Improved Thrashing Machine!

Daniel Geiser.

J. F. Oller. Josiah Fahrney.

Farmers will please look at the great advantage in Thrashing

GEISERS' PATENT SELF-REGULATING GRAIN SEPARATOR, CLEANER AND BAGGER.

With the latest Improved Triple Geared Horse Power, a driven either by Gear or Belt

No. 1 is a eight-horse power, with cast iron thresher frame and wrought fron and wood cylinder, sixteen inches in diameter and thirty three inches long. Trunk has ten inch rake crank and seven rakes is thirty-five inches wide, and delivers the straw on the second rake, these carry the straw out on their tops, and deliver it on the stacker, which will deliver about thirty-five feet beyond the feeder, on a stack fifteen to eighteen feet high, and can be easily managed to carry the chaff with the straw, or deliver it in a separate place. The crunk and fan sides being closed, to confine the straw and chaff, remedies all difficulties in cleaning grain against wiver weather. It bags the grain by reasonable management; sufciently clean for market, and its capacity, under ordinary circumstances, is from twenty to forty bush-els per hour, using eight horses and the same number of hands; but to force the work under favorable circumstance, it will thresh from forty to fifty bushels per hour, and with more ease and agreeableness to hands than any other machine now in common use.

The No. 2 Machine, fully represented in the above cut, is particularly adapted to the tarmer's use; in intended to apply to any common lever or railway power; weighs 1,300 pounds; has an iron-threshers-trane, and cylinder, 123 inches in diameter and 28 inches long; delivers the clean grain in bags, or if desired, in a half bushel. It delivers the straw fifteen feet from the feeder, or if desired, can deliver the straw and chaff together; will throsh and clean, in good grain, ready for market, from 100 to 175 bushels of wheat, or from 300 to 500 bushels of oats per day, using four or six horses, and the same number of nands; but to force the work, under most favorable circumstances, good grain, &c., will thresh and clean considerably more. The Machine will thresh and clean all kinds of grain generally threshed, with the common-machine, and requires no more horse power, but in many cases does not run so hard. It will

apply very well to a two-horse railway power

Now here is what the Farmer and thrasherman wants, a Separator to go from farm to farm, to thrash grain, with more satisfaction than any other separator now in use, and why is it? Because this separator has a self regulating Blast, which prevents grain from blowing into the chaff, and also has a self regulating feeder to feed the cleaner and it has rollers and combs in the cleaner which prevents it from chosking. Why does this michine run so light, and give so little trouble? Because there is less friction in the Journals, and the rikes and fine are geared so that you have no trouble with Belts breaking and slipping, causing dust to fall into the wheat. Why does it clean against the wind? Because the blast has direct action on the grain and the cleaner is so well arranged that the wind has no chance to drive the dirt into the hopper. Why is it built permanently on two wheels and the front carriage separate, ready to attach when necessary? Because it is more convenient in the barn without the front carriage. You can turn the machine or run it from place to place more easily. Why has it not got Elevators like some other machines? Because the Elevators carry—the filth back alternately into the cleaner which must eventually go into the good wheat or in the chaff, and all know, that fifth should be kept separate for feed, &c, we might as well keep shoveling the Tailings from under our hand fan into the hopper and expect to get the grain clean. Why is this separator more cleanly and satisfactory to work about than others? Because the Fan and Trunk Sides are closed up to prevent the wheat chaff and dust from coming out and cattering over the floor, causing waist and giving much trouble with dirt and sore eyes, &c. Why do Thrashermen get more work with these separators than they do with others? Be cause this separator has all these advantages and many more, which makes it a separator suitable and a paying one for all farmers and Phrashermen that have grain to thrash, whilst in most cases farmers must suit themselves to the machine, because the machine will not suit itself to the farmer. In short this is the cheapest, most durable, reliable, simple and most agreeable to work about; and the only, separator-that-will clean and hig the grain sufficiently clean for market under all circumstances. Farmers can rest assured that this machine is no humbug, and judging from the high recommenda-tion of farmers that are using them, we must come to the conclusion that it is the very Machine that far-

mers want and will have as soon as they have an opportunity to appreciate and attest its merits, for which we hope they will give us an opportunity, as we are willing to be responsible if it does not perform as represented in this Circular. A reduction of 2 per cent. on all orders handed in on or before the first of April, 1868. Shop Prices of Machines range from \$215, to \$540.

We warrant the machines to be as above represented; also against any reasonable defects of maturia
