Sold at Retail by **D. B. RUSSELL,** Sign of the Big Red Horn, Waynesboro', Pa.

Improved Thrashing Machine!

Daniel Geiser. B. E. Price.

J. F. Oiler. Josiah Fahrney.

Farmers will please look at the great advantage in Thrashing Grain with

GEISERS' PATENT SELF-REGULATING GRAIN SEPARATOR, CLEANER AND BAGGER.

With the latest Improved Triple Geared Horse Power, driven either by Gear or Belt

No. 1 is a eight-horse power, with cast-iron threshing frame and wrought iron and wood cylinder, sixteen inches in diameter and thirty three inches long. Trunk has ten-inch rake crank and seven-rakes is thirty-five inches wide, and delivers the straw on the social rake, these carry the straw out on their tops, and deliver it in the stacker, which will deliver about thirty-five feet beyond the feeder, on a stack fifteen to eighteen feet high, and can be easily in a ridge to carry the chaff with the straw, or deliver it in a separate place. The trunk and fan sides being close, to confine the straw and chaff, remedies all difficulties in cleaning grain against windy weather. It bags the grain by economical management, sufficiently clean for market, and its capacity, under ordinary circumstances, is four twenty to forty bushels per hour, using eight horses and the same number of hands; but to force the work under favorable circumstances, it will thresh from forty to fifty bushels per hour, and with more ease and agreeableness to hands than any other machine now in common use.

The No. 2 Machine, fully represented in the above cut, is particularly adapted to the farmer's use; it is intended to apply to any common lever or railway power, weighs 1,300 pounds, has an iron threshing frame, and cylinder, 18 inches in diameter and 28 inches long; delivers the clean grain in bags, or if desired, in a half bushel. It delivers the straw fifteen feet from the feeder, or if desired, can deliver the straw and chaff together, with thresh and clean, in good grain, ready for market, from 100 to 175 bushels of wheat, or from 300 to 500 bushels of oats per day, using four or six horses, and the same number of hands; but to force the work, under most favorable circumstances, good grain, &c., will thresh and clean considerably more. The Machine will thresh all kinds of grain generally threshed with the common machine, and requires no more horse power, but in many cases does not run so hard. It will apply very well to a two-horse railway power.

Now, here is what the Farmer and thrasher wants, a Separator to go from farm to farm, to thresh grain, with more satisfaction than any other separator now in use, and why is it? Because this separator has a self-regulating blast, which prevents grain from blowing into the chaff, and also has a self-regulating feeder to feed the cleaner and it has rollers and combs in the cleaner which prevents it from choking. Why does this machine run so light, and give so little trouble? Because there is less friction in the Journals, and the rollers and fan are geared so that you have no trouble with belts breaking and slipping, causing dust to fall into the wheat. Why does it clean against the wind? Because the blast has direct action on the grain and the cleaner is so well arranged that the wind has no chance to drive the dirt into the chaff. Why is it built permanently on two wheels and the front carriage separate, ready to attach when necessary? Because it is more convenient in the barn without the front carriage. You can turn the machine or run it from place to place as easily. Why has it not got Elevators like some other machines? Because the Elevators carry the fifth back alternately into the cleaner which must eventually go into the good wheat or in the chaff, and all know, that fifth should be kept separate for feed, &c. we might as well keep shoveling the failings from under our hand into the hopper and expect to get the grain clean. Why is this separator more clean and satisfactory to work about than others? Because the Fan and Trunk Sides are closed up to prevent the wheat chaff and dust from coming out and scattering over the floor, causing waste and giving much trouble with dirt and sore eyes, &c. Why do thrashers get more work with this separator than they do with others? Because this separator has all these advantages and many more, which make it a separator suitable and a paying one for all farmers and thrashers that have grain to thresh, whilst in most cases farmers must suit themselves to the machine, because the machine will not suit the farmer. In short this is the cheapest, most durable, reliable, simple and most agreeable to work about; and the only separator that will clean and bag the grain sufficiently clean for market under all circumstances.

Farmers can rest assured that this machine is no humbug, and judging from the high recommendation of farmers using them, we must come to the conclusion that it is the very best Machine that farmers want and will have an opportunity to appreciate and attest its merits, for which we hope they will give us an opportunity, as we are willing to be responsible if it does not perform as represented in this Circular.

A reduction of 2 per cent. on all orders handed in on or before the first of April, 1868. Shop Prices of Machines range from \$215. to \$540. We warrant the machines to be as above represented; also against any reasonable defects of material workmanship, &c.

DANIEL GEISER, Proprietor. Geiser, Price & Co., Manufacturers, WAYNESBORO', FRANKLIN CO., PA.

FACTS ARE STUB BORN THINGS.

WE desire to call the attention of the people of Waynesboro', and surrounding country to the following FACTS:—1. The

SINGER SEWING MACHINE

Is the best for Family Use.

2. It has the best Hammer ever put on a Sewing Machine, commencing at the corner of the work, and turning a very pretty hem that will not wash out. It will hem into a square corner and out; around an abrupt curve; into a scroll; and turn the work all in neatly. It will also hem the edge of unbleached muslin without trimming off the fringe.

3. It has the best attachments for Hemming, Felling, Tucking, Cording, Ruffling, Braiding, Binding, and Trimming, ever put on a Sewing Machine.

4. It is the fastest running Machine in the world and runs the easiest.

5. It does not take six months to learn to use it. It is so simple that a child can use it.

6. It will out-wear any two other machines you can name, and hence the most durable.

7. It does its work equally well, at fast or slow rates of speed.

8. It cannot be got out of order by sewing.

9. With these facts, we invite you to come and see for yourself, and can assure you that after ten years practice with Sewing Machines, we know by practical experience what a Machine to sell and which to recommend; and can say that you will find it to your own interest to see these before making a purchase.

Fadies will please leave their orders with the undersigned who will promptly fill them.

THOS. J. FILBERT, Agent.

June 19—11.

DRUGS AND MEDICINES.
