Newcomer, Mr. & Mrs. Henry Bear, Mrs. George Hoffman, Mr. George Beimsderfer, Esther Nemcomer, Gertrude Young, Martha Newcomer, Warren Kurtz and Elmer Newcomer.

GEMS NOT TRUE TO COLOR
Popular Fallacy to Ascribe to Precious Stones Hues That May Be Called Definite.
Story writers talk of the sky being as blue as a sapphire, or of a wild beast's eyes glowing as yellow as topaz.
Most of us are under the impression that we can recognize gems by their colors, and that certain colors belong definitely to certain stones.
Quite a mistake. There is hardly a precious stone which is always true to color. Diamonds, of course, vary greatly. The famous Hope diamond is a real and most beautiful blue.
Green diamonds are found, and others of a lovely crimson, but these are very rare. Black diamonds are common enough.
Black pearls are rarer, but are found. Pink pearls are greatly prized. One of the finest in existence was found in a fresh water mussel in the Mississippi river and is valued at \$15,000. Off the Pearl Islands, south of Panama, pearls are found which are lead-gray and also green.
Sapphire mines in the Rocky mountains produce stones which touch the whole color scale from blue and red to an exquisite purple.
In Rhodesia is found a topaz of a most lovely pale blue. Yet the chemical composition of the gem proves it to be identical with the yellow topaz.
The colors of most gems are more or less fugitive. That is, under certain circumstances they are liable to fade. Take two rubies exactly similar, shut one in the dark, and leave the other exposed to full sunlight, and at the end of two years there will be a distinct difference between them. The one that has been exposed to the light will be decidedly paler than the other.
Similar results may be observed with both emeralds and sapphires. Garnets also will turn lighter, while in the case of the topaz, sunlight ends by diminishing and dulling the color of this stone.—Stray Stories.

Chief Suffragette.
A friend who had known Thomas Riley Marshall for a great many years saw him after the cares of office had been removed from his shoulders, just as he was about to board a Washington street car. He stopped and asked him:
"Tell me, Mr. Marshall, what can be done to make the office of vice president a great office?"
"I'll tell you in one minute, and I won't ever have to miss this car," said Mr. Marshall. "There isn't anything you can do. The vice president will always be chambermaid to the king."
Dropped 40 Per Cent.
Kerosene was priced at 30 cents per gallon a year ago; 2 cents is the figure now.

LIEUT. NEWPHER WAS BURIED HERE

(Continued from page 1)
tion they were shelled quite frequently. The day Newpher was killed the boche sent over only four shells, three of which did more dirty work with that regiment than could have happened during a battle. They killed and wounded over a hundred men and also about twenty or thirty horses. I read all the reports in regard to the affair, but no names were mentioned. The Supply Officer of Newpher's Outfit was in the office last night, and during our conversation about the affair he told me about Newpher. Of course, you have heard all about it by the time you receive this letter, but I thought I would tell you a little more than I suppose you or any one else will know until I return.
On Friday, June 10, Dr. J. J. Newpher, this young soldier's father, received a telegram that the body arrived in Hoboken, N. J., and would be forwarded. It arrived here accompanied by a military guard last Wednesday evening at six o'clock. Undertaker H. C. Brunner removed the body to the home of his parents Dr. J. J. Newpher, on East Main street from which place the funeral was held on Friday.
Our respect to such deserving heroes was shown in this manner. Every industry in the town was closed that afternoon as well as all the business places during the funeral. Hundreds of flags were displayed at half mast.
The American Legion met at its quarters on West Main street and with the beat of muffled drums marched to the Newpher residence.
Preaching services were held at the house with Rev. M. F. Davis, of the Methodist church, Rev. J. E. Deacon, of Grove, Pa., a former Methodist pastor here and Rev. James M. Fisher, of the Presbyterian church officiating.
Such floral offerings are seldom seen and showed the respect this young man so rightly deserved from friends, relatives, societies and others.
Six of Lieutenant Newpher's closest friends, four of them classmates and one a member of his same company in France when he met his death, and the other soldier a member of President Wilson's guard while in France, served as pallbearers. They were Capt. Arthur P. Schock, of Beaver, Pa., John Bowman, of York, Bysshe Heilig, Henry Strickler and John Longenecker, of this place and Mr. Moore of Wrightsville.

