OUR DEPARTMENT OF AGRICULTURE

South to the Front in Road Building
Recent reports received by the United States Department of Agriculture on Federal aid road projects show the South moving forward in the road-building campaign, with projects showing higher grade construction. Of the 16 Georgia projects approved for April, two were for bridges, 7 for concrete and 1 for either a brick, concrete, or bituminous road, the others being for sand-clay roads. The concrete roads will cost from \$30,000 to \$3,000 a mile, indicating the highest type construction, for the cost in the South is usually less than that in the North. Louisiana will build a short bituminous macadam road at an estimated cost of \$36,377 a mile. Virginia has one bituminous macadam and three concrete roads in 9 projects approved.

Learn Sewing in Railway Station
Arizona women are hustlers, those who attend the clothing schools held in that State are typical examples. These clothing schools are conducted by the home demonstration agents under the direction of the United States Department of Agriculture and the State college. The women who attend them are taught various phases of dressmaking and millinery. Such a school was recently held at Salmarita, Ariz. The waiting room at the railway station was the only available place to meet. Before it could be used, the walls and floors needed a thorough scrubbing and they were given it by the committee in charge. Three machines and 2 work tables were installed and 12 women came for instruction the first afternoon. The amount of work accomplished during the entire week by those in attendance was surprising. A home demonstration agent and the committee in charge. One woman, in the three days she attended, made a voile dress, a gingham dress, a skirt (from old materials), a hat, and a baby cap. While doing this, she also minded the baby she had brought with her. When the youngster grew restless, she ran her sewing machine with one foot and rolled the baby carriage back and forth with the other. All during her work, she sang a Dutch lullaby to the baby.

Michigan Increases Milk Consumption
To increase the use of dairy products--especially whole milk, skim milk, and buttermilk--is a project that is being conducted in Michigan under the direction of the Extension Division of the Michigan Agricultural College and the United States Department of Agriculture. In previous years large quantities of surplus skim milk had been poured into the sewers during the "flush" season in the spring and summer because there was no market for it. Every effort is now being made to utilize all of this valuable food.

At Flint, Mich., through the efforts of the home demonstration agent and the antituberculosis nurse, distribution of milk has been established in the factories and schools. The milkmen of Saginaw recently raised a \$500 fund to supplement \$1,500 raised by the Federation of Women's Clubs to provide proper lunches for the undernourished children in the public schools. In addition, the home demonstration agent by a series of demonstrations, is giving instruction in the value of milk. Other cities and small towns in the State have awakened to the need of providing growing children with plenty of whole milk. A marked improvement is shown by the children who now have milk as a part of their daily ration and thus new converts are being made among the parents relative to the importance of using more milk in the diet.

Demonstrate Grain Grading
Demonstrates showing how grain is graded at terminal markets, from the first to the last step, are being shown by Federal grain supervisors to farmers, millers, elevator men, and others in a series of meetings now being held in several States. The officials in charge demonstrate the equipment used by inspection officers at terminal markets and the methods employed in grading grain according to the Federal standards. They demonstrate how to apply the grades with a limited and inexpensive set of equipment at the county mill and elevator. Samples of various grades of wheat, corn, and oats are carried with the demonstrators, besides type trays and charts showing the various grading factors under the standards, and the effect of mixtures of foreign material on the milling and baking quality of flour. Samples of wheat, corn, and oats are taken from cars with the probe. These samples are mixed, and methods of taking an average sample by mechanical means is demonstrated. Special equipment, which tests for moisture, dockage, and weight per bushel, is also used. The main object is to demonstrate methods which the United States Department of Agriculture, in carrying out the provisions of the grain standards act, determines grain grades at principal markets. Prices paid for wheat and shelled corn are based upon the grades of Federal standards. Demonstrations are being held in a number of cities in Ohio,

Indiana, Iowa, Nebraska, Oklahoma, and Texas. Similar demonstrations are to be given in Michigan and other States in the near future.

Reclamation Farmers Sell Wool Together

Farmers on the Belle Fourche, Minidoka, and Shoshone reclamation projects are engaging in the cooperative marketing of wool in their respective localities under the direction of the United States Department of Agriculture. The plan of concentrating the graded wool at central points, where it is readily accessible to the buyers, assures better prices and larger net profits to the producers. Flock owners are paying from 17 to 29 cents a head for machine shearing, an average of about 27 cents being common. A few years ago the cost of machine shearing was only about 10 cents a head. This increase of over 200 per cent is notable as another reason why woolen clothes cost so much.

