Sale to commence at 9:30 A. M. on Friday, December 4, 1914, when conditions of sale will be made known by

D. B. Kieffer & Co.

Save Money and Work With This International Hasvester Eugine

Buy and use an I. H. C. tank-cooled engine, and before you have used it for long, you will have noted how many separate little sources of economy there are in its operation. I. H. C. engines are throttle-governed, keeping the regulation down very close to the exact power needed. Besides, as soon as an I. H. C. engine is stopped, fuel and attendance costs cease; and no time and fuel is lost in the starting. You will save much, too, because I. H. C. engines run on various fuels, the cheapest or most convenient.

I. H. C. engines are simple in construction, easy to care for. Parts are easily removable. The dealer will not allow you to lose time waiting for a new part, if you should need one. There are many features of design, material and construction that it will interest you to know, because they mean economy and dependable operation.

When you are ready to examine an I. H. C. tank-cooled engine, the I. H. C. dealer will be ready to show you. He will give you a catalogue, or we will send you one if you drop us a card.

The Only Feed Grinder That Grinds Wet Grain Without Clogging

You needn't have trouble when you come to grind wet feed. We have a line of Feed Grinders that will handle it at the same speed as dry.

LETZ SELF-SHARPENING SILENT BUHR **FEED MILLS**

Give Letz Mills a trial and you will never use any other kind. They are the fastest-working, easiest-running Feed Grinders made, and cost you least for gasoline. Grind Oat Hulls, Alfalfa, Hay, Corn with Cobs and Husk, Wheat Screenings and all Small Grains fine at a single grinding. Buhrs sharpen themselves. One set grinds 1000 to 3000 bushels. We can furnish you the right size Letz for your engine's horsepower. See us about it at once.

SUBSTITUTE FOR GASOLINE

Is More Powerful and Costs Only Two Cents a Gallon

A test of a new chemical preparation, which was concluded on Friday at Indianapolis and which was concluded under the eyes of the American Automobile Association, and consisted of a run of 1,030 miles, was declared to prove that a substitute had been found for gasoline and at a price of two or three cents a gallon, with the added advantage that the new fuel could be carried in the form of a powder, to which water is added as needed.

The 1,030 miles were run in 20 hours, 32 minutes and 4 seconds from the time the test was started on Thursday until it was completed at nightfall. The actual running time for the total mileage was 18 hours, 24 minutes and 4 seconds, an average of 55.95 miles an hour. The average amount of the new fuel used in the test was only 46 gallons to the 500 miles, while under similar conditions it takes an average of 53 gallons of gasoline to the 500 miles, according to the past trials.

The fastest lap made in the test was the next to the last one, driven by Ted Collier, head tester for the Marmon Company. That lap was made in 2.21, an average of 62.85 miles an hour. The first 100 miles of Thursday's test was made in 1 hour, 49 minutes and 9.8 seconds, an average of 54.85 miles an hour. The driver was Vere Barnes, who was with Joe Dawson in the last 500-mile Decoration Day race, and Collier was his relief.

Automobile manufacturers declared that the time made with the new fuel was remarkable, especially in view of the fact that a stock car was used.

Carl G. Fisher, who is a member of the company that proposes to manufacture the new fuel, said that the engine would be taken to pieces and thorough examination of all its parts made to determine the only remaining question—whether the acids used in the manufacture of the fuel are or are not injurious. Judging from exterior appearances, he does not think they are.

With the completion of the tests, it is the plan of the promoters of the new fuel to begin marketing the product.

Frank Fanning, Philadelphia manager for the Marmon Automobile Company, predicted the complete success of zoline, and said it would be only a short time until automobilists would be using the new preparation instead of gasoline, and getting it at 2 or 3 cents a gallon. Mr. Fanning spoke authoritatively, for he was at Indianapolis, and witnessed some of the experiments.

Concerning his personal observations of the new motor fuel, Mr. Fanning said:

"Observations of zoline in use justify the conclusion that it will prove a substitute for gasoline, to be had at much cheaper rates and giving the same results as gasoline. The first public tests were made a year ago.

"Zoline is about 90 per cent. water. There are two simple ingredients added, and to this two other ingredients, which are a secret of John Andrus, who discovered the formula. It can be made very cheaply, probably for a cent or a cent and a half, and sold for two or three cents.

