MARKS LEFT BY CIVIL WAR.

Trip Through Country Affected by Rebellion Recalls Many Exciting Incidents.

The great battle fields of the South do

not, as a rule, lie along the railwaya This is especially true of the Wilderness, that bloody scope of country where Grant and Lee contended for the mastery in the eventful spring of 1864, writes Thomas C. Harbaugh, in Four-Track News. A jaunt through this region today is both pleasant and exciting, for the battle fields there remain just as the armies left them, torn by shot and shell and, here and there, marked by tablets and monuments appropriately inscribed.

It is a pleasant ride by rail from Washington to quaint old Fredericksburg on the Kappahannock, where Burnside, one December day, left 12,000 of his men before the impregnable confederate en-trenchments on Mayre's Heights. Fredericksburg, with its narrow streets, its shot-torn houses, its great national and onfederate cemeteries, and the home and monument of the mother of Washfagton, interests one from start to finish. The war left its mark there, and the horrid autograph of Mars will long remain visible on the old city.

Ages of Married Couples.

A curious correlation between the ages of husband and wife appears to have been established in the course of the recent investigation of the inheritance of physical qualities by Prof. old home. A Pennsylvania-bred wom-Karl Pearson. Prof. Pearson's results, published in Biometrika, may be briefly spring, said she wished that she had summarized: "These data have shown that there is a very definite correlation ington. Amid all the luxuriance of that between the degrees of longevity of husband and wife. Things take place as if by the bushel and cherries by the ton, men destined to live to old age, marry women of similar vitality, while shortfived men generally marry short-lived women. There has been an unconscious selection from the point of view of gen eral vitality. This follows clearly from the study of the age of decease of a great number of couples, taken from graveyard inscriptions." The influence of grief upon the longevity of the surviving many of the common garden flowers partner is not taken into account.

MILTON GROVE.

serious to be treated by the **right** method, and the right method is the use of the best cough cure, which is

Kemp's Balsam

This famous preparation cures coughs, colds, bronchitis, grip and consumption in its first stages. Irritation of the throat and bron-chial tubes is immediately removed by the use of Kemp's Balsam. Sold by all dealers at 25c. and 5oc.

PETRIFIED MILK IN AUSTRIA.

Is Made Into Knife Handles, Pipes and Billiard Balls-Proof Against Fire.

According to the ald adage, "there is nothing new under the sun," but petrified milk, if not new, is probably unknown to most people. Skimmed milk | toward the spine shortens the anteis what is used in making this "milkstone," as it is called. By a chemical process the casein is precipitated and the yellowish-brown powder thus obtained is mixed with formaline, forming a hornlike substance which is the "milk-stone." This substance, with various admixtures, forms a substitute for horn, turtle-shell, ivory, celluloid, marble, amber and hard rubber. Handles for knives and forks, paper cutters, crayons, pipes, cigarholders, seals, marble, stone ornaments and billiard balls are now made of skimmed milk. The insolubility of galalith, its easy working elasticity and proof against fire make it very desirable. Already 20,000 quarts

of skimmed milk are daily used for the

purpose in Austria. Migration of the Goldenrod.

The Pacific slope has flowers of its own, but eastern people there sometimes long for even the weeds of their some goldenrod at her home in Washwestern state, where they raise roses length. she missed the yellow plume of the wayside weed of the other side of the Rocky mountains. So when the frost was out of the ground her host dug up a clump of goldenrod roots and sent them to her, and now they are sprouting near the shore of Puget sound, the first plant of the kind in that part of the

The Koreans are more like the Chinese than the Japanese, and they used to hate both the Japs and the Russians with equal cordiality, reserving whatever affection they possessed for

"Don't imagine you stoop-shouldered because you a

ing old," said a Chicago physician to a friend recently. "Old people do not stoop because they are old, but they get old because they stoop. The stiffening of the tissues, which is the sign and accompaniment of age, is warded of by exercise. Self-indulgence in eating and in drinking is the sure road to senility.

"I have often been surprised and gratified to find that regulated movements of the neck and upper truncal muscles, employed for the purpose of accomplishing something else, resulted In a conspicuous improvement in hearing, in vision, in cerebration and, as a consequence, in betterment in cerebral

circulation, also in sleep. Persons who habitually maintain an erect position in standing or sitting are stronger than those who slouch. A person who stoops and allows the shoulders to sag down and forward and the ribs to fall back posterior diameter of the thorax anywhere from two to five inches. The lungs, heart, great vessels and other important structures in the thorax cannot live, move and have their proper being under such circumstances." Wherefore, the proper thing for persons who are not so young as once they were is to brace up, dress young

and feel young. Sitting "hunched up" over a fire won't do. NOVEL CHURCH ORNAMENTS

Scythes Form Odd Decoration for Chapel Interior at St. Mary's in England.

