

Here's a Stable Blanket that Stays On

This is no empty claim, but an actual fact. Rubbing and pulling in the stable can't misplace a 5A Bias Girth Blanket—once it is on the horse's back and the girths clasped. Like all other

5A HORSE BLANKETS

the "Bias Girth" is worth more than it costs. Extra material, good weaving, and careful cutting, stitching and finishing give solid wearing quality to every 5A "Bias Girth" Blanket.

No similar article on the horse-goods market gives such genuine horse protection. Your dealer buys these and other 5A blankets from the factory direct and sells you at a corresponding saving. Ask him for 5A blankets.

For street wear, use a 5A Square Blanket. Be sure to see the 5A Stay under Strap. WM. AYRES & SONS, Philadelphia, Pa.

PENNSYLVANIA RAILROAD Personally-Conducted Excursions

VALUABLE INFORMATION FOR OUR SUBURBAN FRIENDS

How to Cure Chicken Pox—The Profits in Raising Hogs—The Planting of Trees in an Orchard—The Feed During the Molting Season—Cowpeas.

It is interesting to know just how the cowpea crop benefits the soil upon which it grows and increases its productive capacity. In the first place it does so by increasing the supply of nitrogen which it transfers from the air to the soil by means of bacteria which live on the roots of the plant. This added supply of nitrogen serves to increase the growth of the plants as well as enriching the soil during its growth.

We are in the molting season. Bran fed twice a day with skim milk will help. It is best to increase the amount of bran to one eighth of a bushel and seven eighths of millet, spoiled alfalfa or Kaffir Seed moistened with skim milk is a good feed to give on alternate days. If fresh green food must be given when the birds are penned, and one meal should be mainly whole wheat. A more uniform molt is obtained when the fowls are confined in small pens each accommodating six or eight; but, of course, it is only the fancy fellows who can potter around in this way. Each would then secure a proper share of food—a thing especially important at this time to hurry up the molt.

One of the results to be gained by reducing the head of a tree or cutting back the limbs when it is transplanted is that it will afford less surface to catch the wind, and the tree will not be thrown down or bent over before the roots will get well established in the soil. In a large proportion of apple orchards, either old or young, one can tell at a glance the direction from which come the most prevalent high winds, as all the trees lean away from it. It is not possible to entirely prevent this where there is no hill or wood to act as a windbreak to protect them, but by planting them leaning a little toward and wind against, and keeping the tops well pruned the trouble can be lessened so that it will not amount to a deformity in the orchard.

There are two directions from which profits may come in raising hogs. The first of these, at least the first in the minds of most men, arises from high prices at selling time. The second, which is really the most important, is in more economical methods of production.

Observation of a number of farms leads to the belief that not half the farmers who are engaged in raising hogs know half as much as they ought to about how to raise them cheaply. There is the example of a farmer who, having little inclination to lay out money for feed, turned his pigs on to grass and let them hustle for themselves. As soon as oats were harvested he began to feed them, and he had a fine crop of hogs. These pigs were perhaps a little "leggy." They did not show deep bodied hog form, but they did show strong muscle and bone development, and when finishing time had come they had put on flesh more rapidly than any crop of pigs this farmer ever had on his place. They also developed bony structures that carried them to market in good shape.

Undoubtedly pigs grown in this manner may be marketed at a much less percentage of cost than in any other way.

Chicken pox, which is a very infectious disease, usually appears among the younger chicks first, later spreading to the older ones. When the first symptoms are discovered among the flock the first thing to do is to provide a separate house for those chickens affected. In other words, to isolate them. If they infect the henhouse from which they have been taken thoroughly with coal tar, after which disinfect the house which they have been put into. It is necessary to use the disinfectant upon the fowls as well as upon the house.

Wash the head and face of each one with a strong soap made by using soft water and carbolic soap. Do a thorough job so as to soften the scales on the face. After this anoint the head and face with carbolic vaseline. Feed the whole flock a mash in which a teaspoonful of epsom salts has been dissolved for each six hens in the flock and repeat this dose once a week as long as the disease appears in the flock. Fowls which have been infected will show the disease after the separation has been made, but as fast as it appears take the sick fowls from the flock and put them in the hospital. If the disease is not cured by the time done and sick fowls are carefully attended to the disease will be conquered in two or three weeks. Be careful about carrying infection from the hospital to the house where the well fowls are being kept.

DEAFNESS CANNOT BE CURED by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by the use of the Deafness Cure. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed, you have a rumbling sound or imperfect hearing, and when this inflammation is not removed, your hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous surfaces. We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars free. F. J. CHENEY & CO., Toledo, O. Sold by Druggists & Take Hall's Family Pills for constipation.

Popular Lecture in the Evangelical Church In compliance with the request of members and friends to deliver his lecture: "Stop Grumbling and Laugh a Little." Rev. Egge has fixed Thursday evening, Oct. 6th, as the time. The lecture will be all that the subject implies and while you may have to realize that it is full of wholesome truth and helpful thought expressed in a cheerful, happy way. The Lecture Committee will arrange to accommodate the people with tickets and all are asked to patronize the project.

