

— and from there we went to Japan —

Talk about adventures! Men in the Navy come home with the kind of experiences that most chaps read of only in the books.

Here's your chance! Uncle Sam has, as you know, a big Navy and gives red-blooded young fellows like you an opportunity to step aboard and "shove off".

What will you get out of it? Just this: A chance to rub elbows with foreign folks in strange parts of the world.

The chance for good honest work on shipboard—the kind of work that teaches you something real; the kind of work that puts

beef on your shoulders and hair on your chest.

You will get 30 care-free vacation days a year, not counting shore leave in home or foreign ports.

You will have the kind of comradeship in travel that sailors know.

You will have regular pay over and above your meals, lodging and your first uniform outfit—good stuff all of it.

You can join for two years. When you get through you'll be physically and mentally "tuned up" for the rest of your life. You'll be ready through and through for SUCCESS.

There's a Recruiting Station right near you. If you don't know where it is, your Postmaster will be glad to tell you.

To any Father and Mother— In the Navy your boy's food, health, work and play, and moral welfare are looked after by responsible experts.

Shove off! -Join the U. S. Navy

OUR DEPARTMENT OF AGRICULTURE

Scrub Sire's Foes Line Up

Reports from many parts of the country indicate that the nation-wide crusade for better live stock through the use of purebred sires of good quality is continuing to win enthusiastic recruits. Arizona has tested its interest by amassing 1,000 enrollment blanks. Professor of animal husbandry in the University of California writes that, though he lives in the midst of a bluegrass country, far famed for its fine breeding, he feels that there is need for the scrub sire in his locality and offers to drive out the scrub sire. South Carolina estimates that about 800 flocks of owners will banish scrub sires from their farms within the next year.

The emblem granted toll who keeps and use only pure-bred sires bears the name and address of the live-stock owner, date enrolled, and a serial number signifying a total number of emblems issued date. It measures 8 by 10 inches, printed in two colors, and carries the seal of the United States Department of Agriculture. Being the seal space is left for signature. The emblem is made of metal. The Department of Agriculture is emphasizing the fact that this emblem is an official token Uncle Sam's direct interest in the work of every man seeking to improve his live stock. It also indicates that the Government recognizes that quality in so far as the betterment of live stock is concerned.

Officials of the Bureau of Animal Industry expect that stock raisers will take special pride in displaying these emblems. Later, when enrollment becomes large, it is predicted they will point to the numbers on their emblems as evidence that they were among the early recruits to the campaign.

Farmers Form County Councils The movement to organize the farmers of Tennessee for mutual benefit and better agriculture has been given special impetus in recent months by the creation of county councils of agriculture. More than a dozen of these organizations have been formed in that State. Each council is designed to serve as a local center for all activities affecting rural life and interests in its county. These organizations are being fostered by the Department of Agriculture in cooperation with the college of agriculture of the University of Tennessee, and other State agencies.

The council in Blount County has already held a successful together picnic, while cattle sales cooperative buying, and the promotion of community betterment are other projects with which various councils are concerning themselves. It is anticipated that within the next 6 or 12 months the movement will spread to more than 30 counties. A State federation of these bodies is also a possibility.

The plan of organization of the council is simple. No one draws a salary, the county agriculture agent acting in an advisory capacity for the unit. The membership fee, usually used to rent headquarters, which serves as a meeting place for farmers when they come to town.

Electricity in Logging Camps A lumber company cutting timber from one of the National forests has installed over a mile of electric transmission line through the woods to supply an electric logging camp with power. It is planned ultimately to use electricity for the entire camp. Current is developed at the mill. Since many forest fires start from logging equipment and camps the government foresters regard the introduction of electrical equipment with much favor.

United States Helps Plan Farmhouses

It does not take any more to build a house which will be sturdy and convenient than it does to get a homely and inconvenient dwelling. The home-demonstration agents of the South are telling the people in their territories. The State agricultural colleges and the United States Department of Agriculture are backing up this "home beautiful" movement. In some States the work is yet in the lecture stage and in others demonstration homes are erected which are to serve as good examples of architecture in that community.

Such a home was built last summer in Talladega County, Ala. Not only its plans, but its decoration and landscape setting as well, have been made according to the designs of the Government experts. It is up-to-date in every detail, but strict economy has been used in the plans. Beauty of line and material are to be found in this farm dwelling. So much care has been put on the floor plans in so many labor-saving devices have been built in that housekeeping in a lumber cut on the farm and it is located on a main thoroughfare, where a comfortable, well-planned, and pretty farm home can be a source of inspiration.

