

The Fact Remains

No amount of misrepresentation by the peddlers of alum baking powders, no juggling with chemicals, or pretended analysis, or cooked-up certificates, or falsehoods of any kind, can change the fact that

Royal Baking Powder

has been found by the official examinations to be of the highest leavening efficiency, free from alum, and of absolute purity and wholesomeness.

Royal Baking Powder is indispensable for making finest and most economical food.

High School Controversy

Editor Bulletin:—As the question becomes more thoroughly known we note that much interest is being taken in the subject, and so it should be. The question of education is a most important one, one that affects the future as well as the present.

We regret to note that there are in the community property owners who consider the financial affairs of much more importance than the education of the boys and girls. I desire to call attention to that which is unusual to see in any community, namely, the pupils of the High School canvassing the town obtaining votes asking for a High School building to relieve the present congested condition of our School and also asking for a four years' course in place of the three years' now have. This year's graduates are so anxious for another year to be added to the course that they will forego this year's graduation in order that they may have another year of High School work. On the one side we have the boys and girls asking for an education, on the other side we have a few men who are opposing them. It is indeed a deplorable spectacle and one that reflects anything but credit on the head of those opposing a movement that is for the betterment of our boys and girls. Another matter that should not be lost sight of, should the pupils of our High School be debarred from a fourth year and desire to continue their studies they can go to the nearest school having a four years' course and this borough will have to pay their tuition. We know of a number of cases of this kind on record. Do not stop or try to stop or retard the wheel of progress but put your shoulder to the cause and help it along. The boys and girls of our town appeal to the citizens of Mount Joy to help them. Will you refuse to heed their cry?

White bread and pastry should be avoided altogether, or used only very sparingly. Bread and other cereal products should be prepared from whole grain meal only. Nothing should be taken away from the grain in the milling process. As a result of the agitation against white flour by Nature Cure people, Graham bread, entire wheat health breads, and whole grain cereal foods are coming more and more in favor with the public. In order to comply with the popular demand for white flour, the hulls containing the mineral salts, and some of the gluten, which is equal in nutritious values to the high priced steak, are refined out of the flour into the bran. Our domestic animals was fat and strong on the bran, while their masters, the consumers of the impoverished white flour products, grow constipated, dyspeptic and nervous. Excess of meat, white bread, coffee and white sugar are undoubtedly the most common causes of constipation.

The green vegetables are most beneficial when eaten RAW, with a dressing of lemon juice and olive oil. Avoid the use of vinegar as much as possible. It is a product of fermentation and a powerful preservative which retards digestion as well as fermentation, both processes being very much of the same character.

Neither use pepper and salt on fruits and vegetables at the table. They may be used sparingly in cooking. Strong spices and condiments are more or less irritating to the mucous linings of the intestinal tract. They paralyze gradually the nerves of taste. At first they produce in time weakness and atrophy. Fruits and vegetables are rich in all the mineral salts in the live, organic form, and therefore the addition of inorganic mineral table salt is not only superfluous, but positively harmful.

The green leafy vegetables are not improved by cooking. It is different with the starchy foods such as rice and grains. Here the cooking serves to break up and separate the hard granulates and to make them more pervious to penetration by the digestive juices.

WHY MOUNT JOY MERCHANTS SHOULD ADVERTISE IN THE BULLETIN

Why Do You Name The Brand When You Mean The Commodity?

There are, in the United States, 2672 flour mills with a daily capacity of more than 50 barrels.

There are 232 catsup manufacturers, more than 475 cereal manufacturers, far more than 30,000 brands of soap made by 1038 manufacturers, shoe manufacturers to the number of 2150 and 41 manufacturers of talking machines.

Try to name a brand of flour, a brand of catsup, a cereal, a soap, a shoe or a talking machine, and the probability is that in every instance you will name the brand which is most extensively advertised.