Talk is Cheap When you can get a telephone in your house for \$12.00 a year. Call up the Columbia Telephone Company and they will tell you all about it. Subscribe for the Bulletin.

AFTER SUFFERING FOR YEARS

Cured by Lydia E. Pinkham's Vegetable Compound

Brookville, Ohio.—"I was irregular and extremely nervous. A neighbor recommended Lydia E. Pinkham's Vegetable Compound to me and I have become regular and my nerves are much better."—Mrs. K. KINNON, Brookville, Ohio. Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs, contains no narcotic or harmful drugs, and to-day holds the record for the largest number of actual cures of female diseases we know of, and thousands of voluntary testimonials are on file in the Pinkham laboratory at Lynn, Mass., from women who have been cured of almost every form of female complaints, inflammation, ulceration, displacements, fibroid tumors, irregularities, periodic pains, backache, indigestion and nervous prostration. Every suffering woman owes it to herself to give Lydia E. Pinkham's Vegetable Compound a trial.

If you want special advice write Mrs. Pinkham, Lynn, Mass., for it is free and always helpful.

The Home Paper How many country newspapers, daily or weekly, are there that could live six months if they had to depend upon the income derived from subscriptions? Very few of them could make expenses. They must depend upon their advertising and jobwork. Yet some people are unreasonable enough to complain that there are too many advertisements in the paper and others care so little for the welfare of the local papers as to send their job printing out of town.

What is a local newspaper? It is a board of trade, a trumpet of the town's advantages, a history. It is a policeman, a chaperon, a defender of your rights and a board of health. It is an honest advisor if in the hands of an honest man. It warns you against frauds. It rejoices with you when you are glad and mourns with you when you need a comforter. It is the guardian angel of your moral, intellectual and physical health. It sticks closer than a brother. Do you help to support your home newspaper?—Danville (Pa.) News.

Mildew and Red Spiders A Schuylkill county business man writes Professor Surface, State Zoologist, in reference to the condition of mildew on his rambling rose vines, and which causes the leaves to curl. He requested a remedy. The Prof. replied as follows: "You can prevent mildew by spraying with boiled Lime-Sulfur Wash, or with sulfur alone stirred into water or by dusting with sulfur in the morning when the leaves are damp with dew, or you can spray with an ounce of sulphite of potassium, or an ounce of sulphite of soda, dissolved in each gallon of water. It seems that sulfur, or the sulfur compounds, in any form, are practical species for mildew. With mildew, red mites or red spiders are almost always found, and sniffer either in liquid or dry form, or in compounds is one of the best remedies for the red mites. Thus the application of sulfur, either dry or stirred in water, or in some of its chemical compounds dissolved in water, proves to be an efficient remedy for both mildew and red spiders."

For Sale Two-Cylinder Maxwell Runabout and 2 Cylinder Buick, five passenger Touring Car, both in good condition with tops. LANCASTER AUTO. CO., sep21-2t 215 N. Prince St., Lanc. Pa.

For Sale The following articles of the Elkhorn Laundry, Mount Joy, Pa. Upright steam boiler, about 8 horse power, with new steam gauge, \$20.00. Delivery wagon and harness, \$20.00. Combined bosom and hand ironer, \$8.00. Band ironer, \$4.00. Fan, \$3.00. Stationary wash tub, \$1.50. Heater, \$1.25. Dry room stove, \$1.00. Pulleys, shafting, hangers and belting, \$20.00. Any of these articles will be sold separately. Address: RALPH H. SHEAFFER, 936 Muhlenberg St., Reading, Pa.

Pure Spring Water ICE IN ANY QUANTITY at Very Moderate Charges. Don't fail to see us before placing your order this year. J. N. Stauffer & Bro. Mount Joy, Penna.

The Printer's Dollars The printer's dollars—where are they? A dollar here and a dollar there, scattered over numerous small towns all over the country, miles apart—how shall they be gathered together? Come home, ye truant to your father's house—ye're wanted! Come here in single file, by column or platoon—so that the printer may send you forth again, to battle for him and vindicate his credit. Reader, if you discover a stray dollar around your premises, carefully send him home for he is ours. We would ask you to search diligently to be sure you haven't a couple of printer's dollars sticking about your clothes.

Best Time to Plant Trees Following information given by Prof. H. A. Surface, State Zoologist, Harrisburg, to a Supreme Court Justice, will be of interest to all who intend to plant fruit trees:

"I can say that I am certain from experience, observation and study, that it is best to plant the pome fruits or apple, pear and quince in the fall of the year. This, of course should be done late in the fall, and care should be taken to use trees that are matured in the nursery rather than those from which the leaves had been stripped while yet green and thrifty. I would prefer trees from which the leaves dropped naturally.

