STOVER & WOLFF. THE GREAT BLOOD PURIFIER

DR. J. FAHRNEY'S celebrated Blood Purifi-er, the greatest medicine of the age. This medicine was discovered 70 years ago by old Dr. Fahrney of Washington county, Maryland. It was formerly put up in packages, widely known as the "Preparation for cleansing the Blood" but is now put up in liquid by the present proprietor, who has improved it. being pleasanter to take and the dose smaller. This Blood Purifier contains 23 ingrediants and is composed of Roots, Barks, Leaves, Sceds, and Bernes, each possessing the highest depree of purifying properties and is so combined as operate through the Blood upon every organ and emunctory of the human economy. This Blood Purifier is good for all Chronic diseases, such as Sick head ache, Scrofula, Tetter, Running Ulcers, Pimples, Scald Head, White Swelling, -disease-of the Spine, Carcers, Ring worms, Rhuematism Dyspepsia, Costiveness, Consumption, Bleeding of the Lungs, Liver and Kidney complaints. This article is prepared to meet the various conditions of the body arising from impurity of the Blood and if the disease is within the control of medicine it is found in this article. Testimonials of its wonderful alternative properties could have been obtained of hundreds and thousands of individuasis who have

Prepared only by FAHRNEY & REINHOLD. Corner North Queen, and Walnut Streets, Lancaster Penna. For sale by

been cured of diseases of many years standing.

Improved Thrashing Machine

Daniel Geiser. B. E. Price.

Farmers will please look at the great advantage in Thrashing

GEISERS' PATENT SRLH-REGULATING GRAIN SEPARATOR

CLEANER AND BAGGER.

With the latest Improved Triple-Geared Horse Power, driven either by Gear or Belt

No. 1 is a eight-horse power, with cast iron thresher frame and wrought iron and wood cylinder, sixteen inches in diameter and thirty three inches long. Trunk has ten inch rake crank and seven rakes is thirty-five inches wide, and delivers the straw on the second rake, these carry the straw out on their tops, and deliver it on the stacker, which will deliver about thirty-five feet beyond the feeder, on a stack fifteen to cighteen feet high, and can be easily managed to carry the chaff with the straw, or deliver it in a separate place. The trunk and fan sides being closed, to confine the straw and chaff, remedies all difficulties in cleaning grain against windy weather. It bags the grain by reasonable management, sufficiently clean for market, and its capacity, under ordinary circumstances, is from twenty to forty bushels per hour, using eight horses and the same number of hands; but to force the work under favorable circumstance, it will thresh from forty to fifty bushels per hour, and with more ease and agreeableness to hands than any other machine-now in common use.

The No. 2 Machine, fully represented in the above cut, is particularly adapted to the farmer's use; in intended to apply to any common lever or railway power; weighs 1,300 pounds; has an iron threshers frame, and cylinder, 12½ inches in diameter and 28 inches long; delivers the clean grain in bags, or it desired, in a half bushel. It delivers the straw fifteen feet from the feeder, or if desired, can deliver the straw and chaff together; will thresh and clean, in good grain, ready for market, from 100 to 175 bushels of wheat, or from 300 to 500 bushels of oats per day, using four or six horses, and the same number of hands; but to force the work, under most favorable circumstances, good grain, &c., will thresh and clean considerably more. The Machine will thresh and clean considerably more. The Machine will threah and clean all kinds of grain generally threshed with the common-machine, and requires no more horse power, but in many cases does not run so hard. It will

apply very well to a two-horse railway power Now here is what the Farmer and thrasherman wants, a Separator to go from farm to farm, to thrash-grain, with more satisfaction than any other separator now in use, and why is it? Because this separator has a self regulating blast, which prevents grain from blowing into the chaff, and also has a self reg-ulating teeder to feed the cleaner and it has rollers and combs in the cleaner which prevents it from chosking. Why does this machine run so light, and give so tittle trouble? Because there is less friction in the Journals, and the rakes and fan are geared so that you have no trouble with Belts breaking and slipping, causing dust to fall into the wheat. Why does it clean against the wind? Because the blast has direct action on the grain and the cleaner is so well arranged that the wind has no chance to drive the dirt into the hopper. Why is it built permanently on two wheels and the front carriage separate, ready to attach when n ecessary? Because it is more convenient in the barn without the front carriage. riage. You can turn the machine or run it from place to place more easily. Why has it not got Elevators like some other machines? Because the Elevators carry the filth back alternately into the cleaner which must eventually go into the good wheat or in the chaff, and all know, that fifth she uld be kept separate for feed, are we might a mall the state of feed are made to the control of the separate for feed are we might be supported by the separate for feed are we might be supported by the separate for feed are we might be supported by the separate for feed are we might be supported by the separate for feed are we might be supported by the separate for feed are we might be supported by the separate for feed are well as the supported by the separate for feed are supported by the separate for feed are supported by the supported b separate for feed, &c, we might as well keep shoveling the Tailings from under our hand tan into the hopper and expect to get the grain clean. Why is this separator more cleanly and satisfactory to work about than others? Because the Fan and Trunk Sides are closed up to prevent the wheat chaff and dust from coming out and scattering over the grain special section much trouble we the dirt and sore from coming out and scattering over the floor, causing waist and giving much trouble with dirt and sore eyes, &c. Why do Thrashe rmen get more work with these separators than they do with others? Because this separator has all these advantages and many more, which makes it a separator suitable and a paying one for all farmers and Thrashermen that have grain to thrash, whilst in most cases farmers must ship the separator has been advantages and many more, which makes it as expansion to the farmers. In short must suit themselves to the machine, because the machine will not suit itself to the farmer. In short, this is the cheapest, most durable, reliable, simple and most agreeable to work about; and the only separator that will clean and bag the grain sufficiently clean for market under all circumstances.

Farmers can rest assured that this machine is no humbug, and judging from the high recommenda ion of farmers that are using them, we must come to the conclusion that it is the very Muchine that larmers want and will have as soon as they have an opportunity to appreciate and attest its merits, for which we hope they will give us an opportunity, as we are willing to be responsible if it does not perform as represented in this Circular.

A reduction of 2 per cent. on all orders handed in on or before the first of April, 1868.

Shop Prices of Machines range from \$215, to \$540. We warrant the machines to be as above represented; also against any reasonable defects of material
