STUDEBAKER

(Plants 3, 4, and 5, Detroit, where the Big-Six, the Special-Six and Service Parts are made, are not shown in this illustration)

Vast Resources Make Possible High Value at Low Price in Studebaker Light-Six

Studebaker's vast resources are utilized to manufacture (not assemble) the Light-Six complete in the newest and most modern large automobile plants

The Corporation's resources, consisting of \$85,000,000 of actual net assets, including \$45,000,000 of plants, make it possible for Studebaker to offer a six-cylinder car, at less than \$1,000, that is emphatically superior in design, construction, performance, comfort and dependability, to any car within hundreds of dollars of its price.

By complete manufacture, Studebaker not only guards the quality of each part, but saves the middlemen's profits, with the result that no other make of car ever built, by anyone, at any price, represents so great a dollar-for-dollar value as the Light-Six.

Evidence of its mechanical superiority is found in its practical freedom from vibration. This is accomplished by the perfect balance of the motor. Perfect balance is obtained largely through the complete machining of all surfaces of the crankshaft and connecting rods. This requires 61 precision oper-

This method is followed exclusively by Studebaker on cars at this price. In fact, very few other cars have this feature, and their prices are from three to ten times as great as that of the Light-Six.

It is significant, therefore, that the sale of more than 80,000 Studebaker cars during the first six months of this year broke all records.

Buyers are justified in expecting more for their money in a Studebaker than in any other car.

Terms to Meet Your Convenience

The Studebaker Light-Six

was designed by Studeufactured complete in the NEW STUDEBAKER PLANTS AT SOUTH BEND, IND., which are notable in design, size and equipment for efficient and conomical manufacture.

The South Bend Plants contain 4,875,000 square feet of floor space. They employ 12,000

They cost \$33,250,000. The South Bend Forge Plant cost \$4,000,000, which alone is more than the total assets of many automobile companies.

And then there are: The machine shops which cost \$7,000,0 The stamping plant which cost \$4,000,000. The new foundries which will cost over \$2,000,000.

The power plants which cost \$2,500,000. The assembly and stock plants which cost \$5,000,-000, as well as closed and open body plants, spring

shops, etc. Studebaker plants, in cost and size, are the second largest of the world's automobile plants.

Studebaker is the second strongest financially of the automobile manufacturers of the world.

These facts show why it is possible for Studebaker to produce the Light-Six

—a truly remarkable car

—and sell it for less than a and dollars.

În actualcar value per dollar of price the Light-Six is in a class by itself. No prospective buyer of an automobile should decide on anything until he has seen and driven this car. It is backed by a corporation with \$85,000,000 of actual net assets and a 71-year reputation for lonest product and fair dealing.
