

TAX COLLECTOR 74 YEARS OLD

Expected to Resign on Account of Feebleness — Gained Strength and Twenty-four Pounds by Taking Vinol.

Corinth, Miss. — "I am a city tax collector and seventy-four years of age. I was in a weak, run-down condition so that I became exhausted by every little exertion. My druggist told me about Vinol, and I decided to take it. In a week I noticed considerable improvement; I continued its use and now I have gained twenty pounds in weight, and feel much stronger. I consider Vinol a fine tonic to create strength for old people." — J. A. PRICE, Corinth, Miss.

As one grows old their organs act more slowly and less effectively than in youth, circulation is poor, the blood gets thin, the appetite poor and digestion weak. Vinol, our delicious cod liver and iron tonic, is the ideal strengthener and body builder for old folks because it creates a good healthy appetite, strengthens digestion, enriches the blood, improves circulation and in this manner builds up, strengthens and restores feeble, run-down, nervous, aged people, and if it does not do what we say, we will pay back your money.

W. D. CHANDLER & CO.

Krall Meat Market

I always have on hand anything in the line of Smoked Meats, Ham, Bologna, Dried Beef, Lard, Etc. Also Fresh Beef, Veal Pork and Mutton. Prices always right.

- Large Engines, self-winding, \$1.00 each
- Roller Skates, 48c, 98c and \$1.39
- Rubber Toys, 10c to 29c

A COLOSSAL "MADE IN U. S. A." MERCHANDISE, FOOD, DRUG AND CHEMICAL EXPOSITION

"Made in U. S. A." will be the predominant note of the Merchandise, Food, Drug and Chemical Exposition which will be held at Madison Square Garden, New York, January 18-25, 1915, under the auspices of the Drug and Chemical Exposition Co., Inc., and the Associated Clubs of Domestic Science. Last January the same company at the same place gave the largest and most successful drug and chemical show ever seen in America, and this one planned for next January will be much wider in its scope and even more colossal in the variety and extent of its exhibits.

The cataclysm in Europe has proved disastrous to the trade of the whole world, and America has suffered by being cut off from foreign markets which heretofore have supplied us with many important lines of merchandise. But this demoralization in our trade with Europe may prove to be a blessing in disguise. Europe's opportunity is America's opportunity. The United States can now make itself independent of the rest of the world in its manufactures.

This comprehensive exhibition of American manufactured products will open the eyes of the hundreds of thousands who will visit it to the real and the potential resources of the United States for supplying all the wants of the American people.

During the week of the exposition American Druggists Syndicate, a co-operative association of 17,000 retail druggists and 3,000 physicians, manufacturing the A. D. S. line of household remedies, toilet preparations, pharmaceuticals, etc., will hold its annual stockholders' convention, which will be attended by at least 6,000 members from all parts of the country. Other pharmaceutical associations and organizations of manufacturers and retailers will hold meetings during the week in the large convention hall.

In addition to the exposition there will be theatrical, musical and moving picture entertainments, so there will be instruction and amusement to suit every legitimate desire and taste.

The American Druggists Syndicate, founded only nine years ago by C. H. Goddard, a Western business man, and ever since its able and resourceful manager, is the largest and most comprehensive co-operative organization in America, having 20,000 members, a plant covering more than ten acres of floor space at Long Island City, New York; flourishing branches in several of the large cities of the country, doing a business of five million dollars a year and having assets and resources exceeding three million dollars. Since its organization it has paid its stockholders dividends exceeding one million dollars.

The Associated Clubs of Domestic Science and Pure Food Congress will also hold their convention at the Madison Square Garden during the same week of this Exposition.

At their last New York meeting they passed the following resolutions:

"Whereas, on account of the great European war, most of our importations have been withdrawn, and America is thrown largely upon her own resources; and

"Whereas, while we have been spending vast sums of money for these importations from abroad our faith in our country's resourcefulness is such that we are confident that we can produce all that is necessary for our own needs and comfort; and

"Whereas, we recognize in this crisis an opportunity for America to demonstrate the real capabilities of her industries; therefore, the members of the 'Made in U. S. A. Exposition' be given at Madison Square Garden, January 18 to 25, 1915, under our auspices and advise manufacturers and dealers to take advantage of this Exposition as an opportunity for revealing to the public the real extent of America's greatness and resourcefulness, and our capacity for taking care of ourselves at such a time as this."

"Resolved: That we, the members of the Associated Clubs of Domestic Science, do give our support to the advancement of American-made products of every kind, recognizing in this that we are working no hardship on any of our trading nations of Europe, which need all their own production at home; and, be it further

Resolved: That we, the members of the Associated Clubs of Domestic Science pledge our hearty indorsement of the 'Made in U. S. A. Exposition' to be given at Madison Square Garden, January 18 to 25, 1915, under our auspices and advise manufacturers and dealers to take advantage of this Exposition as an opportunity for revealing to the public the real extent of America's greatness and resourcefulness, and our capacity for taking care of ourselves at such a time as this."

