LETZ-DIXIE
MIXED MEAL MAKER

Reduces the cost of feed 25 to 50%
Increases production 15 to 30%

Stop that monthly feed bill. The Letz Dixie will cut, grind and mix anything grown—makes a perfectly balanced ration from home-grown crops.

CAPACITY No. 24 Dixie with FORDSON TRACTOR

Corn fodder with corn	2500 to 5000 lbs. PER HOUR
Ear corn with shuck	3000 to 8000 " "
Alfalfa or clover hay	2000 to 5000 " "
Soy bean with vines	2500 to 5000 " "

Green, wet, or oily material will not clog the LETZ-DIXIE. Built in three sizes for 4 to 25 h. p. engines. Has two to three times the capacity per h. p. of any roughage mill made. Write or call immediately for further particulars, prices and samples.

Crib Corn Carefully
When cribbing ear corn this fall it is a good plan to sort out the soft ears for immediate feeding. Ventilation by means of tile placed diagonally across the crib will also help to keep the cribbed corn from spoiling.

Get Some Soil Now
Before the ground freezes, take to some protected place the soil to be used for plant growing flats next spring. Clean up all refuse in the garden and plow this fall if practicable.

Mulch Shrubs Later
Do not make the mistake of mulching shrubs and perennial borders too early. It is better to allow frost to get into the ground and then mulch during December.

Order Chicks Early
The poultryman who desires chicks for next spring delivery should be looking around for a poultry breeder who sells chicks of good quality. Many a man is forced to go without chicks or to accept later hatched chicks than desired because he has been too slow in placing his order. Place your order early and you will receive what you want.

Feed Hogs Tankage
Tankage is not a substitute for corn but should be used to supplement it in hog feeding. It replaces a large part of the corn and insures satisfactory and economical gains which the farmer with a short crop of corn cannot afford to neglect. At the present price of grain, tankage is probably the cheapest feed considering results obtained.

Spraying Pays
Checking up on sprayed and unsprayed potatoes shows the former yielded more and are not affected with late blight rot. These are two points to remember in growing the 1925 potato crops.

BY BUREAU OF ENTOMOLOGY HONEY INDUSTRY AIDED

Beekeeping is an industry under development in this country as public appreciation of honey as a food continues to grow and create a demand. Honey is a sweet as old as the race and always held in esteem. Its flavor and aroma vary with the predominating kind of flower which the bees visit. Besides its use for table purposes honey is much used in cooking to replace all or part of the sugar, and it serves a purpose like that of sugar in the diet—it is a source of energy in readily available form.

The research of the bee-culture laboratory of the Bureau of Entomology of the United States Department of Agriculture is intended to throw light on the problems which arise in the beekeeping industry, such as the diseases affecting bees and the factors affecting the flow, flavor, or color of honey. Practically all of the extension teaching in this field has been turned over to the several States, which have continued it almost without exception. The correspondence of the laboratory is heavy. While the beekeepers of the country are at the present time contending with low honey prices in the general market they are as a rule still caring for their bees as well as ever and are sending as many inquiries to the United States Department of Agriculture as formerly.

Several other divisions of the department cooperate with the bee-culture laboratory in work which concerns the bee-keeper. These include the carbohydrate and micro-chemical laboratories of the Bureau of Chemistry, three offices of the Bureau of Agriculture Economics, and the Office of Cooperative Extension Work. From time to time various other offices and bureaus contribute information.

"Dressing and Curing Meat"
This is the title of a seven lesson free home study course offered by the correspondence department of the Pennsylvania State College agricultural school. The information it contains should come in handy during the fall and winter. A postal will bring you a home study catalogue from the college.

The advertising columns of the Bulletin are the mouthpieces thru which all wide-awake merchants speak to their customers.

NEWSPAPERS RANK HIGH AS ADVERTISING MEDIUM

A survey of 400 families in Philadelphia recently made by the United States Department of Agriculture in cooperation with the Pennsylvania Department of Agriculture revealed the fact that it is in newspapers most people see advertisements of fresh milk. The question "Where have you seen fresh milk advertised?" was asked of these 400 families and answers showed that 46 per cent remembered seeing some form of advertising. "Newspapers" was the most frequent answer while "dealers' wagons" was second. Besides featuring names and trademarks, some dealers had slogans on their wagons and trucks that emphasized different qualities found in their milk. Billboards ranked third, street cars fourth, and movies fifth. The Italian and poor classes of people had seen the least of this advertising while the well-to-do and wealthy classes had seen the most. Another question asked was "What do you remember about the advertising you have seen?" Two-thirds of those who had seen fresh milk advertised remembered some particular feature of the advertising. Food value was found to be the feature most often remembered, quality was named second, and the dealer's name, third. Cleanliness ranked fourth; freshness fifth; good for children sixth; health seventh; and price was mentioned only twice.

An attempt was made to find out what particular features of milk influenced the consumer most in the use of this food. Accordingly the consumer was asked what special feature should be advertised. About seventy per cent of those interviewed offered some suggestion on this problem. Food value ranked first as the best argument in favor of using milk. Quality ranked second, cleanliness third, and health fourth.

EIGHT MILLION CATTLE SUPERVISED FOR T. B.

More than 8,000,000 cattle throughout the country are now under supervision for the eradication of tuberculosis.

