The modest egg is yearly becoming more important factor in the food supply of this continent, and a more expensive one, says Good Housekeep ing. The estimated production in 1901, according to the highest authority, was 1.472.043.730 dozens of eggs-too vast a number for the most hospitable imagination to entertain all at once. The egg capacity of the many cold storage plants is estimated at 150,000, 000 dozen. Therefore, granting that all the available space in the refriger. ating houses is filled with eggs during the storage season (which is not probable), 90 percent of the egg crop of the country is consumed as it is produced. The average increase in egg production for the 10 years from 1890 to 1900 is placed at 10 percent yearly. The chances are that the next 10 year will show eater increase.

The question is being raised in Rome as to whether foreign physicians shall be allowed to practice ir Italy without an Italian diploma. A re cent writer on the subject set forth the law in regard to the matter in other countries. In Austria, he point ed out, the state examination has to be passed and the candidate is re quired to become a naturalized Aus trian subject. In England, it is said a foreign physician may practice, but he cannot sign a death certificate. Ir France the passing of all examinations is required, and the French physicians are arguing th s they have to perrvice, foreigners shall also. In Germany the state examira tions-must be passed. There is appar ntly no well-founded opposition to the measure requiring foreign physi cians to qualify in Italy, and the mat ter is rapidly coming to a head.

Not a little of the apprehension manifested over the decline of the birth rate among certain elements of the population is due to the idea that if the present possessors of wealth and culture do not increase and multiply society is to be a loser. In this as sumption we have an expression of the aristocratic theory for which there has been little justification in our his tory. In most countries and at nearly all times the class living in luxury has been less prolific than the elements which have done the real work of the world. While there are and always have been exceptions to the rule, the families which survive and increase must be regarded in the long run as the fittest, and there can be little doubt that sconer or later some member or members will demonstrate the fact. The very fact that families wax and wane, that wealth takes wings and that luxury carries sertain penalties constitutes one of the most conserva tive forces known to society. It is no tential even in a monarchy. In a re public it should be accepted not only as a matter of course, but as some thing eminently desirable. The real Americans are not dying out; no matter what the statistics as to birth in families of the highly favored may show, asserts the Chicago Chronicle The strains which deserve to endure will persist, regardless of fortune or environment, just as they always have done. It will not make much difference to the world whether they are found at any given time in hovels or

ing gate Pass out alone? -William Hurd Hillyer, in Lippincott's Magazine.

DINNER ON THE GRIP.

Captain Alexander Maher of the steam coaster Grip was hurrying along Cardiff street dockyard to his vessel, which had just completed loading for Southampton, when he was attired in yachting costume, and wearing on his cap the gilt badge of a famous south coast club.

"Captain Maher?" the stranger quer-

"That's me," the sailor retorted gruffly enough, having all the dislike of his class toward the average amateur seaman. "That's me-but I'm in

a hurry.' "So I heard," retorted the other coolly. "You were pointed out to me as master of a boat just leaving for Southampton. I want to go there at

The hint was obvious enough, but Maher did not choose to follow it up. "Take the train, then," re replied;

'passengers ain't in my line." "So I would," the young man appeared disposed to be persistent-"but I have a lot of heavy baggage here, and I wish it to accompany me to my yacht, which is lying off Cowes. If you'll take it and me, I'll make it worth your while."

The captain hesitated. The Grip possessed small accommodaton for outsiders, but a job like this meant something in the skipper's pocket.

"Well," he said, surveying the stranger again, "since you have been told who I am I reckon you've a notion what my ship is; she ain't a liner, you know, but just a ceasting tramp covered this blessed minute with coal muck that won't come off her till she starts washing herself outside Lundy.'

His new acquaintance seemed in no "That will be all right, captain," he returned, "come in here a minute and let us talk it over."

The place thus indicated was an adjacent bar, where over suitable drinks

the yachtsman continued negotiations. "There are about a dozen large wooden cases he went one, "with furnishings and my own outfit for a long West Indian cruise. I should have sent them on ahead of me but for some delay, and now if I lose sight of them heaven knows how long I may be kept waiting for them in the Solent.'

"What's your vacht's name?" demanded Mather, not quite liking this explanation.

The stranger took out his cardcase "You are a bit suspicious," he said pleasantly enough, "and I don't blame you; but we'll have everything fair and square. That is my name." He handed of a card as he spoke, and on it the same read, "E. V. Rentore, S. Y. Sea-Swift, R. Z. Y. C."

The first name was unknown to Mather, but that of the vessel happened to be familiar to him, while the last four cryptic letters he was aware represented the title of one of the most exclusive clubs in the kingdom.