Biggest Hog Shipment Marketed The largest individual hog shipment ever received at the Kansas City market, consisting of 949 hogs which averaged 280 pounds apiece, a total of 265,720 pounds of pork of the hoof, recently was received from a Livingston County, Missouri, farmer. These porkers had rail service de luxe, as the 16 cars they occupied were hauled as an special live-stock train. The extra attention accorded this shipment was worth the trouble, as only three hogs, or about three-tenths of 1 per cent were lost.

Disinfection House Ready All along the Texas-Mexican border, equipment has been completed of the disinfection houses erected by the United States Department of Agriculture for the purpose of making sure that no larva or moth of the pink boll worm of cotton enters the United States. What is known

as the pot med of disinfecting, an interest of and cleansing the outside was continued on September 3, and timely fumigation that now accept as meeting the requirements of the Federal Horticultural Board fumigation performed by the employes of the board in the disinfection houses.

Crops have been fixed in such a way to cover the cost of the chemicals and labor required in fumigation. The cost for a railroad car and 50 cigs for any other kind of vehicle. Cargos for fumigation of light not carried in vehicles will be adjusted to cover actual cost.

Farmers Uite to Fight Rats Under his name in Palm Beach County, Fla. The rodents in that County have multiplied with such rapidity that some farmers fear 75 per cent of their potatoes and peanuts have been destroyed. Owing to the extent of the territory over which the rats have been roaming, nothing short of a widespread cooperative action could be effective, consequently, the local county agent has taken the matter in hand. A. H. taken the territory, he laid out a system of offensive campaign. Under this plan the farmers have undertaken to place poison with various sorts of baits all along the lake front on specified days.

Much of the region covered in this fashion is grown up with weeds or is still uncleared, and, therefore, the task is of considerable magnitude. However, it is anticipated that by all crops will benefit directly from the campaign and that the expenditure of the fund, which was contributed by local business men, will prove a profitable investment.

American Canning Spreads

Not only will the French people profit by the lessons in home canning and drying which have been given their agricultural leaders this summer by canning experts of the United States Department of Agriculture, but Syrians, Egyptians, Armenians, and Algerians, as well, are to learn American food-preservation methods. The French Government arranged so that all its agricultural leaders and teachers could attend the demonstrations which were given at Grignon by the Americans. Beside the French men and women who took the course, the woman in charge of a large Government school in Algeria, two men from Syria, and two from Egypt attended the lectures. The Algerian teachers, in addition to the regular demonstrations and practice periods, took extra work outside Syria will teach home canning and drying in Algeria this year.

One of the men from Syria who was a student at the canning course is a doctor of science and a director of the observatory in Syria. The other is supervisor of all the Jesuit missions in Syria and Armenia. They plan to introduce the work to Syria and Armenia. The two men from Egypt had just graduated from college and were ready to leave for their home in Cairo when the canning demonstrations began. They became so interested that they postponed their departure and attended all the lectures. They also asked for instruction in county-agent organization.

These Egyptians hope to come to America in the near future and study American extension methods. The work in France will not stop with the return of the American teachers, for the leaders who took the course will teach the French people home canning this fall and the American committee for devastated France is taking up the work. A bulletin on canning has been written by the American home economic workers for the use of the French Government.

Carrier Pigeons Aid Foresters

During the recent severe forest fires in certain sections of the West, carrier pigeons were successfully employed to convey messages from fire fighters "at the front" to headquarters. The test of the birds for this use was on a limited scale but has encouraged the Forest Service officials to believe that they can be employed profitably on a larger scale.

The experiment lends special interest to a plan which is being considered for cooperation between the Department of Agriculture and the Navy Department, under which carrier pigeons and equipment of the latter department may become available. To establish a successful carrier pigeon system it will be necessary to lay plans during the coming winter, to have the posts properly located, and get the birds acclimated on their long flights. Flights of 600 miles in a single day have been made, while a distance of 140 to 200 miles means a two or three hour flight for the average bird. Since the distances which would be covered in Forest Service work are considerably less than this there appears to be no difficulty in this regard. In most instances the flights from fire fighting areas to headquarters would be considerably less than 50 miles. The value of the birds would be particularly great in mountainous regions where travel is difficult.

Young Veal Is Good Food

Until five years ago, meat of calves three weeks old or less was regarded with suspicion and was not regularly salable. It was believed to be indigestible, lacking in nutrition and not generally wholesome. This seems to have been an American prejudice without any foundation, for it is a standard article of diet in Europe and no ill effects result there from eating young veal. The cause of meat poisoning resulting from the eating of veal have been shown to be due to poison-producing bacteria which contaminated the meat.

