

One Price to All

BUICK

Sold Strictly On It's Merits

Never mind what any dealer promises you, you owe it to yourself to find out what the Factory Guarantee is on the automobile you propose buying and you should insist on this guarantee being made a part of the contract you sign when purchasing an automobile.

Some automobile manufacturers give no guarantee at all. That is one of the reasons why some dealers must offer you special inducements and discounts to sell their cars.

Farmers Column

VERY VALUABLE INFORMATION FOR THE FARMERS

An Almost Sure Cure for Bots—Good Roads Essential to the Prosperity of the Farmers—The Building of a Hog House—Moldy Feeds

Here are some dairy and other hints written for the Farmers Almanac, just 100 years ago, that sound right up to date: Keep those cows which are forward with calf and feed them with good hay and a few potatoes once a day. Now and then sprinkle their hay with salt water. All those little attentions will make your cattle look bright and hearty. A farmer's barn should be kept as neat as a hostess's stable. His cattle should also be curried and trimmed, and there ought never to be any appearance of slovenliness or want of proper attention. We should admire a neat husbandman as we do a neat housewife. If you attend to this part of my directions, you will immediately see that all your farming tools are in order against the season for using them.

Some of the molds are very poisonous and produce symptoms which stimulate ptomaine poisoning in the human. In fact, decayed food may be poisonous, both from the presence of molds and certain poisonous products of decomposition. Animals should never be given moldy food. Sometimes food that is slightly moldy will produce fatal poisoning, while at other times very moldy food will seem to cause no trouble. The only safe way is to feed no moldy food. Beet tops that were left in the fields and covered with snow for months, come to the surface with the melting of the snow and a few warm days furnish the right condition for molds to grow, and most of this feed has not only become worthless but positively dangerous. Animals, especially cattle and sheep, do not object to molds on feed, especially if other foods are not available. There are many beet tops left in the fields, and they are in many instances so badly decayed and infested with molds that they are dangerous.

In a short time the building season will be on, and those of Our Folks who contemplate building a hog house will find the following hints useful: Hog houses need not be elaborate or expensive, but they must be good for the purpose. A hog house is dry and clean inside, is well ventilated, admits plenty of light, is free from drafts, is comfortably warm for the hogs. Such a shelter will avoid trouble from colic, rheumatism and pneumonia. It will not be a breeding place for disease germs. If your hog shelters are not satisfactory, see how well and how cheaply you can make them fit these conditions. In our damp winter weather, dryness is absolutely essential. Don't give too much bedding, and change it frequently by cleaning everything out of the sleeping pens. Scatter air-slacked lime about at frequent intervals. Use a coal-tar dip or crude carbolic acid solution and spray the pens every few weeks. Keep flies off the hogs. Do you like to go into your hog house? Why not? Fix it so it suits you and see what the pigs say.

An essential aid to the prosperity of the farmer is better roads. The bill lately introduced into Congress for the appropriation of \$25,000,000 for highways is unfortunately not so much intended to benefit the farmers as it is to gratify the pleasure seekers. And yet bad roads are the farmer's greatest handicap when it comes to marketing his products. There is probably no subject in which the progressive farmer is more deeply interested than that of having roads connecting him with his markets, over which he may be able to haul the greatest possible load. Good roads, like all other good things, are expensive to build and of too much value to be neglected. The Office of Public Roads of the Department of Agriculture has published a bulletin on "Repair and Maintenance of Highways." This bulletin does not treat the subject of road building, but takes up the repair and care of roads after they are built. All classes of roads from the national arterial road to the macadam road with bluminous surfacing, have received attention. The action of automobiles on road surface is explained. This bulletin ought to have a wide distribution, and a limited number are accessible to those who may make application to the office of Public Roads of the Department of Agriculture, Washington, D. C., mentioning the title of the bulletin.

The fact that bots live in the stomach of horses, firmly attached to the walls, makes them extremely difficult to dislodge; but the United States Department of Agriculture has found a remedy that gives excellent results. It is generally known that the yellowish eggs deposited on the hair by horse flies hatch out, and the larvae are taken into the stomach through the mouth by licking; but dislodging them when they are once attached to the lining is another matter. Not all horsemen, moreover, realize the extent to which a large number of bots in a horse's stomach up sets the digestive processes and causes loss of flesh and general poor condition. The remedy used is effective within two days. The horse to be treated is fed a little oats and hay in the morning and allowed to go without food the rest of the day. At night a purge consisting of an ounce of Barbadoes aloes or a pint of raw linseed oil is given. Next morning, three drams of carbon bisulphide, a volatile liquid, are given three times in gelatine capsules at hour intervals. The gelatine capsule soon dissolves in the horse's stomach and then the carbon bisulphide evaporates rapidly. The fumes make short work of bots and other parasites, but do not injure the horse. The treatment was tried with a large number of affected horses, and proved uniformly successful.