Sixty-four members of the American Legion stood at attention in double rank as did six armed guards as the remains were brought from the house. The Legion led the funeral procession to the Mt. Joy cemetery while eight footmen, four on each side, marched aside the hearse bearing their comrade to his last resting place.
After the exercises at the grave by the pastor in charge, the American Legion conducted brief services which were closed by a squad firing three salutes over the grave.
James O. Newpher was born in Mt. Joy, July 27, 1893 and died from wounds on Sept. 29, 1918. He was then aged 25 years, 2 months and 2 days. He was the son of Dr. and Mrs. John J. Newpher of this place. He graduated from the Mt. Joy High School and Franklin & Marshall Academy, at Lancaster. He also attended State College and was a member of the S. A. E. Chapter there. He was also a member of Casiphia Lodge No. 551, F. & A. M. of this place. His parents, his wife Mrs. Matilda Mumma Newpher and one sister Miss Mary Newpher, all of this place, survive.

Citation for Bravery
Mrs. James O. Newpher received from William P. Worthington, Regimental Sergeant Major of the 11th U. S. Infantry, a copy of the citation accorded her husband. He stated that he was personally acquainted with Lieut. Newpher and that he was only a few feet away from him at the time he received the wounds which resulted in his death. Major Worthington also writes that the following citation is the very next thing to a Distinguished Service Cross and should be preserved.
The citation is as follows:
Headquarters Fifth Division American Expeditionary Forces A. P. O. No. 745 June 27, 1919
GENERAL ORDERS:
No. 21
EXTRACT
The following officers and men are cited in order for distinguished conduct in action:
1st Lieut. J. O. Newpher, 11th Infantry (Deceased).
During the St. Mihiel offensive, September 12-16, Lieut. Newpher, then Battalion Gas Officer, displayed extraordinary bravery and devotion to duty by personally inspecting the outpost battalions and giving warning to the presence of gas. He greatly assisted in the assembly of scattered units and by his untiring efforts and devotion to duty, aided greatly in the success of the operation.
By Command of Major General Ely: C. A. TROTT, Chief of Staff.
Hqs., Camp Gordon, Ga., Sept. 19, 1919
Approved for wearing of silver star. E. M. LEWIS
Major General, U. S. Army Commanding

I have a fine small home in Hammondsburg, along the Lancaster and Harrisburg pike, 7 room frame house, concrete porches, 700 sq. ft. walk, frame stable, hog pen, excellent well of water, 1.3-acre of land. Resultful place to live. Will take \$195 for a quick sale. J. E. Schroll, Mt. Joy, Pa.