Experiments conducted by the Bureau of Animal Industry, United States Department of Agriculture, show that for food purposes, a pound of meat from a young pig is as good as a pound of the most mature beef. Following the conclusive experiments, the Federal meat inspection regulations were amended so as to permit passing carcasses of young calves which met with the amended

requirements. There are more than 20,000,000 dairy cows in the United States and they produce fully 10,000,000 calves every year. About half of these calves are heifers and the other half are bull calves. In the past the heifers have been raised by dairymen, but a large number of the 5,000,000 bull calves have been killed at birth, because the milk they would consume in being brought to marketable weight as veal was worth more than they would bring on the market as veal calves. Under the present regulations, it will pay the dairymen to dispose of his young, well-developed calves for food.

Monthly Record for New Road Projects

An increase for August compared with July in the total mileage of Federal aid project statements approved by the Secretary of Agriculture is shown in the latest report prepared by the Bureau of Public Roads of the Department of Agriculture, the total for August being 1,246.92 miles as against 1,168.06 miles for July. The 125 project statements approved in August involved improvement at an estimated total cost of \$18,238,303.19, on which Federal aid in the amount of \$7,171,794.84 was requested. The 148 project statement approved in July involved improvement of highways at a total estimated cost of \$19,012,450.85, on which Federal aid to the amount of \$8,461,571.58 was requested.

Farm Bureau Plan Federation

Further steps leading to the formation of a national federation of farm bureaus have been taken. The first step was made when delegates from various State farm bureau associations met at Ithaca, N. Y., in February, 1918. The Iowa State Farm Bureau Federation recently invited the president of the New York federation to address a large gathering of Iowa Farm Bureau members in Des Moines. These two States have been very active in furthering a national federation of State farm bureau associations. A national convention, which the States have convention, will be held in Chicago at the same time the American Association of Agricultural Colleges and Experiment Stations holds its annual meeting, November 12, 13 and 14. It is hoped by those interested practically to complete at this meeting the arrangements for a permanent national organization.

Double Deckers for Live Stock

Use of double-deck auto trucks for hauling live stock is gaining in popularity in the Ohio Union Stockyards, according to a report of the United States Department of Agriculture. Specially constructed trucks have increased greatly during the current summer as the farmers in this way are able almost to double the tonnage they formerly could haul to market. Trucks of this type are being used extensively in the transportation of feeder sheep from the market to the grazing districts.

New Kind of Baseball Bats

The present-day penchant of manufacturers and others for substitutes threatens even those trusted baseball bats to which every big league hitter looks to perpetuate his fame. The forest products laboratory of the Forest Service, United States Department of Agriculture, has recently been manufacturing experimentally a number of laminated wood articles with the idea of utilizing small lumber stock. Baseball bats are among the articles which have been experimented on. In practically every instance the products made from this material have given as good service as those made in the regular way. Whether they would satisfy the critical demands of professionals who inspect their white ash clubs with zealous care is a matter as yet undetermined. The fact remains, however, that the initial success in the experiments cited seem to indicate that there is a large field heretofore undeveloped in which laminated wood can be used successfully. Attention is called to the fact that, while some of the bats have broken under severe usage, the breaks were not in the glued joints, indicating that the artificial joining has been accomplished in an entirely satisfactory manner.

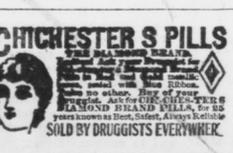

Shoe lasts were also made of laminated wood and after undergoing the severest usage in various factories and shoe-repair shops. Hat blocks of a similarly built-up material were tried out thoroughly and proved very satisfactory. Recently constructed specimens of wagon bolsters which were made up with laminations carefully joined just before gluing are standing weather tests well. A wagon company is giving these articles a trial.

Relieves a Corn In 10 Minutes

The minute you apply Tasso's Corn Remedy you say good-bye to all foot troubles. Applied in 10 seconds. You get relief in 10 minutes and absolute cure in 3 to 4 days.

Tasso's Corn Remedy banishes corns and blisters forever. Corns come out, roots and all. Bunions are quickly reduced and cured. Callouses as big as a silver dollar have been removed in a painless harmless way. Doctors, druggists, nurses, preachers and a multitude of satisfied customers praise Tasso's Corn Cure. Price 25c ask your druggist for it. For sale in Mount Joy at
