INFORMATION FOR **OUR FARMERS**

State Crops in Good Condition
With the exception of potatoes the condition of the crops in Pennsylvania during the early part of August gave every indication of another bountiful harvest. Reports reaching the Pennsylvania Department of Agriculture from its hundreds of crop correspondents in every township in the State show that the wheat is producing well and that toats will be one of the best crops in years. The weather has been conoats will be one of the best crops in years. The weather has been conductive of good corn growth and the largest acreage that has been planted in the State will be harvested in the fall. Early conditions were not favorable and the crop will not reach

fall. Early conditions were not favorable and the crop will not reach record production.

The Bureau of Crop Statistics in its August report says:

Weather conditions since the breaking up of winter have been ideal for wheat and the indications are that the yield per acre will be approximately 16.75 bushels. Very little damage was done by the Hessian fly this year and practically no damage while the grain was in shock. The wheat was generally thin on the ground but the heads were large and well filled. Reports say that the kernels are large and the quality good. The indications are at the present time that the total yield will be 23, 797,000 bushels.

The prospect for rye is estimated

797,000 bushels.

The prospect for rye is estimated at 95 per cent. compared with an average. The average yield of rye per acre in this state is 175 bushels.
On this basis the average yield per acre this year will reach sixteen and five-eights bushels and the total yield 4,445,000 bushels.

Outlook for oats is good and a libited from being included in feeds.

Chasers by adulterated feeds will be strongely prosecuted. The violations took place in the mixed feeds.

Examinations of "Schumacher Little Chick Feed" manufactured by the Quaker Oats Company of Chicago, Ill., showed the samples badly of whole weed seeds, which are prohibited from being included in feeds

from a cow is reduced, it is difficult, if indeed possible at all, when cooler weather comes, to get the flow of milk back to normal. Plenty of suc-culent feed should be supplied at this time. No better combination of for-age crops for supplementing the dried up pastures can be found than sweet corn fodder and Soy beans. These can be planted together in rows not more than three fet apart. Both crops stand the hot dry weather

cattle can go for protection from flies during the day. Some one of the many fly sprays should be used twice daily. No fly spray yet on the market will be affective long after applied. Most of them, however, afford sufficient protection to make it pay well to use them. A spraygun equipped with one of the new automatic nozzles worked by the form matic nozzles, worked by the fore finger, enables the attendant to go over a large herd of cattle in a very

"Most dairymen practice turning the cows to pasture during the day and keeping them in the yard at night. Much better results can be obtained by reversing this practice Cattle roaming about the pasture in the hot sun during the day would be much better off in the shade and turned to pasture at night when it is

cooler and flies not so bad.
"It is as much to the dairymen's interest to guard against the milk shortage which takes place during the month of August and lasts during the early winter months, as it is the milk dealer. It should be the business of every dairyman, more than any one else, supplying milk to a market, to see to it that his market is always well supplied at all times of the year. Of course, a surplus is as much in the way as a shortage is objectionable. Insufficient milk in a market, causes Insufficient milk in a market, causes more than anything else, diminution in consumption. When the house-wife for some time is unable to buy her usual amount of milk she learns how to get along with less. Latter on when milk is more plenty it is hard to induce her to use it more freely

freely.

"The worst part of it all is, that when supply falls off considerably then the dealer is obliged to go out of the normal milk zone for a supply. Labor I He often brings in a lower grade of in line.

Later when the home supply has picked up and sufficient to meet the demands of the market, this out side supply is in the way. This out side supply is in the way. This out side milk creates a surplus. It is this surplus that has for years enabled the dealers, during certain spring months, to get more milk than they could use at a price less than it cost the producers to market it. Hence, the importance of keeping the supply of milk normal at all times of the year that giving the dairy, gow every posof milk normal at all times of the year by giving the dairy cow every pos-sible advantage during the trying summer months. By supplementing the pastures with plenty succulent feed, increasing the grain ration, pro-tect from flies, providing plenty of fresh cool water and most important of all let us have more of the cows freshen in the early fall months and less in the spring."

less in the spring. Many Adulterated Poultry Feeds

on this basis the average yield per acre this year will reach sixteen and five-eights bushels and the total yield 4,445,000 bushels.

Outlook for oats is good and a splendid crop promised in every section of the state. It is estimated that the average yield per acre will be 34 bushels and the total yield 38,384,800 bushels.

Drought has prevailed all over the state during July and has injured the corn. The corn area is estimated at 1,664,576 acres which is probably the largest acreage ever planted to this cereal. The condition is 87 per cent. of an average crop which indicates a yield of 34.6 bushels per acre and a total production of 57,594,000 bushels. The total crop last year was estimated at 65,260,885 bushels.

