TEST YOUR SEED CORN

The Following has been Circulated by the Pennsylvania Railroad Co. for the Benefit of the Farmers

ernels, which, if every one grows. would produce 800 stalks, which would produce 800 ears of corn. 00 ears of corn would make about bushels, which at the price of 50 cents a bushel, would make \$4.00.

Test Seed at Once If every grain of corn planted should grow, you could double your corn crop. The process of testing is so simple that and child can learn it in ten minutes. The children of the public schools can do all the testing, and if you plant only tested seed, you can dapend upon an increas of 10 bushels per acre. The average corn country has 100,000 acres of land; ten more bushels than you ever had befor would mean 1,000, 000bushels which at 50 cents, a very conservative price, would add \$500,000 to the annual wealth of our country.

What applies to corn applies to other grains. Teach the children to est it all.

Take twelve of your seed ears selected according to your best judgment, arrange them in a row where they will not be disturbed.

Take a piece of any kind of cloth. a yard or more in length and eight carpet or rug which you or ten inches in width; mark twelve 3-inch square down the middle of The cost of this wonderful little the cloth as per diagram, with a wax crayon pencil, and number.

Carefully remove six to ten kern-spect or we will refund your money. Drop card for circular and demon- them out with the tip of a pen knlfe from the edge of the kernel being careful not to injure the germ. Place them in numbered squares

orresponding to numberes on ears. After dampening the cloth thor oughly, roll up a little wet sawdust or sand in the end to help retain the moisture. Fold the cloth over from the sides, as shown by diagrame, and roll up as shown. Place he roll in a bucket or box of damp awdust or sand, and put behind he stove or some place where it will not chill. It is best to keep the temperature about 70 degrees, more or less. At the end of five or six days the rolls may be opened, and you can learn from this simple test the conditions of your seed corn.

If you are in boubt to the conditions of your seed corn it would be well for you to make a shallow box, some two or three inches deep, large enough to make a test for ten acres: that is, twelve squares one way by ten across. The box should be about 36-40 inches. Fill the box about half full of moist dirt, sand or sawdust. We prefer sawdust because it is lighter and can be handled in the house. Press it well down so that it will have a smooth even

Take a white cloth about the size fashion, making squares two or Tyndall, Allen Schatz, Roy Arndt, three inches each way, numbering Harold Funk, Henry Witmer, Ben-1, 2, 3, ect. > Remove six to kernels from each ear selected, numbering each ear and putting the kernels from each in the corresponding square in the lums. ox. Place the box in a worm place, where it will not chill. Keep the pad well dampened and warm, and in five or six days you can roll up the pad carefully and you will find that your seed will show its quality; kernels which show both sprouts and rootlets in healthy condition are fit for planting; from which the kernels show sprouts only, or roottles only may not grow, but it is best not to take any chances with such ears.
