For the Young.

THE BOY. A Story for Boys. About a hundred years ago, there lived in the city of Oxford, England, a boy whose name was George. He was very poor, so much so that he was compelled to clean the boots of the students at the University.

ablest and most consistent members. The youths who once sought his company, now treated him with searing contempt. Those who once considered him a young man of extraordinary abilities, thought him a reckless fanatic, and avoided his society as they would that of a worthless drunkard.

He preached in the open fields to thousands upon thousands; and the great amount of good which he did, eternity shall tell. Dear boys, do not mind the sneers of your companions.

Willie, the Runaway. One moonlight night, when all the house was still, Willie Nichols rose softly from his bed. He dressed himself quietly that he might not disturb his sister, or his little brother Bennie.

There was not a man on the vessel who would not have risked life and limb to save the little fellow had he been in danger. Eighteen months went by. They had touched here and there at different ports, and now and then they had spoken a vessel here, or there, or perhaps found still further away that they were themselves.

Agricultural.

Old Horses. This term, as applied to horses, is generally intended to convey not only the statement of their age being past marks in the mouth, but also the common impression that comparatively they are of little value, if past eight or nine years. Now, if we rightly understand it, the horse has not attained his full growth and perfection of bodily frame, until he has passed his seventh year; and until growth is attained, he is just as unfitted for extreme hard labor, as a man before arriving at full manhood.

Lock-jaw in the Horse. English papers report a late case of lock-jaw in a horse, which was cured by eight ounces of chloroform. The animal lay prostrate under the effects of the medicine for nearly four hours, when they passed off, and the malady went with them.

Value of Hay as Compared with other Milk-Producing Substances. Several French and German chemists estimate the relative value of several kinds of food for milk cows according to the following table: One hundred pounds of good hay are worth two hundred pounds of potatoes; four hundred and sixty pounds of beet-root with the leaves; three hundred and fifty pounds of Siberian cabbage; two hundred and fifty pounds of turnips with the leaves; two hundred and fifty pounds of carrots; eighty pounds of hay, clover, Spanish trefoil, or vetches; fifty pounds of oil-cake, or colza; two hundred and fifty pounds of pea-stalk and vetches; three hundred pounds of barley or oat-straw; four hundred pounds of rye or wheat-straw; twenty-five pounds of peas, beans or vetch seed; fifty pounds of oats; and five hundred pounds of green trefoil, Spanish trefoil, or vetches.

How to Make Dairy-Farming Pay. A paragraph or two from an article on this subject, in the American Stock Journal, will interest, and we hope, profit our readers.

Preparing the Ground for Orchards. Wherever grounds intended for orchards and fruit gardens, on soils that need more or less enriching, has not been prepared a year or so in advance, it will be advantageous to do so in Autumn for Spring planting.

To Pack Beef and Pork. Select for salting that part of the carcass that has the largest blood-vessels, and do not attempt to pack it until entirely free from animal heat.
