

They can't help it. Wear is bred into them. It took us years to learn how, but we stuck at it; now our 5A Blankets stand supreme—they outwear three ordinary blankets. Every 5A Blanket is closely woven from the strongest, tightest-twisted yarns our expert spinners can make. And it is all done to save you money—to make one blanket do the work of three—to save you trouble and expense.

5A Horse Blankets are sold by the largest horse-blanket factory in the world direct to your dealer. Here, again, we save you money by cutting out all jobbers' commissions. You pay but one profit.

The 5A Storm King is the most popular medium-priced square blanket on the market. Extra large, extra thick, extra strong, extra warm. Weighs 8 lbs., measures 84 x 90 inches. Price only \$2.50—worth twice as much. See them before you buy any other.

Buy a 5A Square Blanket for street use. Buy a 5A Bias Girth Blanket for stable use. Buy a 5A Flank Robe for carriage or auto.

USEFUL INFORMATION FOR THE FARMER

Keep the Cow's Skin Clean—The Quantity of Lime Needed—The Dairy Cow—Corn Silage and Manure—Treating of Wounded Trees—Other Notes.

An old stagnant pond is no place for a cow to slake her thirst.

Cows differ somewhat in the amount of roughage they will take.

Every dairy farmer should organize a cow testing association of his own.

A boarder in the dairy herd is a sign of an owner who is satisfied with life as it is.

The mangel is excellent for stock feed, being greatly relished by milk cows in winter.

When butter refuses to "gather," the cream may be too sour or the temperature too low.

Provided your cow is a good one, the more she is fed along right lines the more she will give.

Stringy milk is brought on by a fermentation in the udder caused by a certain form of bacteria.

Milk left in the pail of the skimmilk calf means sour milk in a very short time these hot days.

To be sweet and clean it is desirable that the cow stable be whitewashed at least twice a year.

The best cow is the one that can consume the largest amount of roughage and use it to the best advantage.

The number of acres required to feed a herd of twenty cows in full milk will depend largely upon the condition of the ground and the season.

In California the following mixture was used on trees three years ago and is still in good condition. One part of crude petroleum to three parts of rosin; warm in separate dishes, mix and apply warm to cuts made by pruning or by cultivator injury. While this mixture is not better than grafting wax, it is much cheaper and is worthy of trial.

Twenty tons of corn silage an acre were harvested last fall by Geo. L. Hyslop, of Ohio. He used it for fattening cattle and hogs. The most interesting thing about this yield is that it is the result of proper utilization of barn yard manure. The manure shed has an important place on the farm.

The cow is a machine to convert food into milk. Thus she must have a large middle and strong constitution to insure best results. She must also have a large udder, large milk wells, large crooked milk veins and good sized teats. Her head should be lean and angular in appearance, with the eyes standing out prominently. The neck should be rather long and clean in appearance, the shoulders pointed and the backbone rather prominent. The skin should be loose and soft to the touch.

The quantity of lime needed under different conditions varies from a few hundred pounds to several tons; but an average of about one ton of good lime to the acre will usually be sufficient. If grades of lime are used which contain 50 per cent, or less of calcium oxide larger quantities will be required. Smaller applications perhaps 300 to 600 pounds once in two to four years will be preferable to heavy applications at longer intervals; and if the slag is freely used as a source of phosphoric acid, it is probable that a second application of lime will, in most cases, be necessary.

Nature has given all living creatures a wonderful covering for the body. The skin is a most perfect and yet an exceedingly simple system of carrying off impurity and the same time of providing the body with needed nourishment from the air, through the mysterious channels of absorption. Every cow's body is completely covered with this network of cells. If these are kept clean and open, so that they may do their work, the cow will be more apt to be healthy than if they become closed. This has been most strikingly proven by covering the bodies of animals with a soft varnish which will not admit air, and the poor creatures soon die, their heart and lungs being fairly engorged with blood, just as would be the case if they were smothered. Do we need anything more to prove that it stands us in hand to keep the bodies of our cattle clean by the use of a brush and comb now and then, but every day, regularly? If this be not done, the pores of the skin get closed with the dust which is always present in our stables, especially at this time of the year, when we are feeding hay and other food that is apt to fill the air with flying particles. At once the cow begins to suffer. She cannot digest her food as she would otherwise and she requires more food and richer food to maintain life in a good degree.

Going Over the Route
Mr. F. E. Hershey has charge of Mr. J. A. Zohn's mail route this week. The latter is suffering from an attack of rheumatism.

Ran Into a Window
On Saturday morning just before seven o'clock two large auto vans went down Main street at a high rate of speed. Considering their size they were going entirely too fast and the chauffeurs were either intoxicated or did not care as they did not sound a horn thru the tire town. A horse belonging to Mr. C. N. Mumma was frightened but was prevented from doing any damage. A fine horse owned by William Strickler was gotten under control with great difficulty. Good presence of mind of Mr. J. B. Keller and his repeated warning or signal to one chauffeur, prevented a head-on collision with a lot of cattle. Thus we could continue naming a dozen horses that were frightened at these recklessly driven vans. Last but not least was a two horse team of Mr. Eli H. Engle, which was frightened at the post office. These horses are in town almost daily and never scare at autos but with this exception. They turned around and with Arthur Hofer hanging to the bridle, ran down Main street, turning on the pavement in front of this office, running directly into the large plate glass window, breaking it into thousands of pieces. They made a second dash against the parlor door but the tongue truck the wood work so firmly that they were unable to go any farther.

Mr. S. H. Miller kindly consented to take his motorcycle and follow the rascals in order to get their numbers. He caught up to them at Salunga. Their numbers were as follows: 30720 was the first van. It is owned and operated by the Millbourne Storage Co., of 4950 Folsom St., Philadelphia. No. X677 was the second car which is owned by the Motor Truck Co., Inc., of 635 N. Broad St., Philadelphia.

Suits for damages will be instituted against these two owners as soon as the correct amounts are ascertained.
