Goodrich
announces
new tire prices

—lowest cost mileage ever known

Effective July 20th, Goodrich establishes a revised price list that is a base line of tire value. It gives the motorist the buying advantage of knowing that whatever size tire he selects is of the same quality—the Goodrich one-quality standard. It gives him the longest mileage, the most satisfactory service and the highest quality his money can buy. Results will prove that it is impossible to buy tire mileage at lower cost.

Think of being able to buy

Silvertown Cords

at such prices as these:

| SIZE | BASE LINE PRICE | SIZE | BASE LINE PRICE |
|------------------|-----------------|------------------|-----------------|
| 30 x 3 1/2 CL. | \$13.50 | 34 x 4 S. B. | \$30.85 |
| 31 x 3.85 CL. | 15.95 | 32 x 4 1/2 S. B. | 37.70 |
| 30 x 3 1/2 S. B. | 15.95 | 33 x 4 1/2 S. B. | 38.55 |
| 32 x 3 1/2 S. B. | 22.95 | 34 x 4 1/2 S. B. | 39.50 |
| 31 x 4 S. B. | 26.45 | 35 x 4 1/2 S. B. | 40.70 |
| 32 x 4 S. B. | 29.15 | 33 x 5 S. B. | 46.95 |
| 33 x 4 S. B. | 30.05 | 35 x 5 S. B. | 49.30 |

No extra charge for excise tax. This tax is paid by Goodrich

New base line prices are also effective on Goodrich Fabric Tires

| SIZE | BASE LINE PRICE | SIZE | BASE LINE PRICE |
|-------------------------|-----------------|---------------------|-----------------|
| 30 x 3—"55" | \$9.65 | 32 x 4 S. B. Safety | \$21.20 |
| 30 x 3 1/2—"55" | 10.65 | 33 x 4 S. B. Safety | 22.35 |
| 32 x 3 1/2 S. B. Safety | 16.30 | 34 x 4 S. B. Safety | 22.85 |

No extra charge for excise tax. This tax is paid by Goodrich

This revised price list affords the motorist as definite a guide to tire prices as Goodrich Tires are the definite standard of tire quality.

BEST DEPTH OF CULTIVATION

When Corn is Eighteen Inches High Roots Will Meet Across 3 1/2-Foot Row in Friable Soil.

When the stalks of corn are 15 inches high, the roots have met across a 3 1/2-foot row in light, friable soils. Deep cultivation at this time will cut many of the roots and check the growth of the plants. A good rule to follow is to cultivate deep early in the season, and shallow later when the plants are larger.

ADVANTAGES OF CULTIVATION

It Helps to Keep Weeds Down and Conserves Moisture Necessary for Vegetables.

Keep the hand cultivator going to preserve a dust mulch and to kill weeds. Either pull or hoe the weeds out of the vegetable rows. The best time to kill weeds is when they have just pushed through the top of the ground. Frequent shallow cultivation will do this as well as conserve moisture.

VIRGINIA COUNTIES COMPETE

Three breed associations, representative of prominent breeds of beef cattle, have appropriated funds to be given to the county in Virginia replacing the greatest number of scrub sires with purebreds, according to reports received by the Bureau of Animal Industry of the United States Department of Agriculture. As a result more than 100 scrubs have been placed by purchased animals in the last few months.

GIVE YOUR BEES NEEDED AIR

Reversible Bottom Board Furnishes Either Narrow or Wide Entrance as May Be Desired.

It is too much to ask of a hard-working bee that it hang outside the hive during its hours of rest because the interior of the hive is too hot and poorly ventilated. "One remedy is to tip up the front of the hive one inch from the base board, using a tapering splinter or wedge under each side," says A. C. Burrell, extension entomologist of the Missouri College of Agriculture. "Or buy a reversible bottom board, which furnishes either narrow or wide entrance as desired. We do not advise setting the splinters back a half-inch as this artificial ventilation interferes with the fanning bees. Keep your bees in a good shady location for the hot summer months."

SEVERAL DISEASES OF SOIL

Only Way to Overcome Fungous and Bacterial Ailments is to Let Land Remain Idle.

There are several diseases of vegetables which live over in the garden soil from one year to the next, and if the same crop is planted in the same soil year after year it will be but a short time until the crop will prove a loss. These are mostly fungous and bacterial diseases and the only practical way to overcome them is to allow the land to lie idle for two or three years or to plant a crop which is immune to the disease.

SCATTER MANURE ON FIELDS

Not Advisable to Permit Escape of Gases and Plant Food—Haul Away Often.

Different farmers have different ways and means of caring for their barnyard manures, but suffice it to say, do not let it become exposed to the rain nor the sun; if possible, keep it piled up in order to prevent the escape of gases which are rich in plant food; as often as practicable, haul the manure to the fields, scatter and immediately plow it under.

PLANT ONLY BEST CORN SEED

Possible to Secure Results of Another Man's Life Work in Breeding and Selecting.

Perhaps in no other farm crop is there as little excuse for planting poor seed as in corn. It takes only about a peck to the acre, and the best of seed can be planted with little expense. When one can secure the results of another man's life efforts in breeding and selecting, the small cost comes back many times the very first year.

