PATENTS

W. N. U. N. A., BALTIMORE, NO. 16-1917.

Died of Premature Old Age!

How many times we hear of comparatively young persons passing away when they should have lived to be 70 or 80 years of age. This fatal work is usually attributed to the kidneys, as when the kidneys degenerate, it causes auto-intoxication. The more injurious the poisons passing thru the kidneys the quicker will those noble organs be degenerated, and the sooner they decay.

It is thus the wisest policy, to prevent premature old age and promote long life, to lighten the work of the kidneys. This can be done by drinking plenty of pure water all day long, and occasionally taking Anuric, double strength, before meals. This can be obtained at almost any drug store. You will find Anuric more potent than lithia for it dissolves uric acid as water does sugar.

For Hang-On Coughs, Colds

Clarksburg, W. Va.—"Since I was a little boy at home I have known of Dr. Pierce's medicines. They were tried by nearly every member of my family with good results, and I myself was greatly benefited by the use of the Golden Medical Discovery. I had caught a severe cold which settled on my lungs and in my bronchial tubes. I could not seem to get rid of it and the Discovery completely cured me and restored me to good health. I have also taken the Pleasant Pellets for sluggish liver, constipation and biliousness—they are fine. I am always glad to recommend Dr. Pierce's remedies."—John Bibby, 307 1/2 Jackson St.

Golden Medical Discovery, the herbal tonic, is made up in liquid or tablet form and can be obtained in any drug store. It contains no alcohol or narcotic, and its ingredients are printed on the wrapper.

Ducks—Young Pekings, 3 1/2 lbs and over, 22 @ 23; do do puddle, do do do, 21 @ 22; do muscovy, do do do, 20 @ 22; do smaller, 20. Pigeons—Young, per pair, 35; old, do, 35. Guinea fowl, as to size, each, 35 @ 45.

Eggs—Maryland, Pennsylvania and nearby firsts, \$11 @ 12c; Western firsts, \$11 @ 12; Southern firsts, \$10 @ 11.

STEER RETARDED IN GROWTH

Stunting an Animal as Result of Insufficient Food May Be Only Temporary Condition.

Live stock products are the result of growth. By far the largest part of increase in animals is the result of growth. The younger the animals the greater the growth impulse. Many factors influence the tendency of an animal to grow. Among these are age, condition, gestation, lactation and the quantity and quality of food. A given amount of food will produce more growth on a young animal than on the same animal at a later age. All the growth factors influence the young animal much more powerfully than older animals.

If an animal's food supply is insufficient for normal growth, the animal may be retarded in growth. If this

Well-Fed Hereford.

treatment is continued for a long time the animal may become permanently stunted.

Stunting an animal as the result of insufficient food may be only a temporary condition. An animal does not lose its capacity for growth as the result of stunting. F. B. Mumford, dean of the Missouri College of Agriculture, cites a feeding test at the Missouri experiment station in which an animal that had been stunted by poor feeding to such an extent that it weighed only 200 pounds at twelve months of age, gained 841 pounds during the second year. Only 5.5 pounds of grain per pound of gain made were required on this steer stunted during the first twelve months. A steer that had been generously fed during the first twelve months of his life gained only 500 pounds during the second twelve months, and this gain was more expensive than the gain made on the stunted steer.

The amount of grain required to make a pound of gain on the well-fed steer was 9.8 pounds.

It is certain that stunting an animal over for so long a period as twelve months does not destroy its capacity to grow.

GAINS MADE FEEDING LAMBS

Result of Test at South Dakota Station to Determine Value of Alfalfa and Prairie Hay.

The best gains ever secured at the South Dakota experiment station in feeding lambs was in an experiment to determine the comparative value of alfalfa and prairie hay with the same kind of a grain ration.

The grain ration consisted of a mixture of 100 pounds of oats, 100 pounds of shelled corn and 25 pounds of oil meal.

Each lot was started on one pound per head of the mixture daily, and increased until they were receiving two and one-tenth pounds per head of grain daily, and what they would eat.

The average daily gain per head for the lot that received the alfalfa hay was .51 of a pound, while with the lot that received the prairie hay, the average daily gain per head was .38 of a pound.

