Mr. and Mrs. Elwood Flowers (Sheila Lokey), 935 West Main Street, Mount

Mr. and Mrs. Douglas Kent (Tina Iazzi), Hanover RD1, formerly of Mount Joy, a son on February 7th at Hanover General Hospital.

Insulate Your Electric Water Heater and Save!

Adding a blanket of insulation to your electric water heater is quick and easy. Inexpensive, too. About 30 minutes of your time and about \$10 worth of materials should do it.

Cut strips of insulation to wrap around your tank . . . two half-circle pieces to cover the top (do not cover temperature-pressure relief valve). Mark thermostat locations and apply duct tape to all seams.

Because insulation helps contain heat in the tank, it saves energy and money. In less than six months your extra insulation can pay for itself. After that, savings continue for years!

Granted . . . electric water heaters are factory insulated. But, when you can make yours a little more efficient simply by wrapping it in 3½ inches of ordinary household insulation . . . why not?

NOTE: These suggestions are for **electric** water heaters. If you have a gas or oil water heater, check with your fuel supplier about insulating it.

"Saving energy saves for all of us"