BETTER TILLAGE FOR FARMS

Small Acreage is More Profitable When Properly Cared for Than Large Tracts.

A small farm well tilled will give better returns than a large acreage poorly cared for. If more farmers would learn this lesson, which the gardener learned long ago, we would have better farms and the owner would likely have more ready money.—LeRoy Cady, associate horticulturist, University Farm, St. Paul.

BIG IMPORTANCE OF TOMATO

No Single Garden Crop So Easily Grown—Success Depends on Soil and Cultural Methods.

There is probably no single garden crop so easily grown, and at the same time playing so large part in the winter supply of canned goods, as the tomato. Therefore, in the face of the high prices of canned and uncanned food stuff, more attention should be given to this valuable crop, to provide an abundant supply for the home and local market.

Successful tomato growing is largely dependent upon judicious soil selection, fertilizer application, and cultural methods. The best soil for tomatoes is the well drained garden loam soil.

SWEET CLOVER FOR PASTURE

All Types of Plant Make More or Less Undesirable Hay Because of Its Coarseness.

Under most conditions sweet clover can only be used profitably as pasture. When it is decided to use it for this purpose, the cattle should be put on it and not be allowed other pasture until they start to eat it. This will take a day or two, after which they will thrive on it. All types of this plant make a more or less undesirable hay because it is coarse and has comparatively few leaves. For the best quality of hay, it should be cut just as it starts to blossom.

WASH ALL MILK CANS AS SOON AS EMPTIED

Most Dealers Have Appliances for Cleaning Utensils.

Hotels, Restaurants and Others Buying Milk in Wholesale Quantities Are Particular in Giving Attention to Containers.

(Prepared by the United States Department of Agriculture.)

The milk can has the same relation to the wholesale trade as the milk bottle has to the retail trade, and it is just as important that it be washed immediately after being emptied, says the United States Department of Agriculture. Milk dealers have appliances for washing and sterilizing the cans, but this does not excuse the buyer from rinsing them before they

Sterilizing Dairy Utensils is an Important Factor in Keeping Milk Sweet.

become sour as a result of the multiplication of bacteria in the film of milk left in the can. Cans that become foul in this way are hard to clean when they arrive at the plant. Investigations show that hotels, restaurants, bakeries and other places which buy milk in wholesale quantities do not always give proper attention to the containers. As soon as the cans are emptied they are placed on the doorstep or left in a warm room until collected by the dealer. They return to the plant reeking with bacteria, and the mechanical washers will not always clean and sterilize them thoroughly. They must be soaked, washed by hand with a brush, and then sent to the machine washer. Consumers can help a great deal in making it easier to maintain a safe milk supply. All that is needed is a little care at the right time, says the department.

PLAN FOR SUMMER SPRAYING

More Care and Attention Necessary Than Work in Winter—Combinations Save Time.

Summer spraying requires more care and attention than winter or dormant spraying because summer sprays must be applied after the buds or leaves are started and hence when there is danger of injuring the foliage. The common spray for the control of chewing insects is arsenate of lead, but arsenate of calcium is gaining in favor. Paris green is still used to some extent on Irish potatoes and tobacco. Nicotine sulphate, or tobacco parts sometimes called blackleaf, is effective against plant lice. Bordeaux mixture is an effective spray when reduced to summer strength for apples, pears, grapes and other fruits.

But there are combinations for various fungus diseases and insect pests that save time and trouble and are highly recommended by practical or chardists and gardeners.

SOY BEANS AND SUDAN GRASS

Combination Makes Good Feed and May Be Handled Like Timothy—Work Land Well.

Soy beans and sudan grass seeded together at corn planting time and cut for hay when the beans are in the dough stage make good feed, and may be handled same as timothy. Moist black land is suitable for this use and some of the alkali peat soils may be used to advantage for this crop mixture. Work the land down well and sow broadcast about 12 pounds of sudan grass to the acre, then drill in three pecks an acre of beans. The drilling will cover the grass seed. Mammoth Yellow or Hollyrock Mung are good soy.

Who Wants This Chance? I have a 114-acre farm near Sunnyside, 10 acres of meadow, sand land, 2 frame houses, big barn, tobacco shed and cellar. Price \$118,000 per acre. Act quick if you can use it. Call, phone or write Jno. E. Schroll, Reator, Mt. Joy, Pa.

WILL ANSWER ANY WOMAN WHO WRITES

Woman Restored to Health by Lydia E. Pinkham's Vegetable Compound Make This Offer

Cumberland, Md.—"My mother sent me Lydia E. Pinkham's Vegetable Compound when I was between thirteen and fourteen years old and was going to school, because I suffered with pains and could not rest. I did not have any more trouble after this until I was married, then I always was troubled in my back while carrying a child and could not do my work until I took the Vegetable Compound. I am strong, do all my washing and ironing and work for seven children and feel fine. I always have an easy time at childbirth and what it did for me it will do for other women. I am willing to answer any woman if she will write asking what it did for me."—Mrs. JOHN HEIER, 53 Dilleys St., Cumberland, Md.
During girlhood and later during motherhood Lydia E. Pinkham's Vegetable Compound brought relief to Mrs. Heier. Her case is but one of many we constantly publish recommending our Vegetable Compound. She is willing to answer your letter. Write to her.