Potatoes vs Tobacco

The potato acreage of Lancaster County, it is said, will be increased 50 per cent this year, and the tobacco acreage will be less. Farmers are beginning to believe there is more money in raising good stuff to eat.

HOME HEALTH CLUB

By Dr. David H. Reece, Chicago, Ill.

Will Radium Cure Cancer? (Continuation of article by H. Lindlar, N. D. Author's rights reserved.) Authentic reports of cases where the radium rays had a destructive effect, are a ready record. The following quotations taken from an article in the December 1913 issue of "The New Age," entitled, "New Rare Elements of Great Cost," vividly describe the immense power of the X-ray emanations and report the death of several scientists as a result of exposure to the radium rays: "There is a strong anti-radium party in the medical profession which points out that Dr. John E. Edwards, president of the British Electric-therapeutic Society, suffered from a cancerous growth due to constant exposure to radium. His left arm had to be amputated. Another, Clarence Dally, had to have his fingers amputated, then his arms and finally died from the same cause. There have been other deaths, too, laid to the effect of radium, notably those of Wolfram G. Furths, of Chicago; Dr. Louis Weigel, of Rochester, and N. Radignot of Paris. The debate over radium's curative power is still on, full force."

"Of all its strange properties perhaps the oldest and without precedent as far as science knows is that a fragment of radium is always six degrees Fahrenheit hotter than its surrounding medium. This seems in direct defiance to one of the most important of physical laws, the law of the conservation of energy. Radium gives out heat incessantly, and yet remains super-heated. William Ramsey declares that a given bulk of radium would melt its own weight in ice every hour and keep on doing so for a thousand years."

"Radium is the only substance with the property of self-electricification. The energy contained within a tiny particle of it is amazing. Sir William Ramsay has estimated that the energy in a ton of radium, could be utilized would be sufficient to propel a ship of 15,000 tons with engines of 15,000 horsepower at a speed of fifteen knots an hour continuously for thirty years. To do that now requires a million and a half tons of coal."

Cancer, Not a Local, but a Constitutional Disease

For many years I have been teaching that cancer is a constitutional disease, "that it is rooted in every drop of blood in the body," that it is caused by the presence of certain disease taints, and food and drug poisons in the system; that these poisons may irritate and stimulate the cells in a certain locality, and cause their abnormal multiplication or proliferation in the forms of benign or malignant tumors. Dr. Loeb of Chicago a few years ago declared, "merely drawing a silk thread through a dormant, or slowly developing tumor, transforms it into a rapidly growing one, cutting with the knife produces the same effect. This accounts for the commonly observed fact, that when extirpated cancers recur in human beings, they increase in size much more rapidly than the original growth." I also claimed, in my writings and lectures, that meat eating has much to do with the causation of cancer.

Certain discoveries by Dr. H. C. Ross of London, England, confirm my theory, that cancer is not at all of local and accidental origin, but that it is constitutional, and that it is caused by the gradual accumulation in the system of certain poisons which form in decaying animal matter.

...flaa . ac s L. nih oo

The natural treatment comprises all those methods which build up the blood on a normal basis, promote elimination of morbid matter and poisons from the system, which establish the bony structures and establish the right mental and emotional attitude. Some of these methods are: a rational vegetarian diet, massage, hydropathy, osteopathy, curative gymnastics, air and sun-baths, the homeopathic remedies and mental therapeutics.

In cases where the cancerous growths have reached the breaking down process and have formed open sores, local treatment with certain herb extracts, diluted lemon juice, and organic potassium in the vitriol chemical form have proved valuable as local antiseptics and purifiers. It is obvious, however, that the earlier the disease is treated by the natural methods, that is before the breaking down process is far advanced, the easier and quicker will be the cure.

Court House Had Large Business

There were 463 deeds received for record on Wednesday in the recorder's office, also 298 mortgages and many releases. The number of satisfactions entered was 229. There were a few more papers received on Wednesday than on the same day in 1913.