There has been an increase of five percent. in the acreage of buckwheat. The acreage is estimated at 331,135 acres. The condition on August 1 was 92 per cent. compared with an average which indicates a yield of 18 bushels per acre and a total production of 55,959,400 bushels.

The condition of potatoes on August 1 is 80 per cent. which is a decline of seventeen points during the month of July. While the dry weather has injured all the growing crops its effect has been more marked on the potatoes than any other crop. Then, the blight, aphis and bugs too have had their detrimental effect.

crops its effect has been more marked on the potatoes than any other crop. Then, the blight, aphis and bugs too have had their detrimental effect. Eighty per cent. of an average crop indicates 67 bushels per acre and a total crop of 21,000,000 compared with 30,000,000 last year.

Area planted to tobacco is estimated at 41,140 acres which is ten per cent. larger than last year. The condition is 96 per cent. The present indications are that the yield will average 1,372 pounds per acre and the total production 56,444,000 pounds. The crop last year was estimated at 51,051,000 pounds.

The acreage of all crops have been more marked on the grown list were for the sale of "Badger Stock Feed" Milwaukee, Wis., containing an excessive amount of oats hulls and the Sutherland Flour Mills Co.'s. "Dairy Dairy Feed" deficient in protein and inferior in composition, as well as "Palmo Mixed Feed" manufactured by Newsome Feed and Grain Company, Pittsburgh, Pa., which was found deficient in analysis and composition not fully stated.

A few firms manufacturing poultry foods have consistently refused to war conditions it was a good opportunity to get rid of large quantities of weed seeds at the rate of from \$4.50 to \$5.00 per 1.00 lbs or \$80 to

pounds. The crop last year was estimated at 51,051,000 pounds.

The acreage of all crops have been increased this year. Notwithstanding the fact that help is scarce the farmers are patriotic and are doing their best to increase the production of food.

The average price of cherries per quart was four cents higher than last year, raspberries six cents and blackberries five cents.

War conditions it was a good opportunity to get rid of large quantities of weed seeds at the rate of from \$4.50 to \$5.00 per 100 lbs. or \$80 to \$100 per ton, the prices charged for Pennsylvania users cannot afford to pay any such prices for these inferior feeds and it is no more than fair that where such unusual prices are charged, only the best food products be supplied. The Department of Agriculture is making a vigorous Milk Flow Falls Off
August is the hardest month of the year to keep up the milk flow. The succulent pasture is gone, flies are bad, and with the excessive heat, August marks the beginning of a milk shortage in our big cities.

Campaign against selling feeds and wherever gross adulterations are found, prosecution against the parties responsible will be immediately started. The dealers of the State handling any poultry foods, who have reason to suspect that they are not up to the standard, August marks the beginning of a milk shortage in our big cities.

"The experienced farmer knows it does not pay to let his cows fall off in milk flow," says Dr. J. N. Rosenberger, dairy expert of the Pennsylania Department of Agriculture at Harrisburg for examination and in this Pennsylania Department of Agriculture at Harrisburg for examination and in this manner co-operate in attempting to prohibit the sale of adulterated prohibit the sale of adulterated products. Feeds labeled to contain "Miscellaneous field seeds and weed seeds" is an indication that the law

soon as possible, as dealers handling such feeds are violators of the Feed Save The Ewe Lambs The time is approaching when the farmers begin to dispose of their ambs. In this connection, Charles E. as well as any crops and make the most palatable feed we have ever fed. As much as the cows will clean upshould be fed twice daily. On most farms where a large number of cows are kept, the summer silo will prove more economical as a means of supplementing the pasture. "Protection from flies should be provided where there is not plenty of low brush in the pasture, under which cattle can go for protection from flies scarcity of other meats mutton is a necessity. Our farmers have shown their patriotism by making every ef-fort to produce the various grain and getable crops to the maximum, and with proper encouragement will boos the sheep industry in Pennsylvania which has already made a turn for the better. Let more sheep—more

the better. State Agricultural Notes York county reports the best average yield of hay to the acre with 1.86 tons. The average for the State is 1.35 tons.

For the first time practically every ounty in the State shows acreage in Only three counties, Bradford, Forest and Warren show the potato crop up to the average condition. In Berks it is 72 per cent. and in Le-

The tobacco acreage has been increased ten per cent. and the condition of the crop is 96 per cent. of

an average.

Only 77 per cent. of the young turkeys raised in average years are reported on the farms this season.

Reports of yields of 100 bushels to the acre of oats have been recorded from Chester County. Cumberland county wheat that has een threshed is reported as running light to the acre. Spring wheat in some of the
