## A Washington (D. C.) Woman Em

barks in Business of Breeding Fancy Rodents for Profit.

RUNS A MOUSE FARM.

Breeding white, piebald, black, and Japanese mice is the latest household industry which is receiving attention A woman living on the northern out skirts of the city, says the Washington Post, has embarked in the business quite extensively. The mice sell wholesale at the rate of \$10 per 100, and regularly, once every week, she delivers 50 of them to the leading bird and animal dealer, who sends them out to his oustomers in this and other cities. In this way she earns \$5 every week, and \$21 and \$22 per week from the other sales of her mice. It would be hard to imagine easier money than the \$5 which she receives weekly for her of June, a solitary young stork used the proceeds are for the most part pure standing in an empty receptacle exgain. She has at her home part of a actly like a would-be benedict inspect-This is her mouse farm. It must be all right. cleaned now and then and new straw and earth put in for the mice, but aside from this her only care is to feed them cupied by the newly-wedded pair twice per day and keep their basin full Their power of wing is very fine, and of fresh water. The mice increase at such a rapid rate that by selling 50 every week she is able to keep the number down to about the original limits.

### MOODS OF THE MOON.

Indicate What the Weather Will Be -Some of the Points to Notice Before Forecasting.

A clear moon indicates frost. A dull- sking moon means rain.

If the moon looks high cold weather may be expected. If the moon looks down, weather is promised.

The new moon on her back always indicates wet weather. A double halo around the moon means very boisterous weather.

If the moon changes with the wind the east, then shall we have bad

If the moon be bright and clear when three days old, fine weather is prom-When the moon is visible in the day-

time, then we may look forward to cool When the points of the crescent of the new moon are clearly visible, frost

may be looked for. If the new moon appears with its points upward, then the month will be dry: but should the points be downward, a good deal of rain must be expected during the next three weeks.

## LIVE IN SCALDING LAKE.

Traveler Discovers Strange Species temala-Other Instances.

Marcellin Pellet, a traveler who has cently returned from Gautemala, duscribes a curious species of fish, the Paoille dorri which he found in the boilin lake of Ammatitlan, says London An swers. It passes its days literally "in continual hot water." So hot is the water of this lake, it is said, that to thrust one's hand into it means scalded fingers. Ebullition is, however, somewhat tempered, as the really boiling water rises to the surface, leaving a temperature of 35 degrees cent. at the level where the fish is found, which is even then excedingly warm for coldblooded creatures like fish.

Frank Buckland states in one of his works that the naturalist, Broussonet found by experiments that some fresh water fish would live for several days in water so hot that a human being could not keep his hand in it for a minute.

De Saussure, the Swiss scientist, dis covered living eels in the hot springs of Aix, the temperature of which averages 113 degrees Fahrenheit. Humboldt also saw living fish thrown up from a volvano in South America.

One Hundred Pounds. The British government has taken the first step toward the adoption of the decimal system of weights. The board of trade will sanction the use of a weight of 50 pounds, instead of the nt standard of 112 pounds (called a hundredweight), and 56 pounds (called half-hundredweight).

## How's This?

We offer one Hundred Dollars Reward for any case of Catarrh that sannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

The Big Birds Greet Each Other by Clapping Their Long Bills Together Noisily.

Storks are not often seen on the American continent, but are common ly found in nearly all the countries of In Holland, where they are particularly numerous and are protected by law, their nests are generally on the summit of a tall post, put up on purpose for them, on which is fixed an old cart wheel. A Dutch gentleman has one such post in his grounds within sight of his library window, but he improves on the cart wheel by having an iron framework for the reception of the nest. The first year it was put up, toward the end "dwarf cattle." The rearing of fancy to come daily and inspect this framemice involves little or no work, and work. He was seen there one day large room partitioned off, and the ing an empty house, contemplating the floor covered with straw and earth. view and wondering if the drains are

The verdict was apparently favor. able, for next season saw the nest ocon hot days they ascend in spiral circles, hardly moving their broad, black wings, till they look no bigger then flies. After the young are hatched they appear to be suspicious of one another, and unwilling to leave the nest unguarded.

Storks have no voice. noise they make is "klappering" (snapping their great red mandibles rapidly and loudly). Thus they greet one another, generally by throwing back the head until the upper mandible rests on the back, but occasionally "klappering" is performed with the head and bill in the former position.

ROBBER BEES DESPOIL HIVES.

Organize Raids to Descend Upon Their More Industrious Neighbors for Winter's Supply of Honey.

To the person who knows nothing about bees they represent the supreme type of industry, says the London Chronicle. But even the bee commu nities are disturbed by those of their own kind who break through and steal. Robber bees are always a source of anxiety to beekeepers, and in the autumn the marauders seem particularly active.

Having gathered no honey, or, at any rate, an insufficient supply for themselves, they descend upon a hive, Mil its industrious occupants and carry off the golden treasure in an astonishingly short space of time. We know of a recent instance in which the attack was developed and the home bees killed in a couple of hours. Sometimes a hive will attack neighboring hive. In such cases the old straw "skip" was better than the modern arrangement, for a knife thrust through the top would break the comb and set the honey free, at which the thieves would instantly return to seal up their own store. It is not primarily in their industry that bees are

## BRAIN VERSUS BRAWN.

Chicago Professor Takes Issue with Those Who Talk About Race Suicide-His Views.

Prof. Wilbur Jackson, dean of the school of education, Chicago university, believes that quality of population more important than quantity, says the St. Louis Post-Dispatch.

In a recent address he said: "Tha highest evolution is in quality, not quantity. I am not particularly disturbed by the hysteria of our strenuous friends regarding race suicide. In the course of evolution I believe that the race has passed beyond the stage

of the rabbit and the rat." The good sense of this is in marked contrast to much of the rhetoric on the

When the country is new and sparsely settled brawn is wanted in large quantitles to fell forests, clear land for agriculture and expel the wild beasts of the wilderness. When the country fills up and the problems of society press for solution brain of good quality is most

in request. The problems of civilization are complicated and intellect of rare quality is needed. If quantity is not so much in evidence in families, we have reason to hope that quality is not absent.