"Then, sir." he said, with an obvious change of manner. "if you want me to take your things it will have to be arranged quickly. I'll be hauling out for sea in a couple of hours. If they are not too heavy and you have them alongside within that time. I might manage. But for yourself," the speaker hesitated again. "our only spare cabin is poor enough.'

The other laughed. "I've roughed it. before," he said, "and won't quarrel with the best you can give me. My man shall have the cases down within the time you say; they are not heavy and your own crane will easily swing them on board. And as to termswill 20 pounds suit you?"

The sailor gasped. He had not expected nearly so much.

"If you'll throw in the price of a new hat for myself, sir," he responded, quickly, "we'll call it a deal."

"Good!" Rentore produced his purse. "Here's half of it now, and a couple of sovereigns for yourself. There will be as much more at Southampton for you and your crew if nothing is broken."

Thus the bargain was sealed, and Mather, much elated at his good fortune-for such windfalls do not come every day in the coasting trade-made his way down to the Grip, lying close to one of the chutes. He had not been long there when a wagon appeared bearing the cases, escorted by a man

"There's the stuff." the latter grumbled to the skipper, "and what the gov'nor wanted traveling with it in a coal barge for I don't know. 'Aluf a liar tap on each. mind to give him notice, I 'ave. Is did so, and dim figures from them

Mather surveyed him scornfully: "She'll carry you, my son," he retorted sarcastically, "supposin' you don't put on that much side you make her

top-heavy." The servant scowled. "I 'ope so." you'd best see the goods are safely put away, or the gov'nor'll give you what for. See they are kept right sde up-they're all marked for that."

The skipper was too busy preparing for sea to discuss this further. He passed the instructions on to his Oar coming. How informed with joy-Presently Rentore himself clambered here funnel were different, and on board.

to carry all the cases on deck?"

"Yes, sir," answered Mather, "the to be "Jane," not "Grip." weather is fine, and they'll be safe indicated two boxes as he spoke, "we will put below."

laughed back. "One is a case of ed, the remainder of her crew batallow me to give to your hands."

he said tentatively, "when we get out. lous worth. I'll take them to my own room for safety. Is everything aboard now?"

"I told you I'd make myself comfortable." Rentire laughed at the other's amazement. "The hotel people put some of this up for me, but your cook did the rest, so sit down told; "didn't you bring the ship in and do him justice. Perkins," he here?" turned to his servant, "tell them to serve dinner."

quested, and if his handling of his knife way dismayed at this description. The less patent. Moreover, his host—them myself. Curse the smile of him or his guest, for the passenger was and his dinner!" both—saw to it that his glass was frequently replenished, so that as the cheese came on the table the skipper went under it.

"Perkins." ordered Rentore then, "get the steward to help you to take Captain Mather to his room; he does not seem well. And-ah-you might have word sent to the bridge I'll be glad if the mate will join me here; the night's fine, and I expect the boatswain can take the ship past Lundy without sinking the island.'

The passenger appeared to steward-who was present -to be also slightly touched with an after dinner manner. The mate when he came had the same impression, but, nevertheless that officer also collapsed as his superior had done, leaving Rentore still quite composed. The chief engineer, who had joined the feast at the request of the giver of it along with the mate, was simultaneously overcome.

"Most extraordinary," remarked Rentore; "never saw men so easily upset. I'm going on deck. Perkins you might see the steward gets out that case of whiskey for the men for-

ward and the stokers. On deck the passenger lit a cigar, mounted to the bridge and joined the boatswain, who had charge of it.

"I've sent a bottle or two of hard stuff forward," he said to him affably "You might go down and have your I'm sailor enough to watch her if you leave me the course.'

"Thank 'ee kindly, sir," answered the seaman, who like the rest of the crew, was biessing his stars for having given the Grip the carrying of such a benefactor. "Keep her sou'-west by west and she'll take no harm for the minute I'll be gone."

When the boatswain's cap had vanished down the ladder, Rentore turned to the hand at the wheel.

"You shouldn't be out of this, my man," he said. "Off you go and drink my health: I can keep her head straight."

He gripped the wheel and the sailor saw the compass card kept steady to the course. Then he, too disappeared and silence reigned fore and aft along the decks of the Grin.