"The stone fruits are best planted in the early spring, if the soil is in proper condition and the planting well done. By this I mean, that one should avoid planting when the soil is so wet that it will cake or pack around the roots of trees, which is liable to be the result of very early spring planting. "If trees be kept dormant when in storage, they can be planted very late in the spring, but the chief objection to this is, their lack of growth during the shortened summer. In the fall one has more time, the soil is in better condition, and planting can generally be done with more care than in the spring time. The date of spring planting does not depend so much upon the condition of other trees in the vicinity, or plants of the spring, as upon the condition of the trees planted as to dormancy. It should be a truly dormant tree, or, in other words, one in which growth has not started."

The Wintering of Bees State Zoologist, H. A. Surface, replies as follows to a beekeeper, who wrote to him concerning his colonies of bees:

"Your hive of bees which makes comb but does not fill it with honey, needs to be fed. They, of course, find it necessary to make the comb before they can store honey. They made the comb about the time of the honey flow there. You will not be able to carry them through the winter if you do not feed them. Your cheapest and best food is white sugar dissolved in water. If you wish to stimulate bees to increase in numbers, and make a strong colony of young bees for wintering well, it is advisable to use two parts of water and one part of sugar, and feed about one-half pint of this to the bees each evening, continuing this for a month. This will give an artificial nectar flow, which will make the bees increase rapidly.

"If your colony is strong, and you merely want to feed them for winter stores, it is sufficient to use equal parts of water and sugar, and give them any amount you desire at any one time. When they have taken up enough to make the total weight of their stores about thirty pounds, they will have enough for the winter. This is called feeding for winter stores, and where so much is fed at once it does not build up a strong colony like feeding for increase or stimulation does. If you feed slowly to stimulate the increase of bees, you should be sure that they have at least thirty pounds in the hive when the cold weather sets in and the bees are ready for winter. "The sugar can be dissolved in hot water, and the syrup allowed to cool before feeding. It should not be fed hot, as this will injure the bees.

"It will be all right to delay your feeding for stores until about the time of the first snow which kills the blossoms, or even after that, as there is a possibility that the fall flowers may furnish enough nectar to carry the bees through the winter."

The Lancaster General Hospital Picturesquely placed upon a beautiful highway of Lancaster stands one of the monuments of the forethought and liberality of our grand county and city—the Lancaster General Hospital. Every citizen of this community is doubtless familiar with it and every visitor to our midst should have a view of it. Its location upon North Lime Street between James and Frederick upon a half block of terraced ground is ideal for its purposes. The building, which is the noise of trains and traffic is not far from the heart of the living, pulsating city with its trains and trolleys. Two wings with rooms and wards for patients are connected by a main administration building. Yet such wing may be shut off completely if need be by fire-proof doors. Every work facility for prompt and effective service that could be provided has been supplied and the new south wing has just been finished and in part furnished, by the interest and generosity of former patients and friends of the Hospital, also the endowment and furnishing is not yet complete. The central or administration building contains the office and reception room. The completion of the (south or) Women's Wing of the Hospital has just been accomplished, largely through the work of the goodly women of both county and city. Some of the rooms and sun-parlors have been endowed or equipped for work by Auxiliaries, Societies and thoughtful persons, but others remain to be provided for by the generous friends of humanity, although the Board of Directors trust that the liberal hearts of our people will aid in such a splendid work, for the good of all have made themselves responsible for the entire furnishing in a uniform manner. The Women's Wing is furnished with arrangements for the treatment of rheumatic and other allied ailments with Turkish bath outfit in the basement. The main floor is designed for the medical and the second floor for the surgical cases among the women and children. The upper most floor is designed for the maternity cases and the little children. The whole institution will well repay a visit on Oct. 3rd when the wing will be opened for use.

PIMPLES, BLACKHEADS, ECZEMA Etc., QUICKLY CURED.

"It is astonishing," remarked a well known authority on diseases of the skin, how such a large number of people especially ladies, are by attractively written advertisements, induced to purchase some one of the many so-called Beauty Creams now on the market, not knowing of course that they mostly contain oily or greasy substances that clog the pores of the skin and are, for that reason, the very worst thing that they could possibly use. My treatment of Blackheads, Pimples, Blotches and all eruptions of the skin, are as follows, and has invariably proved very successful; Wash the face carefully every night before retiring with warm water and a little oat meal tied up in a small cloth bag, then, after drying well, use the following inexpensive and perfectly harmless prescription: which can be filled at any drug store: Clearola 1/2 oz., Ether 1 oz., Alcohol 7 ounces. Use this mixture on the face as often as possible during the day, but use night and morning anyway, allowing it to remain on the face at least ten minutes, then the powdery film may be wiped off. Do not wash the face for some little time after using. By following this simple treatment you will soon have a clear Brilliant Complexion.

When You Visit THE FAIR See Our Exhibit OF PIANOS

Hear the Wonderful "AUTOTONE"—The best Player-Piano in the world. Hear the "ELECTRELLE"—The self-playing instrument which can be attached inside your own piano. The new style EDISON and VICTOR TALKING MACHINES will be shown.
