SAVE YOUR FRUIT! Improved Thrashing Machine!

J. F. Oller.

Daniel Geiser.

Farmers will please look at the great advantage in Thrashing.

GEISERS'-PATENT SELF-REGULATING GRAIN SEPARATOR

CLEANER AND BAGGER.

With the latest Improved Triple Geared Horse Power, driven either by Gear or Belt

No. I is a eight-horse power, with cast iron throsher frame and wrought iron and wood evlinder. sixteen inches in diameter and thirty three inches long. Trunk has ten inch rake crank and seven rakes s thirty five inches wide, and delivers the straw on the second rake, these carry the straw out on their is thirty-five inches wide, and delivers the straw on the second rake, these carry the straw out on their tops, and deliver it on the stacker, which will deliver about thirty-five feet beyond the feeder, on a stack fifteen to eighteen feet high, and can be easily managed to carry the chaff with the straw, or deliver it in a separate place. The crunk and fan sides being closed, to confine the straw and chaff, remedies all difficulties in cleaning grain against windy weather. It bags the grain by reasonable management, sufficiently clean for market, and its capacity, under ordinary circumstances, is from twenty to torty bushels per hour, using eight horses and the same number of hands; but to force the work under favorable ircumstance, it will thresh from forty to fifty bushels per hour, and with more case and agreeableness the No. 2 Machine, fully represented in the above cut, is particularly adapted to the tarmer's use; in

intended to apply to any common lever or railway power; weighs 1,300 pounds; has an iron threshers frame, and cylinder, 12, inches in diameter and 28 inches long; delivers the clean grain in bags, or if desired, in a half bushel. It delivers the straw fifteen feet from the feeder, or if desired, can deliver the attaw and chaff togother; will thresh and clean, in good grain, ready for market, from 100 to 175 bushels of wheat, or from 300 to 500 bushels of oats per day, using four or six horses, and the same number of nands; but to force the work, under most favorable circumstances, good grain, &c., will thresh and clean considerably more. The Machine will threah and clean all kinds of grain generally threshed with the common machine, and requires no more horse power, but in many cases does not run so hard. It will apply very well to a two-horse railway power

Now here is what the Farmer and thrasherman wants, a Separator to go from farm to farm, to thrash grain, with more satisfaction that any other separator now in use, and why is it? Because this separator has a self regulating Blast, which prevents geain from blowing into the chaff, and also has a self regulating feeder to feed the cleaner and it has rollers and combs in the cleaner which prevents it from cloaking. Why does this machine run so light, and give so luttle trouble? Because there is less friction in the Journals, and the rakes and fan are geared so that you have no trouble with Belts broaking and slipping, causing dust to fall into the wheat. Why does it clean against the wind? Because the and slipping, causing dust to fall into the wheat. Why does it clean against the wind! Because the Is with all doubt the heat Cook Steve in market for blast has direct action on the grain and the cleaner is so well arranged that the wind has no chance to either Anthracite or Bitumicous Cook. Coil and drive the dirt into the hopper. Why is it built permanently on two wheels and the front carriage separate, ready to attach when necessar, ! Because it is more convenient in the barn without the front cararate, ready to attach when necessary! Secules it is more convenient in the barn without the front carriage. You can turn the machine or run it from place to place more easily. Why has it not got Elevators like some other machines? Because the Elevators carry the filth back alternately into the cleaner which must eventually go into the good wheat or in the chaff, and all know, that filth should be kept separate for feed, &c, we might us well keep shoveling the Tailings from under our hand fan into the hopper and expect to get the grain clean. Why is this separator more cleanly and satisfactory to work about than others? Because the Fan and Trunk Sides are closed up to prevent the wheat chaff and/dust from coming out and scattering over the floor, causing waist and giving much trouble with dirt and sore eyes, &c. Why do Thrashermen get more work with these separators than they do with others! Because this separator has all these advantages and many more, which makes it a separator suitable and a paying one for all farmers and Thrashermen that have grain to thrash, whilst in most cases farmers must suit themselves to the machine, because the machine will not suit itself to the former this is the cheapest, most durable, reliable, simple and most agreeable to work about; and the only, sep arator that will clean and bug the grain sufficiently clean for market under all circumstances.

Farmers can rest assured that this machine is no humbug, and judging from the high recommenda tion of farmers that are using them, we must come to the conclusion that it is the very Machine that far mers want and will have as soon as they have an opportunity to appreciate and attest its merita for which we hope they will give us an opportunity, as we are willing to be responsible if it does not perform as represented in this Circular. A reduction of 2 per cent. on all orders handed in on or before the first of April, 1868.

Shop Prices of Machines range from \$215, to \$540. For We warrant the machines to be as above represented; also against any reasonable defects of material workmanship, &c. DANIEL GEISER Proprietor.

Geiser, Price & Co., Manufactures. WAYNESBORO', FRANKLIN CO, PA. Null's Pat. Post Boring Machine.

PATENTED MARCH 24, 1868.

STATE AND COUNTY RIGHTS FOR SALE.

A series of trials of this machine has convince: the inventor and all persons who have witnessed its operations that it is superior to any other in use in the following particulars:

> LABOR SAVING QUALITIES— EASE OF OPERATION— SIMPLICITY OF CONSTRUCTION.

This machine is constructed so as to be operated either by hand, horse, water or steam power. By hand 25 to 30 posts can be bored per day; by one-horse power from 100 to 150 per day; by two-horse power 200 per day, and by water or steam power from 200 to 300 per day. It is also a self feeder. The subscriber is now prepared to dispose of State and County Rights for the above valuable in vention.
