REID'S,

Newest, Best, Cheapest Improved Thrashing Machine!

Daniel Gelser. B. E. Price.

Josiah Fahrney.

Farmers will please look at the great advantage in Thrashing

## GEISERS' PATENT OTHING, SELF-REGULATING GRAIN SEPARATOR,

CLEANER AND BAGGER.

With the latest Improved Triple Geared Horse Power, driven either by Gear or Belt

No. 1 is a eight-horse power, with cast iron thresher frame and wrought iron and wood cylinder, six-No. I is a eight-horse power, with cast iron thresher frame and wrought iron and wood cylinder, sixteen inches in diameter and thirty three inches long. Trunk has ten inch rake crank and seven rakes is thirty-five inches wide, and delivers the straw on the second rake, these carry the straw out on their tops, and deliver it in the stacker, which will deliver about thirty-five feet beyond the teeder, on a stack fifteen to eighteen feet high, and can be easily managed to carry the chaff with the straw, or deliver it titien to eigneen teet uigh, and the state and the state and the straw and chall, remedies all difficulties in cleaning grain against what weather. It bass the grain by reasonable management, sufficiently clean for market, and its capacity, under ordinary circumstances, is from twenty to torty bushels per hour, using eight horses and the same number-of-hands; but to force the work under favorable circumstance, it will thresh from forty to diffy bushels per hour, and with more ease and agreeablenose hands than any other machine now it, common use.

The No. 2 Machine, fully represented in the above cut, is particularly adapted to the farmer's use; in The No. 2 machine, unity represented in the above cut, is paracturary acapted to the farmer's use; in intended to apply to any common reveror rank ty power; weighs 1,300 pounds; has an iron thresters frame, and cylinder, 123 inches in diameter a d 48 inches tong; delivers the clean grain in bags, or if desired, in a half bushel. It delives the straw fifteen feet from the feeder, or if desired, can deliver the staw and chaff together, will thresh and clean, in good grain, ready for market, from 100 to 175 bushels of wheat, or troin 300 to 500 busnels of outs per day, using four or six horses, and the same number of pands; but to force the work, under most favorable circumstances, zood grain, &c., will thresh and clean considerably more. The Michine will threah and clean all kinds of grain generally threshed with the common muchine, and requires no more norse power, but in many cases does not run so hard. It will

apply very well-to-a-two-horse-ratiway-power.

Now here is what the Farmer and three serm in wants, a Separator to go from farm to farm, to thrash grain, with more satisfaction than any other separator now in use, in I why is it? Because, this separator has a self-regulating Blast, which prevents grain from blowing into the chaff, and also has a self-regulating Blast, which prevents grain from blowing into the chaff, and also has a self-regulating Blast, which prevents grain from blowing into the chaff, and also has a self-regulating Blast, which prevents grain from blowing into the chaff, and also has a self-regulating Blast, which prevents grain from blowing into the chaff, and also has a self-regulating Blast, which prevents grain from blowing into the chaff, and also has a self-regulation. ulating feeder to feed the cleaner and it has rollers and comes in the cleaner which prevents it from cheaking. Why does this machine ran so ught, and give so little trouble? Because there is less friction in the Journals, and the rakes and fan are geared so that you have no trouble with Belts breaking and slipping, causing dust to full into the wheat. Why does it clean against the wind? Because the blast has direct action on the grain and the cleaner is so well arranged that the wind has no chance to blast has direct action on the grain and the cleaner is so well arranged that the wind has no chance to drive the dirt into the hopper. Why is it built perminently on two wheels and the front carriage separate, ready to attach when necessar.? Because it is more convenient in the barn without the front carriage. You can turn the machine-or run it from place to place more easily. Why has it not got Elevators like some other michines? Because the Elevators carry the fifth back alternately into the cleaner which must eventually go into the good wheat or in the easily and all know that fifth should be kept separate for feed, &c., we might as well keep shoveing the l'allings from under our hof fan into the hopper out expect to get the grain clean. Why is this senar for more cleanly and satisf clear to work a hopper and expect to get the grain clean. Why is this separator more cleanly and satisf ctory to work about than others? Because the Fan and Trunk sides are closed up to prevent the wheat chaff and dust hout than others? Because the Fan and Trunk Sides are closed up to prevent the wheat chaff and dust from coming out and scattering over the floor, causing waist and giving much trouble with often and sore eyes, &c. Why do Thrushermen get more work with these separators than they do with others? Be cause this separator has all these advantages and many more, which makes it a separator suitable and a paying one for all farmers and Thrushermen that have grain to thrush, writest in most cases farmers must suit themselves to the machine, because the machine will not suit uself to the farmer—In short this is the cheapest, most durable, reliable, sample and most agreeable to work about and the only separator that will clean and hour they are sufficiently clean for market wider all disconnected.

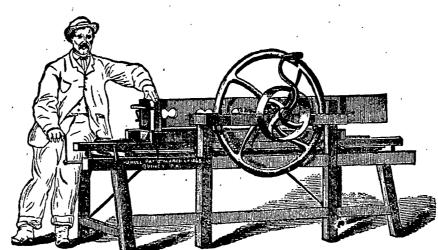

arator that will clean and bag the grain sufficiently clean for market under all circumstances.

Farmers can rest assured that this machine is no an abut, and judging from the high recommenda frarmers can rest assured that this machine is no nu noug, and judging from the high recommenda-tion of farmers that are using them, we must come to the conclusion that it is the very Machine that far-mers want and will have as soon as they have an opportunity to appreciate and attest its merits, for which we hope they will give us an opportunity, as we are willing to be responsible if it does not perform

A reduction of 2 per cent. on all orders handed in on or before the first of \pril, 1868. Shop Prices of Machines range from \$215, to \$540. We warrant the machines to be as above represented; also against any reasonable defects of materia

"Dr. P. Fahrney's celebrated Blood Searcher or Fanacca," is a medicine that we can recommend to to those who are affilted, having used it in our own family and furnished our friends with the article; we can, therefore, from experience say that it is a medicine possessing rare medicinal properties. Being a mild purgative, it is well to keep it always in the family where there are children or those subject to colds or other sickness. It is compounded from medicinal Roots, Leaves, Barks, Seeds and Berries, which are said to be entirely free from poison. We are personally acquainted with the proprietor who was our family Physician for several years, and we were at one time raised from a bed of affliction under his judicious treatment."—Christian Family Companion.

"FAHRELY'S BLOOD SEARCHER:—From our personal acquaintance with Dr. P. Fahrney, and from the reputation of the above named medicine in the community where he lives, we can cheerfully recommend it to a fair trial to all who may need a PANACEA for the physical maladies of mortality, until the great PANACEA for all diseases shall be found in the leaves of the tree of life.—Prophetic Watchman.