In the prothonotary's office there were 106 judgments and 44 revivals of judgments entered. The satisfactions were about the same in number as a year ago. The April business was heavier this year than last, but was spread out over several days.

SMULL'S HANDBOOK FOR 1914

Every Effort Will Be Made to Issue it in a Few Months

Harrisburg, Pa.—Every effort will be made to issue the 1914 edition of Smull's legislative handbook within the next few months and a last call for the publication will be made during the coming week by A. N. Pomeroy, state superintendent of public printing and binding, because of the destruction of over half of the 1913 edition in the fire which destroyed the Aughinbaugh Press, which had unfinished contracts for state work.

The edition for 1913 was to have been 34,000, but only about 16,000 copies had been sent out, the balance being in the bindery which was destroyed.

Only 100 copies of the pamphlet laws of 1913 were destroyed in the fire, all of the rest having been delivered to the state authorities for distribution. The copy for the statutes at large, which was furnished to the Aughinbaugh Press before the contract expired, was not set up and will be handled immediately together with such other state work as is required.

A Tailless Calf

A tailless calf was born on Hiram Minnieb's farm, west of Litzitz, recently. It shows no signs whatever, that there was even a start made for the caudal appendage. It is quite a curiosity, and is being viewed by many people.

Natural methods produce results by improving the health conditions in general, by making the system purer and more normal, and in that way establishing natural immunity, not only to cancer, but to all other disease. On the other hand all forms of purely local treatment at best only suppress local symptoms, but do not contribute anything to the purification of the system from disease taints and "alkaloids of putrefaction," which are at the bottom of practically all diseases arising in the human body. We leave it to the intelligence of the reader which method is most rational and most promising of practical results.

I will gladly answer all inquiries for information on health subjects from readers of this publication if same are addressed to Home Health Club, 5039 Cottage Grove Ave., Chicago. Send full name and address with 4 cents postage.

RESULTS

YOUR CHICKENS DON'T GET HALF ENOUGH TO EAT if you do not feed The PARK & POLLARD GROWING FEED

No Magician in the Arabian Nights could produce results any faster than this feed.

From 1 1/2 oz. when hatched to 10 lb. weight at six months is nothing unusual on this ration.

TRY IT at our expense;

Your money back if it does not do better than they claim.

We have added to our line of stock, **RYDE'S CREAM CALF MEAL.** Takes the place of milk at half the price. Put up in 25 and 50 lb. bags.

Protein, 25 per cent.; Fat, 5 per cent.; Fiber, 6 per cent. Second to none on the market.

FOR SALE BY

BRANDT & STEHMAN, MT. JOY PENNA

Business Directory of Lancaster County New Farm and

Our Representatives Wear This Badge

The publishers of the old reliable FARM JOURNAL, of Philadelphia, are preparing to publish the illustrated FARM AND BUSINESS DIRECTORY OF LANCASTER COUNTY, giving the name, post-office, rural route, and telephone connection of every farmer in the county, all arranged under post-offices, and a classified BUSINESS DIRECTORY, including all business houses in the county, arranged under the proper headings.

With the Directory is given a complete ROAD MAP of the county, with each road NUMBERED to show the exact location of each farm, as given in the Directory.

This Directory will contain many interesting PICTURES of fine farms, thoroughbred stock, churches and public institutions, schools and pupils, portraits of prominent people, etc.

The names and necessary information about farmers are being secured by PERSONAL CANVASS of the 10,835 farms in the county. This Directory and Road Map are so useful to farmers that from our experience in other counties we can guarantee that the Directory will go into at least SIX THOUSAND HOMES of Lancaster County, where it will be constantly used by farmers and business men for the next five years.

The Farm Journal Directories give information which makes them indispensable to every farmer and business man in the county. They are an immense improvement over other directories, containing what most publications do not give.

First, they give the names, addresses, telephone connection, and other important information about farmers, secured by PERSONAL CANVASS from the farmer himself. This canvass of country districts is so costly that most directory publishers cannot afford to make it, and therefore lists of farmers published are in nearly all cases copied from the assessor's lists.

The classified BUSINESS DIRECTORY includes every business house in the county, whether in city or country. In other directories the names of houses in the cities and large towns only are usually given.

These features, with the Road Map, make the Farm Journal Directory an indispensable hand-book for every live farmer and business man in the county.

If you are not sure that correct information has been given to one of our canvassers, please send it direct to our main office.

WILMER ATKINSON COMPANY Publishers of Farm Journal WASHINGTON SQUARE, PHILADELPHIA