This lasted for perhaps half an hour, then Perkins appeared upon the "They're gone under at last," he

said, in tones very different from any he had previously used. "Shall I let our lads loose?" "Yes." answered Rentore. "Tell some of them to see quickly to the fires-I can feel the old tub's speed

slackening-and send a hand here to relieve me." Perkins descended to where cases were ranged and tapped a pecu-They opened as he

darted swiftly to his bidding. The

Grip had got a fresh crew. Next morning just before daylight a small coasting steamer crept into the anchorage of St. Mary's, Scilly, and brought up close alongside the palatial vacht Boccanera, belonging to a he replied with meaning: "anyway multi millionaire which had been lying there for some days, while its owner explored the islands in accordance with intentions previously announced somewhat widely in the public prints. PROFESSION OF RIDING PIONEER

Discovered by an English Younger

Son Who Needed Allowances. That knowledge of American institutions and customs grows but slow ly in England received a pointed illustration in the arrival of a huge box of what might be termed riding tackle on a recent steamer. Friends of the young man to whom the box was consigned were puzzled for a time as to why he should receive such an extraordinary outfit of corduroy clothing, saddles, boots, and other gear of a like character, and the recipient at first was sulky and disinclined to give information. After a dealer in horse goods had taken the high-priced imported equipment off his hands at a small part of its actual value the English younger son to whom it had been sent made confession and enjoyed the joke as much as did his acquaintances It meant simply that he had run through his allowances, and as his extravagances had caused the serving of notice on him that no further advances would he made, he cast about for some plausible excuse for requesting more money. He decided that the best chance was to announce a change in his method of life, and put ting forth his best efforts to think of some occupation that his family would approve of, wrote home that he had received an offer and had de cided to become a "riding pioneer, conditional upon his family supplying the capital required for the expensive outfit necessary for a "riding pioneer" and an increase in his allowance to carry him on until his new profession

The nature of the occupation he was supposed to take up he did not explain fondly hoping that the puzzle to his relatives would bring quick returns, as "riding pioneer" sounded most respectable and adventurous. dulgent English father put his own construction on the term, however, and with visions of the son far re moved from temptation and leading a healthful out-of-door life on the frontier, shipped more kinds of English flat hunting saddles, double bridles, and fanciful leggins, with other accessories, than could be found in the average fashionable saddler's. The consignment served a purpose though other than the father intended, and for the present the young man refuses to think about the explanation that will be necessary when he goes home as to what are the duties of a of the present system. The Chicago "riding pioneer."-New York Times company has already spent several

A Wider Monroe Doctrine.

By Charles Emory Smith.

We were the world's peacemaker in China. In spite of the horrid outbreak at Peking, our Government insisted that there was not a state of war. It localized the difficulty. Who doubts that if the United States had not taken this position those powers of Europe would have seized the opportunity to make a division of China? This saved the nations from a

stupendous and doubtful issue among themselves. The United States is the world's peacemaker in the Western hemisphere. This truth was recently emphasized when we practically enforced peace between Venezuela and her European assailants. It is certain that the great powers of Europe would have stretched their arms to South America if the position of

the United States had not prevented it. The Monroe Doctrine is a peacemaker. The Monroe Doctrine as our Government applied it did not prevent coercive measures against Venezuela, but it did prevent the development of those measures into invasion, oppression or conquest. The time seems to be approaching when we must consider whether the Monroe Doctrine shall not have a broader application and whether it shall not be made in a still higher degree the peacemaker of the Western Hemisphere. Shall it be broadened to protect this continent against forcible methods of collecting claims which are not admitted among nations of equal standing elsewhere? Shall it be extended to signify that, while it does not prohibit the world's accepted methods to secure reparation for undisputed wrongs or the redress of undeniable grievances, it may prohibit the employment of force to back mere voluntary and adventurous enterprise, where all the conditions were understood, where all the hazards were known and where all the risks were discounted in excessive charge?

The Perfect Woman

By Mrs. Helme.

is safe to say that not more than one woman out of five hundred is able to walk, stand, sit, breathe, or rest correctly; by correctly I mean normally, for whatever act is performed normally is al ways correct. What is normal poise? Normal poise is natural poise, a poise of strength and confidence; an erect, natural carriage of the body over a strong base or centre. In standing, this strong base or centre should be always on the balls of the feet, of one or both feet, as the case may be

Look at a child, a young child, before it has been coddled, pampered and squeezed out of its normal state. It does not have a sunken chest, protruding

abdomen and bent knee. Look at the average woman; if compelled to stand she shifts uncomfortably from one foot to the other; if compelled to stand for a half hour, her face takes on a look almost of haggardness, caused by the weariness she is enduring. legs become trembly and she wants to sink. The law of gravity is such that it is natural for the heavier part to seek the earth, but the laws of nature are also such that it is natural for the vital part or centre to furnish the limbs of our body with sufficient strength to do our bidding without excessive fatigue. weak person, therefore, cannot be well poised. Whence comes our strength? From the air we breathe, from the food and drink taken into the stomach, and from the exercise that we take to distribute that nourishment. As strength is possible only through the medium of the vital organs, it is imperative that these organs be kept always in a condition of normal activity. It is obvious that they must not be squeezed out of place, neither must they be allowed to sag and press one upon another.-The Pilgrim.