DAILY EXERCISE FOR STOCK

Horses and Mules Should Be Given Run for an Hour or So in Lot Adjoining Stables.

Horses and mules should have good daily carding and regular exercise. If there is nothing for them to do remove their shoes and give them a run for an hour or so in a well-fenced lot adjoining the stables.

The best and safest fence for pasture is of stout woven wire, rail or a combination board and smooth wire. Barbed wire should not be used, as it is dangerous.

SUNLIGHT IS BIG ESSENTIAL

Provision for Admission of Maximum Amount of Light in Barn Should Not Be Overlooked.

No barns or shelters for any kind of animals should ever be constructed without making ample provision for the admission of the maximum amount of sunlight. Such buildings should have a southern exposure, if possible. This will provide extra warmth in the winter time and the sunlight which is thus permitted to enter the building will destroy many disease germs.

Unprofitable Proposition.

If a man is not careful to keep the lice down on his hogs, he is simply feeding lice instead of hogs, which is hardly a profitable proposition.

Necessity for Sheep.

Roots, turnips especially, are almost a necessity to the profitable handling of sheep.

Exercise for Brood Sow.

The brood sows should have exercise if they are expected to do well at farrowing time.

MOST PROFITABLE SIDE LINE

Cost of Raising Turkeys is Small Where Free Range Can Be Given—Some Important Factors.

For those who are favorably situated for raising turkeys, a more profitable side line can hardly be found. Given plenty of range where the turkeys can find grasshoppers and other insects, green vegetation, the seeds of weeds and grasses, waste grain, acorns and nuts of various kinds, the cost of raising them is very small and the profits large. Grain and stock farms are particularly well adapted to turkey raising, and it is on such farms that most of the turkeys are found. Little has ever been done in the way of raising turkeys in confinement, and where it has been tried the results have been discouraging. Plenty of range is essential to success in turkey raising.

In selecting turkeys for breeding, the most important factors to be considered are vigor, size, shape, bone, early maturity and color of plumage. The body should be deep and wide, the back broad and the breast round and full. The head should be of good size and of a clean, healthy appearance. A strong, well-made skeleton is shown by thick, sturdy shanks and straight, strong toes. It should be the aim of every turkey raiser to have a flock of purebred turkeys, even though they

Bronze Turkey.

are sold at market prices. The male at the head of the flock should by all means be a purebred of the best type obtainable. The male is one-half the entire flock, and by continually selecting the best females of a similar type and mating these with a purebred male, one can soon have a flock of uniformly large, early-maturing, strong-boned, long and deep-bodied turkeys of the same color.

Fifteen turkey hens can safely be mated to a vigorous tom. If 25 or 30 hens are kept, two toms should not be allowed to run with them at the same time, but one should be confined one day and the other the next. When two toms are allowed to run together during the mating season they fight badly and the stronger does practically all of the mating.

DISPOSE OF DEAD CHICKENS

Practice of Permitting Carcasses to Lie About Premises is Poor One—Burning is Best.

The practice of allowing dead chickens to lie about the premises or in the brooders and of throwing them over the fence for the hogs to eat, are decidedly bad, and directly responsible for large losses each year by causing and distributing disease, writes M. H. Becker in Farm and Home.

Burning is the safest and easiest method for disposing of dead fowls. The coal-burning brooder stoves will take care of any losses among small flocks and where considerable numbers of fowls are kept a small laundry stove or air-tight heater set up in the feed house or tool room will prove very satisfactory.

PREVENTING WASTE OF FEED

Give as Much Mash as Fowls Will Clean Up in Ten Minutes—Scatter Grain in Litter.

Feed as much mash food at each meal as the fowls will eat up in ten minutes, and remove any that remains. Give as much grain as they will work hard to scratch out of a deep litter.

More feed than this is wasted, and spoils the appetite of the fowls because it is constantly before them.

Sprouted Oats for Hens.

Sprouted oats make the very best of green food for chickens in winter, and they are easy to prepare. A peck of oats will make enough for one day's feeding for a thousand hens. You can use more or less in proportion to the size of your flock.

Isolate New Purchases.