Beekeeping for Soldiers

Because successful beekeeping requires more work, study, and attention than many people are willing to give it, bee specialists of the United States Department of Agriculture are devoting their efforts to developing better beekeepers of those now in the work rather than make more beekeepers. There is one outstanding exception, the specialists say, to this policy--the returned soldier who is disabled and who is not qualified for the work in which he was engaged before entering the Army. The Government, through the Federal Board for Vocational Education, offers disabled men training in whatever line of work they decide upon for re-education. To give some of them an opportunity to see the advantages in beekeeping, the Bureau of Entomology of the Department recently invited some of the boys from the Walter Reed Hospital in Washington to the new bee-culture laboratory in Somerset, Md. Talks were given on the life history of bees and on the requirements of successful beekeepers, and demonstrations were held in handling bees. A few of the men who had heroically gone through gas attacks and barrage fire took to the bushes when they were handed frames on which the bees were busily at work. Others bravely went into the apiary without veils and removed honey from the hives. Perhaps the most interesting part of the afternoon for the more timid men came after the honey was in a bucket. With hot biscuits and coffee served by the women of the local Red Cross unit, a large quantity of honey was consumed.

While the commercial beekeeper needs to be in fine physical condition to do his best, the bee specialists point out that it remains true that the most important part of a beekeeper is the part above his neck. There are already more beekeepers than are needed--10 times over, perhaps--but it is true that 10 times the present number of good beekeepers are needed, they add.

Michigan to Plant Roadside Trees

The Michigan Legislature recently passed a law to encourage the planting of nut-bearing and other food-producing shade trees along State truck highways and other roads built in that State. The law makes it the duty of the State Highway Commission and the State Commission of Agriculture to look after the setting out of such trees and of the State Agricultural College and the Public Dominion Commission to distribute seed at nominal cost to local officials and private individuals who will set it out. Trees are to be planted at intervals of 20 to 40 feet along the roads. Injuring roadside trees or affixing notices of any kind to them is made a misdemeanor punishable by a fine of \$1 to \$25 and imprisonment of not more than 30 days. This law is in keeping with the policy of encouraging tree planting announced by the United States Department of Agriculture, the department of the Federal Government that administers the Federal aid road law, in cooperation with the States.

\$500,000 Saved by Killing Prairie Dogs

Organized poisoning operations were extended over 1,231,297 prairie dog infested acres in New Mexico last year under the cooperative war measure work of the Biological Survey of the United States Department of Agriculture, the New Mexico State Council of Defense, and the extension service of the New Mexico College of Agriculture. This included the protection of 212,992 acres of crops in all parts of the State, nearly 5,000 landowners taking active part in the work. The expenditures of the Federal and State Governments and of cooperators totaled less than \$60,000. The actual cost for the treatment of range land was less than 4 cents an acre. If average crop returns in New Mexico be placed as low as \$20 an acre, the saving in crops alone for this one season is approximately \$500,000. To this should be added the benefit from the destruction of prairie dogs on over a million acres of range and the consequent increased value in crops and forage for seasons to come. The better organization will result from the experiences of last year, and the Biological Survey and the authorities in New Mexico are in a position to push much more vigorously the work of clearing the State of prairie dogs. Economy and effectiveness have been increased through recent improvements in poisoning methods and, with the help of legislative measures and the hearty cooperation of all ranchmen, it is hoped that the prairie dog will be entirely eradicated before many years.

Little Skim Milk Thrown Away

Apparently very little skim milk was thrown away by milk dealers last year. The United States Department of Agriculture recently sent questionnaires to dealers in Boston, Philadelphia, Detroit and Pittsburgh, cities selected as typical. Only one dealer reported throwing away any considerable quantity of skim milk. Others reported manufacturing their surplus into various

"BEST MEDICINE FOR WOMEN"

What Lydia E. Pinkham's Vegetable Compound Did For Ohio Woman.

Portsmouth, Ohio.--"I suffered from irregularities, pains in my side and was so weak at times I could hardly get around to do my work, and as I had four in my family and three boarders it made it very hard for me. Lydia E. Pinkham's Vegetable Compound was recommended to me. I took it and it has restored my health. It is certainly the best medicine for women's ailments I ever saw."--Mrs. SARA SHAW, R. No. 1, Portsmouth, Ohio.

Mrs. Shaw proved the merit of this medicine and wrote this letter in order that other suffering women may find relief as she did.

