery. We invite a careful examination being convinced that the better the affairs of our Company are known and the working of the Mill is understood, the more certain we are to gain confidence and that a correct knowledge of all our affairs is all that is wanting to secure a speedy sale of all the stock.
 Subscriptions received at the office of the Company at the Woolen Mill, or at the 1st National Bank of Waynesboro, 1st Nat. Bank of Greencastle, by M. Patton, Esq., Merchants, Judge Ruby, Shippenburg, and Judge Ferguson, Path Valley or Geo. Baisley Esq., who will visit in person different localities.

Improved Thrashing Machine!

Farmers will please look at the great advantage in Thrashing Grain with

GEISERS' PATENT
SELF-REGULATING GRAIN SEPARATOR,
CLEANER AND BAGGER.

With the latest Improved Triple-Geared Horse Power, driven either by Gear or Belt.

No. 1 is a eight-horse power, with cast iron thresher frame and wrought iron and wood cylinder, sixteen inches in diameter and thirty-three inches long. Trunk has ten-inch rake crank and seven inches is thirty-five inches wide, and delivers the straw on the second rake, these carry the straw out on their tops, and deliver it on the stacker, which will deliver about thirty-five feet beyond the feeder, on a stack fifteen to eighteen feet high, and can be easily managed to carry the chaff with the straw, or deliver it in a separate place. The trunk and fan sides being closed, to confine the straw and chaff, remedies all difficulties in cleaning grain against westerly weather. It bags the grain by reasonable management, sufficiently clean for market, and its capacity, under ordinary circumstances, is from twenty to forty bushels per hour, using eight horses and the same number of hands; but to force the work under favorable circumstances, it will thrash from forty to fifty bushels per hour, and with more ease and agreeableness to hands than any other machine now in common use.

The No. 2 Machine, truly represented in the above cut, is particularly adapted to the farmer's use; in intended to apply to any common level or railway power; weighs 1,300 pounds; has an iron thresher frame, and cylinder, 12 1/2 inches in diameter and 28 inches long; delivers the clean grain in bags, or if desired, in a 100 bushel sack. It delivers the straw fitted for the feeder, or if desired, can deliver the straw and chaff together; will thrash and clean, in good grain, ready for market, from 100 to 175 bushels of wheat, or from 300 to 600 bushels of oats per day, using four or six horses, and the same number of hands; but to force the work, under most favorable circumstances, good grain, &c., will thrash and clean considerably more. The Machine will thrash and clean all kinds of grain generally thrashed with the common machine, and requires no more horse power, but in many cases does not run so hard. It will apply very well to a two-horse railway power.

Now-here is what the Farmer-and-thresherman wants, a Separator to go from farm to farm, to thrash grain, with more satisfaction than any other separator now in use, and why is it? Because this separator has a self-regulating blast, which prevents grain from blowing into the chaff, and also has a self-regulating feeder to feed the cleaner and it has rollers and combs in the cleaner which prevents it from choking. Why does this machine run so light, and give so little trouble? Because there is less friction in the Journals, and the rakes and fan are geared so that you have no trouble with Belts breaking and slipping, causing dust to fall into the wheat. Why does it clean against the wind? Because the blast has direct action on the grain and the cleaner is so well arranged that the wind has no chance to drive the dirt into the hopper. Why is it built permanently on two wheels and the front carriage separate, ready to attach when necessary? Because it is more convenient in the barn without the front carriage. You can turn the machine or run it from place to place more easily. Why has it not got Elevators like some other machines? Because the Elevators carry the dirt back alternately into the cleaner which must eventually go into the good wheat or in the chaff, and all know, that dirt should be kept separate for feed, &c., we might as well keep shoveling the Tailings under our hand fan into the hopper and expect to get the grain clean. Why is this separator more cleanly and satisfactory to work a barn than others? Because the Fan and Trunk Sides are closed up to prevent the wheat chaff and dust from coming out and scattering over the floor, causing waist and giving much trouble with dirt and sore eyes, &c. Why do Threshermen get more work with these separators than they do with others? Because this separator has all these advantages and many more, which makes it a separator suitable and a paying one for all farmers and Threshermen that have grain to thrash, will suit in most cases farmers must suit themselves to the machine, because the machines will not suit the farmer. In short, this is the cheapest, most durable, reliable, simple and most agreeable to work at, and the only separator that will clean and bag the grain sufficiently clean for market under all circumstances.

Farmers can rest assured that this machine is no humbug, and judging from the high recommendation of farmers that are using them, we must come to the conclusion that it is the very Machine that farmers want and will have as soon as they have an opportunity to appreciate and attest its merits, for which we hope they will give us an opportunity, as we are willing to be responsible if it does not perform as represented in this Circular.

A reduction of 2 per cent. on all orders handed in on or before the first of April, 1868.

Shop Prices of Machines range from \$215. to \$540.
 We warrant the machines to be as above represented; also against any reasonable defects of material workmanship, &c.

DANIEL GEISER, Proprietor.