"At Indianapolis I saw it in use. It was tested in an engine of a high-power car, driven fourteen miles at the state of sixty miles an hour. Andrus was given buckets of water to which he added packages of zoline. There was no gasoline used. The car maintained a speed of sixty miles an hour. It was decided to give it a more thorough test in a 1,000-mile run. This has been done this week."

Chemists view the experiments with interest. In view of the recognized fact that water itself will not burn, chemists are curious as to the composition of the mixture. Sam'l P. Sadtler, a prominent chemist, connected with the Franklin Institute and the Philadelphia College of Pharmacy, said:

"To my notion zoline is probably obtained by decomposing water and bringing the gases in contact with other chemical gases, possibly hydrocarbon gas. Water will not burn, so that it must be the chemicals which are added to the water which are responsible for the results accredited to zoline."

HOME HEALTH CLUB

By Dr. David H. Reeder, Chicago, Ill.

Baby's Demands:—It is astonishing to all mothers to see what other people's babies will go through and appear to be perfectly happy and healthy while her own precious darling seems to require most exacting care and even then colic, constipation, colds, croup and all other kinds of baby ailments appear to afflict it on every hand.

How often we hear a fond mother say, "I don't see how it is that Mrs. Bejones children are always out in all kinds of weather, wet and cold, as well as dirty, eating all kinds of foods and yet they seem to be well, while if my children so much as get damp I have to be up half the night with them."

Yes, there is some truth in all that, children are rugged and healthy, according to whether they are allowed a free outdoor life or not, but as a matter of fact the other mother says much the same thing about your children. She has her worries and cares and her nights of anxious watching of which you know nothing.

Children, especially those we may safely call babies, must be looked after carefully and should not be allowed to play in a wet yard early in the morning during the fall days, unless it's little feet are securely protected from the wet grass by substantial rubbers. A cold contracted during the fall may, unless properly treated and promptly treated as well, become chronic in its nature and a catarrhal condition established that may become tubercular, cause adenoids, polypus, enlarged tongils, deafness or other ailments that are all too frequently neglected simply because the child makes no special complaint.

Diseased tonsils are frequently the source of infection which later on causes the terrible deformities of articular rheumatism. In some cases, however, such deformities are caused by neglected teeth. While yet a baby the habit of thoroughly cleansing the mouth and teeth the first thing in the morning and the last thing at night should be formed.

Examine your child's teeth, throat, nose and ears frequently and if there is any sort of discharge or puslike secretion, treatment should be promptly applied. I will cheerfully make specific suggestions for individual cases if you write me fully about it.

HABIT—A CURE OR A BLESSING

Little Talks on Health & Hygiene by Samuel G. Dixon

Someone said that "Man is a creature of habit" permitting us to draw our own conclusions. We are perfectly familiar with bad habits. Even if we were not liberally supplied with conscience, teachers and moralists have said enough to familiarize us with this side of the question. Fortunately there are good habits and they are often a blessing thinly disguised. Our general health and well-being depends largely upon the character of our habits.

Regularity partakes something of virtue. This is especially true when it pertains to eating, sleeping, labor and recreation which covers the daily program of the majority of mankind. In the primitive state it was impossible for our ancestors to eat regularly. The hunter might be successful and again he might not. Periods of enforced fasting were followed by corresponding overindulgence when the chase was successful. The demand for food at regular intervals was the first stimulus to civilization. We have achieved a state where three meals a day are possible to the most of us. In gratitude we should strive for moderation, knowing that in a few hours more food will be forthcoming.

Sleep is the great restorer of both body and brain. Irregular hours of rest result in an excessive strain upon the nervous system which in turn reacts favorably upon the human economy. Regularity in the periods of rest make for even temper and physical stability.

Labor to achieve worthy accomplishment must be steady and persevering. The habit of work is a necessity for one who would realize his ambitions.

Even in our recreations the majority of us are better for a certain degree of system for otherwise it is apt to become a case of over or under indulgence.

It is the same with our bodily functions— temperance and regularity are conducive to obtaining the maximum of efficiency for the longest period of time. Excessive friction and rust are equally hard upon machinery.

The formation of good habits in the care of the teeth, bathing, daily evacuations, eating, sleeping, exercise and living in fresh air will go far toward making the doctor's visit less frequent.

Learned men tell us that in Latin the word "edifor", means something "to eat." In the United States its meaning is altogether different. It means to scratch around like blazes to get something to eat.