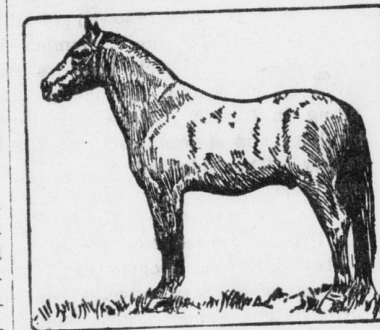

E. W. GARBNER, Member of American Drug Syndicate

HORSES, PIGS and CATTLE

ARABIAN BLOOD IN HORSES

Claimed Greatest Perfection in Animals Cannot Be Attained Unless Conditions Are Favorable.

By F. KNORR. By some authorities it is claimed that the hardiness of Arabian horses may be attributed to the fact that they were bred and reared for thousands of years under the most adverse conditions. Other writers claim, and justly too, that the best environment can bring out the best qualities in man and beast—that the greatest perfection in animals cannot be attained unless conditions are favorable. How then can we accredit the desert, the sun-parched plains of Arabia, to be the home of the beautiful Arabian horse? All indications

Typical Arabian Horse.

point toward the grassy slopes and the foothills of the Caucasus mountains, where physical conditions are so similar to those we have along the foothills of the Rockies, where a dry climate and moderate rainfall afford good pasture but without the tendency to make a soft spongy hoof.

Commenting upon the statement that the Arab blood used so long ago, can leave no trace in our present breeds in this country, an authority says: "And though it can scarce be doubted that, in the very commencement of turf-breeding there must have been some mixture of the best old English blood, probably in great part of Spanish by descent, with the true Arab or Barb race, the impure admixture is so exceedingly remote, not within fourteen or fifteen generations, that the present race horse of England and North America cannot possess one-sixteenthousandth part of any other blood than that of the desert."

It is a long time since the horses Messenger, Diomed, Mambrino, Justin Morgan, Bushy, Spark, Selina, Blaze, Fearnaught, Traveler and Ethan Allen lived, yet our best stock traces back to them. Without Justin Morgan there would be no Morgan horse. Justin Morgan was rich in Arab blood. Messenger and Diomed were of like parentage. The beautiful coach horses known as the Hackney trace their lineage to the Arabian breed. At Fort Collins, Colo., where the department of agriculture is now trying to perfect a new type of carriage horse there is at the head of that stud Carmon, who carries in his veins the blood of the Arab. The grace and beauty of the powerful and massive Percheron are due to the Arab lineage which has removed that coarseness which prevails with many breeds of draft horses.

CULLING UNPROFITABLE SOWS

Cost of Pigs Determined by Size of Litter—Very Prolific Animal May Raise Ten.

If a sow raises but three pigs, says Professor Smith of Purdue university, it means that they are costing five dollars each. If instead of three she raises five, the initial cost is reduced to three dollars per head. If she is a very prolific sow she may raise ten, in which case the debt represented by each pig is only \$1.50.

When the breeder heartlessly culls out his sows that produce stock that never attain good size; when he promptly sends to the block the sow with small litters; when he gets out of his herd the feeble hogs and the hogs of low vitality, then he will hear less about the relative advantage of the cross-bred hog.

RATION FOR THE BROOD SOW

Cooked Potatoes, Middlings and Skim Milk Are Excellent Just Before Farrowing Time.

A subscriber asks if cooked potatoes, middlings and skim milk make a good ration for brood sows before farrowing, and states that a neighbor advised him not to feed skim milk to sows before they farrow.

This is a good ration for a brood sow. The protein in the skim milk will balance up the starch in the potatoes and the middlings being a well balanced feed no trouble need be anticipated from feeding this combination so long as the sow has plenty of exercise and feed just sufficient to keep her in a thrifty condition. Potatoes are a rather bulky feed and milk is an important factor in a satisfactory ration for brood sows.

Six New Game Preserves

State game and forestry officials are getting together on sites for the six new game preserves which are to be established on State forestry reservations and which will make a dozen such spots for game to breed and live without interruptions from sportsmen.

Licenses Will Run Over 320,000

State Game Commission officials believe that the number of hunters' licenses issued this year will run over 320,000. Almost all counties showed increases, the exceptions being agricultural counties like Lancaster.

GO THROUGH HARDEST ROCK

No Substance on Earth Can Resist the Action of Prepared Steel Wires.

Stone is still sawn by hand, even in great cities where the latest appliances of the mechanical art are to be found. Yet the mechanical sawing of rock is at least sixteen centuries old, and in recent years has reached a stage of perfection.

