A FEW FAVORITE BREEDING PLACES FOR STABLE FLIES

Certain agricultural practices favored greatly by the development of the stable fly, according to specialists of the United States Department of Agriculture. The fly breeds most commonly in straw and horse manure or in a mixture of the two. The custom of allowing the manure from the horse stable to accumulate just outside the stable doors insures the presence of stable flies at all times when climatic conditions are suitable for breeding. Allowing barnyards, especially around dairies, to become knee-deep in manure, is also favorable to the production of flies.

PHILADELPHIA DIAMOND GRID BATTERY With the PHILCO Slotted Retainer Guaranteed For Two Years MOST Automobile Starting and Lighting Batteries are not guaranteed at all. Some are guaranteed for short periods. Others are guaranteed by the Service Stations that sell them and not by the manufacturers. None of these gives you the business-like protection and assurance of continuous, satisfactory service that you should have. Mind you, we do not claim that there are no other good batteries—for there are. But we do claim that the Philadelphia Diamond Grid Battery, with its two exclusive engineering features—the Diamond Grid—built like a bridge for strength—and the Philco Slotted Retainer, is more than a "good" battery. It is a battery whose engineering betterments justify the manufacturer's backing their confidence in it by its Two Year Guarantee. Schock Car e MOUNT JOY, PA.