FARMERS' COLUMN

CARE OF GROWING CHICKS DURING WARM WEATHER

The care of growing chicks, especially during warm weather, is most important. Every boy or girl member of a poultry club should give them the best of attention if success is to be had. The baby chicks may be smart little fellows from strong vigorous parent stock, and they may have been brooded carefully for the first two or three weeks, but unless they receive proper care and management during their growing period they will not develop properly, and many of them will be lost through disease or sickness. The chief essentials to proper growth are good coops or houses, cleanliness, proper feed and water, shade and free range.
A variety of feeds, with fresh, clean water, is necessary for chicks to grow properly. Perhaps the three most necessary for rapid growth are grain feed, green feed, and dry mash. Poultry specialists of the department say that in addition to the green feed and dry mash, which should be provided regularly, a grain mixture should be fed night and morning, giving as large a quantity as the chicks will eat clean but no more. A good grain mixture for growing chicks consists of three parts cracked corn, 2 parts wheat, and two parts hulled oats. When available, kafir or rolled or hulled barley may be substituted for hulled oats. In localities where hulled oats, kafir, or rolled barley can not be obtained, or too expensive, a mixture of cracked corn and wheat only may be fed until the chicks are old enough to eat whole oats, when 2 parts oats may be added to the corn and wheat mixture.
Every coop and poultry house used for growing chicks should be kept clean at all times. Sickness or disease starts usually in places where the litter, and in such places lice and mites are always more plentiful. Coop and poultry houses should be cleaned and sprayed once a week, and clean shavings, chaff, or sand put on the floor. Examine the chicks and houses often for lice and mites, and if found they should be got rid of at once by following the directions in Department Circular 16, Lice, Mites, and Cleanliness, which may be had, free upon application to the Division of Publications, United States Department of Agriculture.
CHERRIES MAY BE EASILY DRIED FOR HOUSEHOLD USE
The month of June and July are the cherry season throughout the country. Every boy enjoys canned cherries, but it is not so generally understood that drying offers a simple and economical method for preserving cherries when canning is inconvenient.
Sweet cherries especially the dark, solid-fleshed varieties, such as the Tartarian, Bing, Lambert, and Dike-man, may be employed for the same purposes as raisins. The sour or pie cherries are also easily dried. The fruit is washed, picked over to remove stems and imperfect specimens, then spread in a single layer on the trays and placed in the drier.
If the fruits are very large, they may be pitted before drying, but large quantities of pits, which contain a considerable portion of the sugar of the fruit, are lost in the process. If this juice, which amounts to 35 to 50 gallons per ton of fruit, can be saved and combined with apple or other juices in the making of jellies, pitting may be attempted, otherwise the process is both time-consuming and wasteful. The drier should not be hotter than 120 degrees F. when fresh cherries are placed in it and the temperature should never rise above 150, degrees, as cherries especially, are easily injured by overheating.
EXCESSIVE MOISTURE IN CORN CAUSES LOSS IN EXPORTING
Large quantities of corn shipped from the United States are lost in Europe in a heated, damaged, and spoiled condition. According to the Bureau of Markets, United States Department of Agriculture, the amount of moisture in corn and in the other grains as well, is the primary factor determining its capacity to carry safely in ocean transit without deterioration.
Corn in which the moisture content is sufficiently low will carry safely under ordinary conditions of ocean transportation for any reasonable length of time during any season of the year, no matter where it is stored in the vessel, while corn containing a high moisture content is constantly in danger of heating at any time owing to a variety of contributing causes. Thoroughly airtight corn contains from about 12 to 13 per cent of moisture. Such corn may be shipped for export at any time under ordinary conditions with little or no danger from heating in transit. This is practically true when the corn contains up to 14 per cent moisture, provided fermentation has not started.
The fact that certain lots of corn contain higher percentages of moisture does not necessarily mean that they will not stand ocean shipment safely. The corn may be perfectly sound, the voyage may be short, the air temperature at the time of loading and during the voyage may be low, no disturbing influence, such as heat radiating from the ship's boilers, engine rooms, and shaft tunnels, may be encountered, and the corn kept practically in cold storage. Under such most favorable conditions corn with a relatively high moisture content may sometimes be carried safely.

POISONED BAIT IS BEST FOR KILLING CUTWORMS
Cutworms appear in early spring and cut off the stems of young plants at the surface of the ground. The better remedy is poisoned bait. For a small garden mix 2 level tablespoons of white arsenic, arsenate of lead, or Paris green into 5 pounds of dry bran. Add from 4 to 6 quarts of water, in which half a pint of sorghum or cheap molasses has been mixed. After the mash has stood several hours scatter it thinly over the garden or a small quantity at the base of the plants. Put the poison on late in the day, so it will be moist during the night when the cutworms feed.

Ford
THE UNIVERSAL CAR

The Ford Sedan is the favorite family car, seats five comfortably. While an enclosed car with permanent top, it has large windows, and may in a minute be changed to a most delightful open car with always a top protecting against the sun. In inclement weather it is a closed car, dust-proof, water-proof, cold-proof. Finely upholstered. Equipped with electric starting and lighting system and demountable rims with 3 1/2-inch tires all around. A real family car. Anybody can safely drive it. It has all the conveniences of an electric car with the economy which goes with Ford cars, low cost of purchase price, small cost of operation and maintenance. Won't you come in and look at it?