At first sight the scythe is a strange ornament for a church, but there is nothing incongruous in these curious agricultural implements as seen in the parish church of St. Mary's, at Horncastle, in Lincolnshire, says the Chris-tian Age. Thirteen of these blades are nailed above the door in the north chapel. At one time the blades numbered 40 or 50, but owing to rust and decay many of them have been lost.

Each of the scythes is about a yard in The general belief is that these blades were placed in the church in commemoration of the zeal of peasants who wielded them in defense of their faith in the rebellion known as "Tha Pilgrimage of Grace," which had its rise at Louth in 1536. When the people saw the ruins of their churches and abbeys they rose in revolt, and, arming emselves with the instruments of husbandry, such as the scythes, they went forth to encounter the enemy They were beaten and dispersed, but in the eyes of their countrymen they were heroes, and the rude implements with which they fought were deemed wor-

they of an abiding place in the old church where the peasants had wor-

large, but in the medical field it is al ready fuirly extensive. In the work ing of X-rays and in the marvelous re sults achieved in the treatment of can-

are made of firm, hard twisted warps, and long, strong filling, to resist cold and storm-made for horse comfort and owners profit. Wherever a horse needs covering-in stable, street, or race track -no blanket equals the extra-warm, close-woven, 5A HORSE BLANKET.

Your local dealer buys the longwearing 5A Blankets direct from the factory, and can therefore sell them cheaper than dealers can sell inferior blankets, purchased through jobbers at high prices.

Buy a 5A SQUARE BLANKET for street use. Buy a 5A BIAS GIRTH BLANKET for stable. Always look for the 5A Stay under Straps. Made by WM. AYRES & SONS. Philadelphia, Pa.

Stockholders'Inspector Reports

on the Progress of the

International Lumber and Development Company

The Stockholders of this Company recently elected one of The Stockholders of this Company recently elected one of their number, Dr. Andrew S. Stayer, of Altoona, Pa., to go as their representative, to their Mexican plantation and make a full report on its development. This report is now ready. Dr. Strayer says, in part :

TO THE STOCKHOLDERS OF THE INTERNATIONAL LUMBER AND DEVELOPMENT COMPANY :

AND DEVELOPMENT COMPANY: I believe that the dividends on the whole capital stock of this Company, as guaranteed, can be paid for years to come from the timber now standing in the forest on this estate. No one not having ridden through these forests and viewed the timber can form the least conception of the amount there is there and in computing the value of this fabulous amount of timber you must take into consideration that it is of much more value than woods used for the same purpose grown in the temperate climate. If there were no other source from which to draw dividends, I would feel perfectly safe in saying to you that you need have no fear on this subject, as the guaranteed dividends can be paid from this source alone, but there are many other sources of dividends. Principally among them is

HENIQUEN

There is no doubt about the value of this product. I have carefully studied this subject and cannot find any reports or estimates that give the net yield per acre at less than \$50 or \$60, except in the literature of the Company while all the estimates given me verbally in Yucatan and Campeche place the figures much higher. Ten thousand acres planted to heniquen would produce a ten per cent dividend; 20,000 acres planted to heniquen would produce a 20 per cent. dividend, and so on. (Preparations made to rapidly plant 12,000 acres. Over one million plants growing and six millions contracted for.)

LIVE STOCK

Besids wood and heniquen, large amounts of money will be realized from the sale of cattle, horses, mules and other live stock grown on the festate. The expense of growing these is limited to the wages of a few cowboys who look after them

RUBBER, ETC.

RUDDER, EIU. There must be at least in the neighbor hood of 600,000 wild rubber trees, of all sizes and ages, large numbers of which are now ready for tapping. Later on, if the same plan is pursued in extending the planting of rubber from year to year and the value of rubber keeps on increasing as it has in the past few years, thousands of dollârs will be turned into the treasury from this source, besides the large profits to be derived from bananas, dyewood, the gathering of chicle from the profits derived from selling goods from the Company's stores to the thousands of people who will reside on this plantation. Be sides those above mentioned, there are smaller amounts of money coming in from many other sources. The system adouted on the plantation is such that really nothing is touched or handled that does not produce a profit. In presenting to you this report of the first inspection, I feel that my descriptions are inadequate and that I have not done justice to this great property, but have the intense satistaction of knowing that I have been able to bring to you to bring to you a life income. I regret that my fellow-stockholders could not have been present to see for themselves what I have seen. June 22, 1906. (Signed.) ANDREWS. STAYER
