Mrs. S. Wachstetter entertained guests on Sunday: Mr. and Mrs. William Roath of Maytown, Mr. and Mrs. John Stetter of Salunga, and Mr. and Mrs. Charles Bamford and daughter of Mount Joy.

**PRINCIPLES OF HIGHWAY SAFETY**

The Bureau of Public Roads of the United States Department of Agriculture believes that considerable improvement in highway safety is of the utmost importance in view of the increase in highway traffic and the number of accidents. A careful study of the principles of safe roads is one of all known dangers as such elimination is possible within physical and economic means. The Bureau of Public Roads is warning of uneliminated dangers of easily recognized and other devices of standard design, uniformly placed with reference to the danger. The development of safe vehicles and the use of running parts and safety devices. The Bureau of Public Roads is warning of uneliminated dangers of easily recognized and other devices of standard design, uniformly placed with reference to the danger. The development of safe vehicles and the use of running parts and safety devices.

**AUTUMN THE TIME TO LAY POISON FOR PEACH BORERS**

Throughout much of the peach-growing district east of the Rocky Mountains from Canada to Florida, orchardists are troubled with the damaging work of the peach borer, the most important and serious pests of these trees and one that must be combated relentlessly if the peach is to be grown. Its injuries each year, including the cost of control measures, amount probably to not less than \$6,000,000, says the United States Department of Agriculture. This pest has been known for more than 150 years, is a native American insect, and has demanded the attention of horticultural men continuously. Many methods have been tried for its eradication and control, but not until 1915, when the Bureau of Entomology began experiments in the use of various toxic gases as a possible means of control, was any very practical method found.

In these experiments it was found that the chemical para-dichlorobenzene, for which the abbreviated name "paradichlor" is suggested when referred to as an insecticide, could be used successfully in control of the insect. This chemical is a white crystalline substance having an etherlike odor which, while harmless to persons and domestic animals under ordinary conditions, is poisonous to insects.

Application of this chemical to peach trees for the control of the peach borer should be made in the fall after most of the moths have finished their egg-laying activities, to avoid late infestation of the trees. The time suggested varies from September 1 as far north as Michigan, to October 10 in Georgia and Texas. The method consists simply of applying the chemical to the soil around the base of the tree in a circular band an inch or two wide, care being taken that the inner part of the band is about two inches from the tree trunk. As soon as the chemical has been applied, cover it carefully with several shovelfuls of dirt, making a cone-shaped mound around the tree trunk by packing the earth with the back of the shovel.

Under average fall weather conditions most of the chemical under the soil covering will have evaporated in four to six weeks, killing from 90 to 100 per cent of the borers. It is a good practice to remove the mounds of dirt some five or six weeks after application of the chemical.

The "paradichlor", in the experience of the Bureau of Entomology, can be used without danger of injury on trees 4 years of age and over—the dose on 4 and 5 year trees being three-fourths of an ounce per tree, on trees 6 years of age and older 1 ounce per tree, or, if the trees are unusually large 1 1/4 ounces may be used.

**DISINFECT THOROUGHLY IN HOG CHOLERA CONTROL**

Disinfection for hog cholera as it is usually carried out in misleading and often worthless, according to disease experts in the Bureau of Animal Industry, Pennsylvania Department of Agriculture. This work of disinfecting a barn or a hog lot is done for the purpose of destroying disease-producing germs and to be effective all of these germs must be destroyed. In hog cholera, for example, all parts of the carcass of an infected hog carry the disease and the hog throws off the germs continually.

The germ of hog cholera can live in sheltered places outside of the body for days or weeks, and in some cases for months and even years. Since these organisms are so small and can be carried in the dust of the air, they may lodge in the smallest and most remote places about the pens where they can not be reached easily. Hence, it is very evident that the so-called disinfecting measures, which ordinarily consist of spreading about the premises a little strong-smelling substance, cannot be depended upon to destroy the infection. As commonly used, it is not likely that half of the space actually occupied by germs is reached with the disinfectant.

Thorough and thorough cleaning of the premises, however, along with anti-hog cholera vaccines, do much to eradicate the disease in Pennsylvania. All pens and lots should be disinfected with a disinfectant where possible. A 90 per cent solution of formalin given it. It can be used in a variety of ways.

**FARM WOMEN'S SOCIETY MET AT DONEGAL SPRINGS**

The Farm Women's Society No. 8 met at the home of Mrs. George Endsow, Saturday the 20th. In the absence of the chairlady, Mrs. John Smith; the vice chairlady, Mrs. David Witmer, presided. Two new members were added to the society. The program consisted of music, recitation by Ellen Garber and several discussions. Mrs. John Mummau gave an instructive talk on "How to Vote." Mrs. Henry Garber told about their delightful trip through New York State to Watkins Glen. Miss Anna Keller gave some helpful echoes of Mrs. Rohrer's demonstration at Mount Getna. Mrs. Sweitzer named her favorite hymn, which was, "My Faith Looks Up to Thee" and gave the history of its author. Refreshments were then served and all enjoyed the social hour.

The next meeting will be held at the home of Mrs. John Fridy, October 18th, at which time Miss Forbes will give a demonstration. Everyone interested is invited to come.

**An Expert Gunner**

"I understand Colonel Jones is a fatalist." "You're right, stranger! He never falls to git his man!"—New Orleans Item.