Women who are suffering as she was should not drag along from day to day without giving this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, a trial. For special advice as to such ailments, write to Lydia E. Pinkham Medicine Co., Lynn, Mass. The result of its forty years experience is at your service.

products, including cheese, milk powder, condensed milk, butter, milk and casin. In Boston, Philadelphia, and Pittsburgh, the largest surpluses came in May and June. The season of large surpluses came earlier in Detroit, beginning in February and running through April. In the case of some individual dealers who do a considerable manufacturing business as well as a market milk business the surplus appears to have been large throughout the year. The Department of Agriculture reiterates the importance of utilizing all skim milk to the best advantage and points out that the most economical way of handling it can not be determined as a general proposition, but must be worked out by each dealer of himself.

Maryland Canning Club Does Its Bit

Every girl in the Salisbury (Md.) Canning Club gave a glass of jelly to the Red Cross last year. This was for the soldier boys who were in the hospitals. Canning club girls learn to make jelly under the direction of the home demonstration agents sent out by the Department of Agriculture and the State colleges, and their products are of extra quality because they are made just right. Not content with this bit of patriotic service the same club then voted to adopt a war orphan. The money to support one was raised by the members selling enough of their canned products last fall to provide the necessary amount. They plan to pay for the care of the same orphan again this year.

Milk Popular for Lunches

Drink more milk--a healthful food as well as drink--is the slogan advocated in an educational campaign now being conducted by the Dairy Division of the United States Department of Agriculture. Lectures, demonstrations, charts, and moving pictures are being used to teach the food value of milk and the work is carried to all classes and nationalities of people in all parts of the country. Recently in Bridgeport, Conn., two milk specialists in one day spoke before five meetings; two audiences were colored, one was Lithuanian, one Slavonic and one Greek and American mixed--1,600 people in all.

In a certain town in Illinois a factory employing 1,400 men has recently introduced the plan of permitting milk vendors to go through the plant at 10 and 3 o'clock each day with sweet milk and buttermilk.

Most of the men buy a pint each time. The foreman stated that since the drinking of milk has become so popular with the men not only is their efficiency improved, but they are more contented and even tempered.

Specialists are giving lectures in many large department stores, and explain that a glass of cool milk is not only refreshing on a hot day but also furnishes a definite amount of nourishment.

In New Haven, Conn., the manager of one department store had posters made entitled "Why we should drink milk," and sold six milk tickets for 25 cents to the employees, no attempt being made to show a profit on the sales. Half-pint bottles of milk were distributed to the clerks in the middle of forenoon and afternoon. Straws were furnished with each bottle of milk, as the manager believes that too often people drink milk too fast, causing bodily discomfort.

Feeding Fish Heads to Poultry

A simple and inexpensive substitute for meat scraps which, often, are hard to obtain at the average butcher shop, is to utilize fish heads in the poultry ration. Arrangements usually can be made with local fish dealers to save these heads, particularly if the poultryman will furnish buckets in which the refuse may be kept until he calls for them. As they came from the dealer's shop, the fish heads are tough and covered with heavy scales and gristle. However, underneath is fine tender meat which the hens relish keenly. The poultryman can soften the coarse outer shell by boiling the fish head in water for 5 to 10 minutes and then pouring off the water and throwing the fish heads in among the chickens. In many instances the dealers are glad to get rid of the fish heads, and on the basis of actual food value the poultry keeper can afford to pay 10 or 15 cents for a quart of fish heads which provide a satisfactory protein-containing food for his flock.

CONFIDENCE

Confidence is an abiding faith in the honor and integrity of the person or institution in which the trust is reposed.

That this bank merits and receives the Confidence of the public, is shown by the fact that for the past five years, our Certificates of Deposit have doubled in amount each and every year over what they were the year before; which shows that we not only have our old customers come back every year but are also continually getting new ones and making new friends.

Another large item that helps Confidence is the knowledge that we are very careful to whom we lend the money that you deposit here and most everybody knows that this bank does such very good financial "house-keeping" that in five years we did not lose a dollar on a bad loan but that we gained a Surplus of \$70,000.00.

We keep all bank business strictly Confidential and your neighbor will never find out that you have money here unless you tell him yourself.

We Pay 5 Per Cent Interest on Money for a Year

PEOPLES BANK of MAYTOWN, Maytown, Pa.

Capital, \$50,000.00 Norman F. Aratz, Cashier.

Concrete Building Material

What Are You Going to Build This Year?

A House, Barn, Garage, Factory or will you make repairs of any kind? There are some things to consider by all who contemplate building. Buildings should be attractive, economical and durable. Now bear in mind that concrete has come to stay

and it is rapidly replacing brick, lumber and cut stone on account of their high cost. Then again you want fire proof construction. Any style and color of building block and ornamental work made to order. Come and see by comparing prices.