The idea of using a metal cord and a mixture of sand and water for sawing stone was patented by Eugene Chevallier in France in 1854. His apparatus, with scarcely any change, was used last year in cutting a trench through the Pont Neuf in Paris.

The principle upon which the mechanical stone-saw works is described by Victor Raynaud in La Science et la Vie as follows: An endless rope composed of three steel wires twisted together is set in movement and draws with it a grinding granular substance, pressing this hard upon the stone that is to be sawn. The mordant substance is grit mixed with water. The stream of water renders the movement easy and prevents the heating of the cable. The ends of the cable are joined by splicing.

The hardest rocks, such as porphyry, are now sawn more easily than the softer, such as marble, but not so rapidly. Marble is sawn at the rate of nearly nine inches an hour, granite at from six to seven inches an hour.

THREE THOUSAND YEARS OLD

Excavations Have Revealed Ancient Structure on Site of Prehistoric Tyrins.

Excavations recently carried out by the German Archaeological institute on the site of prehistoric Tyrins have revealed the existence of a still more ancient palace lying beneath the remains of the palace laid bare by Schliemann and Drogfeld some thirty years ago.

The whole elevation on which the fortress-palace stands was thickly inhabited at least as far back as 2000 B. C. Among the early inhabitants now discovered is a large circular building about fourteen meters in diameter, which may be recognized as the most ancient palace of the dynasty of Tyrins. This structure, which was built before 1500 B. C., differs completely in design from the later building. The places of sepulcher of the local princes were long sought in vain, but a bee hive tomb in excellent preservation has been discovered and excavated. More than two thousand years ago it was robbed of its treasures, and in the time of the Roman emperors it was converted into an oil mill.

Other tombs have been found which it is hoped may prove intact. They will be excavated.

Proud, Imperial Race.

The Peruvians are a proud, imperial race, living amid the grandest scenery of the western hemisphere, and holding high ideals of what is best in education and the unthought grace of life. On the great country estates there is much of the fine tradition and chivalrous sentiment that came from the best people of Castile and Aragon. The Indians of the high plateaux are a unique reminder of a civilization that bourgeoned centuries before the face of the white man had blossomed like a flower in the western forests. The immemorial records of a civilization that vanished in the midst of man's early history are faintly suggested in splendid ruins of the brilliant scenes. The name and fame of the brilliant men who built the walls and temples of Cuzco are lost, and all we know of the wonder and the charm of that forgotten culture in the Andes is found in the pathetic ruins of cities that are half as old as recorded time.—"The Empire Children of the Sun," Peter MacQueen, in National Magazine.

Of Course He Did.

A Scottish lad, delivering milk, was stopped the other day on his round by two police officers, who asked him if his employers put anything in the milk.

"Oh, ay!" was the innocent answer. The officers, thinking they had a clear case of adulteration, offered the boy sixpence if he would tell them what was put in it.

"Ah," said the boy, with a grin, "ye wadna gie' the saxpence though I tellt' ye?"

"Oh, yes, we will," said the officers. "Gie' it, then!" said the little fellow.

The sixpence was duly handed over, with the question: "Now, what does your employer put in the milk?"

"Why," said the boy, with a cunning smile, "he puts the measure in every time he tak's any out!"

Far From Barracks.

A minister one day got into conversation with an Irish soldier who happened to be stationed in Liverpool, and of whom he asked several questions as to what regiment he was in, and so forth. Ultimately Pat thought it was his time to ask a few questions. "Now," said he, "I'd like to know what you are?" "I'm a soldier, too," said the minister. "And what is stationed are you in, and where is it stationed?" The minister, pointing toward the sky, said: "My regiment is in Heaven." "Oh, man," replied Pat, "shure ye're a long way from the barracks."

KINDERHOOK

The Sunday school of the Kinderhook U. B. church on Sunday elected officers as follows:

- Superintendent, Charles M. Lichty;
- assistant, H. M. Eisenberger;
- secretary, John J. Gable;
- assistant, John C. Lichty, jr.;
- treasurer, Samuel C. May;
- organist, Bertha Lewis;
- assistant, Martha Kline;
- William Nissley and Ira Jones;
- supt. Home Dept., John Jones;
- supt. Cradle School, John Jones.

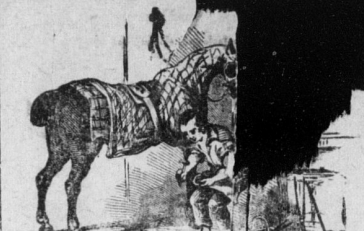

WHY MOUNT JOY MERCHANTS SHOULD ADVISE THE BULLETIN

"Abe" Lincoln said: "I do not know much about the tariff, but I do know this much; when we buy goods abroad we get the goods and the foreigner gets the money; when we buy goods made at home, we get both the goods and the money. Those who get the 'lion's share' of Mount Joy business are advertisers in the Bulletin.