New purchases should never be permitted to mingle with healthy flocks without challenge. They should be kept to themselves for such a length of time as may be necessary to prove that they are not the carriers of some infectious disease.

High Price for Eggs.

Market eggs are going to be scarce and high-priced next season as many farmers sold off their hens last fall when the price was attractive. That's like killing the goose that laid the golden egg.

Feeding Alfalfa.

A safe rule to follow in feeding alfalfa in the dry mash is to use only as much by measure as you do of meat or fish scrap.

WRIGLEY'S

THE FLAVOR LASTS

He's telling her that nothing he received from home brought more joy, longer-lasting pleasure, greater relief from thirst and fatigue, than

She slipped a stick in every letter and mailed him a box now and then. Naturally he loves her, she loves him, and they both love WRIGLEY'S.

CHEW IT AFTER EVERY MEAL

Three of a kind Keep them in mind

A man's idea of a good resolution is one that will stretch. There are now 17 national parks. Nature contributes the substance. Spring provides the opportunity. Wright's Indian Vegetable Pills present Nature's gifts to aid Nature's work, thus producing the ideal Spring medicine. They are tonic as well as laxative. Adv.

Uruguay contains 7,042,212 cattle. The occasional use of Roman Eye Balm at night upon fasting will prevent and relieve tired eyes, watery eyes, and eye strain. Adv.

Fogs indicate settled weather. Send 10c to Dr. Pierce, Invalids' Hotel, Buffalo, for large trial package of Anuric for kidneys—cures backache—Adv.

You cannot fan away a fog.

GIRLS! GIRLS! TRY IT, BEAUTIFY YOUR HAIR

Make It Thick, Glossy, Wavy, Luxuriant and Remove Dandruff—Real Surprise for You.

Your hair becomes light, wavy, fluffy, abundant and appears as soft, lustrous and beautiful as a young girl's after a "Danderine hair cleanser." Just try this—moisten a cloth with a little Danderine and carefully draw it through your hair, taking one small strand at a time. This will cleanse the hair of dust, dirt and excessive oil and in just a few moments you have doubled the beauty of your hair.

Besides beautifying the hair at once, Danderine dissolves every particle of dandruff; cleanses, purifies and invigorates the scalp, forever stopping itching and falling hair.

But what will please you most will be after a few weeks' use when you will actually see new hair—fine and downy at first—yes—but really new hair—growing all over the scalp. If you care for pretty, soft hair and lots of it, surely get a 25 cent bottle of Knowlton's Danderine from any store and just try it. Adv.

Some women find that a new hat is a good cure for a headache.

Important to Mothers
Examine carefully every bottle of CASTORIA, that famous old remedy for infants and children, and see that it bears the Signature of *Dr. J. C. Peck* in Use for Over 30 Years.

WHAT IS LAX-FOS

LAX-FOS IS AN IMPROVED CASCARA A DIGESTIVE LAXATIVE GATHARTIC AND LIVER TONIC

LAX-FOS is not a Secret or Patent Medicine but is composed of the following old-fashioned roots and herbs:

CASCARA BARK
BLUE FLAG ROOT
RHUBARB ROOT
BLACK ROOT
MAY APPLE ROOT
SENA LEAVES
AND PEPSIN

In LAX-FOS the CASCARA is improved by the addition of these digestive ingredients making it better than ordinary CASCARA, and thus the combination acts not only as a stimulating laxative and cathartic but also as a digestive and liver tonic. Syrup laxatives are weak, but LAX-FOS combines strength with palatable, aromatic taste and does not gripe or disturb the stomach. One bottle will prove LAX-FOS is invaluable for Constipation, Indigestion or Torpid Liver. Price 50c.

Men who have been crossed in love think that the joke is on the girl. Kill the Flies Now and Prevent Disease. A DAISY FLY KILLER will do it. Kills thousands. Lasts all season. All dealers or six sent express paid for \$1. H. SOMERS, 150 De Kalb Ave., Brooklyn, N. Y. Adv.

The ball is the oldest toy. Why buy many bottles of other Vermifuges, when one little bottle of Dr. Peery's Vermifuge "Dead Shot" will act surely and promptly? Adv.

Lay not burdens on any but thyself.