A Man's Ideal of Work.

By William Garrott Brown.

THINK that as a matter of fact a man's ideal of work grows in his breast as Burke's ideal of society, of the social order, grew in him. There is in every man a reflection of life, a vision and a sense of life, which he has got from observation and experience. It is not constant, but grows and changes; it is never quite the same in any two human beings. There is also in every man an inner vision and sense of himself in the midst of life; of himself projected into life; of his single energy transforming somewhat, or conserving somewhat,

of that he sees. The ideal of life is due to the attractions and repulsions of life as he sees it. The idea of work is a part of the ideal of life. Neither is the result of conscious reasoning or willing. They are thurst up from deeps the reason never sounded; they summon from a height the will has never

Of necessity, the ideal of work is unattainable. Save in very rare and fortunate cases, it will not be straightened by any restraining sense of the limitations of one's strength, or correspond at all to one's actual talents and endow-Quite probably, it has taken its shape from the accidental direction of the man's first curiosity concerning life, or from the figures of men, enlarged to the eyes of inexperience, which chance may have erected on his earliest horizons. The hue and color of it may be traceable to the atmosphere of his childhood; very likely, it will have a general character of achievement or of sacrifice according to the preponderance of lights or of shadows on the landscape of his youth. In all cases, however, and at all times, it will relate itself to all of life he sees. That

Unseemly Knowledge.

By S. M. Crothers.

course, inconceivable.—The Atlantic.

E social law against "talking shop" is an indication of the very widespread opinion that the exhibition of unmitigated knowledge is unseemly, outside of business hours. When we meet for pleasure we prefer that it should be on the humanizing ground of not knowing. Nothing is so fatal to conversation as an authoritative When a man who is capable of giving it enters

"All talk dies as in a grove all song Beneath the shadow of a bird of prey. Conversation about the weather would lose all its easy charm in the presence

ible that the fear of exhibiting unusual information in a mixed company may be a survival of primitive conditions. Just as the domesticated dog will turn around on the rug before lying down, for hereditary reasons which I do not remember, so it is with civilized man. Once ignorance was universal and enforced by penalties. In the progress of the race the environment has been modified, but so strong is the influence of heredity that the Man who Knows no sooner enters the drawing-room than he is seized by guilty fears. His ancestors for having exhibited a moiety of his intelligence were executed as wizards. But perhaps the ordinary working of natural selection may account for the facts. The law of the survival of the fittest admits of no exceptions, and the fittest to give us pleasure in conversation is the sympathetic person who appears to know very little more than we do .- The Atlantic.

The Girless Telephone. An invention which promises to do

away with much profanity-expressed or implied-and any quantity of vexation is now being tried on a large scale in Chicago. It is already satistorily at work in a dozen cities with a population of 25,000 and over, and its promoters are certain of the complete success in the largest cities. It is the automatic, "secret service," girless telephone. By means of the automa tic switchboard the telephone girls at the central stations are absolutely done away with. When a number is wanted you simply turn a small dial, like that which operates the combination of a vault, to the numerals which make up the required number, in their consecutive order. Then you press a button which rings a call-bell on the other telephone, and the connection is complete. The whole operation is automatic and almost instantaneous: no one can break in and interrupt or overhear a conversation; and a person speaking cannot be cut off before he has finished. Though more than one telephone company in a city is a nuisance the adoption of an automatic switchboard would certainly go far towards remedying most of the faults

millions of dollars in the building of tunnels for its wires, and will have 10; 000 telephones in operation within the next two or three months.-Harper' Weekly.

Big Alligator in Lake Michigan.

The old tale of a Muskegon lake sea serpent has at last been substantiated, but instead of an antediluvian monster it is a huge alligator. For several years past at frequent intervals persons have sworn they have seen a strange-looking reptile in Muskegon lake. The truth came to light by the reporting of the finding of a live ten foot alligator in the open water at the foot of the outlet pipe opposite the traction and lighting company's plant. Three men i na boat started to investigate, but when four or five feet from the reptile it sank to the bottom and buried itself in the mud. It soon came to the surface In the meantime the news spread about the city, and within an hour hundreds of people lined the The water in the vicinity is n by a waste pipe which is with the power plant, and tor makes its home in the ne bottom.
