WEEKLY ARTICLES WRITTEN EXPRESSLY FOR THE MT. JOY BULLETIN BY DR. DAVID H. REEDER OF CHICAGO, ILL.

Getting Ready: Yes, I plead guilty, it's only another way of saying "preparedness," the big word with a bigger meaning that has been used so much of late but what I started out to ask about is this: How many families of the present day are prepared to feed themselves for a few weeks even, some of them a few days, to say nothing of months in case of a prolonged railroad tieup or an invasion of any kind, even a rigid quarantine, blockade or a failure of wheat or corn crop. Just stop and think over the most possibilities. I am not an alarmist nor a pessimist, on the contrary I am rather an extreme of the American type of optimism. We are all inclined to say "I should worry" and then let worry go hang.

The people on the farms are in a much safer position than the people of the cities and the people in the South, that is the real farmers of the south are much safer than those of the North. It is a lamentable fact, however, that the farmers of the entire country as well as the city dwellers have come to depend upon an almost daily supply of food products that are carried from point to point on the railroads. Any great calamity that would suddenly stop that transportation would cause wide-spread suffering. I believe heartily in the old-fashioned way of storing up a supply sufficient for emergencies and this should be done by the individual as well as the nation.

Last year this country produced a most bountiful crop of all cereals and at once we began to sell and export it. The present crop is barely sufficient for the needs of our own country but selling for export is going on just the same. The people that look beyond the days supply for their own commissary as well as that of the nation are the ones that realize fully the tremendous waste that is constantly going on in this country. In the cities and even in some parts of the country many children hunger for the fruit and vegetables that rot in the fields on other farms. Great piles of manure lie wasting near the barns while the careless farmer complains that his land is worn out. Disease breeding flies come from this fertile breeding place to plague the careless farmers and he complains about that and when his family is stricken through the activity of the typhoid fly, he blames the doctor.

The careless farmer lets the weeds grow rank where he should grow food. Many thousands of acres of most excellent land, which if cultivated would supply the needed surplus plus of fruits, grains and vegetables are turned over to weeds and their seeds increase the difficulty and labor of growing crops on the cultivated land.

In order to get ready for the ever increasing demand for more food by our steadily increasing population there must be more and smaller farms, more intensive cultivation of the land and loss food allowed to go to waste. Surplus potatoes should be desiccated during the years of abundant crops and need when the crop is light, also the surplus fruits should be evaporated and thus easily kept over for the lean years. Above all, however, from the Home Health Club standpoint, law in an abundant supply of good health. Treasure it as the most valuable possession of a human being. Incidentally don't forget that the Home Health Club is always ready to help you.

**GIRL COULD NOT WORK**

How She Was Relieved from Pain by Lydia E. Pinkham's Vegetable Compound.

Taunton, Mass.—"I had pains in both sides and when my periods came I had to stay at home from work and suffer a long time. One day a woman came to our house and asked my mother why I was suffering. Mother told her that I suffered every month and she said, 'Why don't you buy a bottle of Lydia E. Pinkham's Vegetable Compound?' My mother bought it and the next month it was so well that I worked all the month without staying at home a day. I am in good health now and have told lots of girls about it."—Miss CLAUDE MORSE, 22 Russell Street, Taunton, Mass.

Thousands of girls suffer in silence every month rather than consult a physician. If girls who are troubled with painful or irregular periods, backache, headache, dragging-down sensations, fainting spells or indigestion would take Lydia E. Pinkham's Vegetable Compound, a safe and pure remedy made from roots and herbs, much suffering might be avoided.

Write to Lydia E. Pinkham Medicine Co., Lynn, Mass., (confidential) for free advice which will prove helpful.

The prevailing prices for tobacco at present are being contracted for by various buyers throughout this section 16-8 and 2 for clean, 7 to 10 cents through for hail cut. Some farmers have topped suckers which they expect will develop into fair sized leaves providing jack frost does not appear for several weeks.

The Colored Camp held in Heisey's Park last Sunday was the center of attraction, it being the fourth Sunday. The first Sunday the weather was quite threatening. Three Sundays were ideal camping days attracting people from all parts of Lancaster county. It required special cars between Mount Joy and Elizabethtown.

**YOUR MAIL**

Little Talks on Health and Hygiene by Samuel G. Dixon, M. D.

Do you read your morning mail at the breakfast table? Have you ever used a knife or fork to open your letters? It is not an uncommon practice and yet an uncleanly and dangerous one.

The post office is essentially a public utility and it is universally used by all classes of people. A common point of destination may put my lady's dainty note beside a dirty scrawl from the vilest of slums.

Millions of pieces of mail matter are handled. A certain number of these come from people who are suffering from all kinds of diseases, some of them loathsome and infectious.

Stamps and envelopes, contrary to hygienic rules are for convenience sake frequently licked. Despite quarantine precautions mail sometimes comes from houses where cases of communicable disease exists which have not been reported.

Mail bags are not subjected to regular disinfection, and are not so cleaned as to make them safe from the danger of becoming a factor in the transmission of disease.

During the recent epidemic of infantile paralysis many of those working on the disease formed the opinion that it may be carried by a third person. Is it unreasonable to presume that the disease may be carried through the mail.

**Rather Than Me**