State and Federal veterinarians are carrying this work forward at the rate of nearly a half-million cattle tested each month. A recent summary prepared by the United States Department of Agriculture on the work up to the end of September reports that 449,484 cattle were tuberculosis tested that month. Of this number 16,732—about the usual proportion—were found to be tuberculous. Animals found to be diseased are immediately segregated for slaughter in accordance with regulations governing the disposal of such animals which are sources of infection.

States most active in the current work are shown by the report to be: Iowa, where during September 64,079 cattle were tested; New York, with 54,238; Wisconsin, with 45,954; and Illinois, with 43,438 cattle tested.

The large number of cattle owners who have placed their animals on the waiting list shows that the work is popularly supported. At the end of September this list included 2,681,543 cattle. The limited official forces engaged in this work are making strenuous efforts to comply with the increasing demand for tuberculin testing.

COLO. BOY PROVES WORTH AS FOREST FIRE FIGHTER

Charlie Williams, a 12-year-old lad of Salida, Colo., has again distinguished himself in fighting forest fires. In the summer of 1923 Charlie discovered a fire caused by a passing train on the Cochetopa National Forest. His prompt work in notifying the Forest Service officers and his personal aid on the fire line brought forth a strong commendation from the late Henry C. Wallace, Secretary of Agriculture. Recently Charlie was instrumental in checking another fire that had started in a dense stand of pine trees. His work was again commended by department officials.

Gridiron News During Past Week

MT. JOY DEFEATS PARK HILL 7-0

Mount Joy conquered Park Hill of Lancaster here Saturday afternoon by a 7-0 score in a game hampered by the storm and the resulting condition of the field.

The lone touchdown came in the first quarter when George Germer carried the ball over the goal line and W. Mateer added the extra point with the placement kick.

The spectators were given a thrill in the final period when Carl Germer went in at fullback although attired in civilians' clothes. The lineups:
Mount Joy (7)
C. Schatz left end
J. Pennel left tackle
Klugh left guard
W. Mateer center
Tyson right guard
Zerpey right tackle
R. Schatz right end
Showalter quarterback
Neiss left halfback
Mumma right halfback
G. Germer fullback
Mount Joy 7 0 0 0—7
Park Hill 0 0 0 0—0
Touchdown—G. Germer. Point after touchdown, W. Mateer (place kick).

Substitutions—Zimmerman for J. Pennel, Gotschall for Tyson, Kipple for Gotschall, Bleyer for R. Schatz, A. Pennel for Showalter, L. Ellis for Mumma, G. Brown for L. Ellis, C. Germer for G. Germer, Plass for Kineley, Hecker for Welsh, E. Ashby for Fritsch, Simmers for F. Ashby.
Referee—G. Schneider; Umpire—F. Germer. Linesman—F. Schneider.

ELIZABETHTOWN TUMBLES MIDDLETOWN TEAM 6-0

Elizabethtown came through with a powerful offensive punch in the final quarter and won the annual Lancaster County classic from Middletown on Brown Athletic field, in this place, Sunday by a 6-0 score.

The first three periods were evenly fought with neither team being able to shove the ball over the goal line. In the final period, however, Elizabethtown took the offensive and started a march that ended in a score. Shirk took the ball over after a brilliant run of thirty yards. The score seemed to pep up the entire team for it immediately got another drive under way and was on the verge of a second touchdown when the game ended.

The lineups:
Elizabethtown (6)
J. Meckley left end
M. Seiders left tackle
Ziegler left guard
Schaeffer center
Miles right guard
Shank right tackle
E. Meckley right end
Shirk quarterback
Olweiler left halfback
Landis right halfback
Heilman fullback
E-Town 0 0 0 6-6
M-Town 0 0 0 0-0
Touchdown, Shirk.
Substitutes, C. Miller for M. Seiders, Hartzell for E. Meckley. Referee, W. Ellis; Umpire, G. Schneider; Linesman, L. Ellis.

TESTS APPETITE OF GROUND SQUIRRELS

Tests of the appetite of the average Rocky Mountain mantled ground squirrel and the San Francisco mountain chipmunk are being conducted by the Biological Survey, United States Department of Agriculture, at the Southwestern Forest Experiment Station. These little animals show an astonishing capacity for pine seeds, the ground squirrel eating 340 pine seeds in one day and night, while the chipmunk can account for 237. It is found that a group of four seed trees in an acre of cut-over western yellow-pine land will produce about 92,000 seeds in a good year, which would be just enough seed to carry one family of squirrels and three families of chipmunks about two weeks. What the rodents are going to do for the remaining 50 weeks or what they do in a year seed does not appear, but in any case at least they very severely nibble with the natural yellow pine.

MY DAUGHTER WOULD CRY AT EVERYTHING

Nervous and Irritable. By Taking Lydia E. Pinkham's Vegetable Compound Became Entirely Normal

Clinton, Wisconsin.—"My daughter was in a very run-down condition, and was irritable, and would cry at every little thing she was so weak and nervous. As Lydia E. Pinkham's Vegetable Compound had helped me when I was a girl I gave it to her to build her up, and the results were all that we could wish for. I wish that every mother with growing girls would try it for these troubles girls often have. I had taken it myself before my girl was born, and she was one of the nicest babies any one could wish to have. I recommend the Vegetable Compound to women and girls and cannot praise it too highly."—Mrs. L. A. HOLFORD, Box 48, Clinton, Wisconsin.
Mothers can depend upon Lydia E. Pinkham's Vegetable Compound to relieve their daughters of those troubles they so often have. They know from experience the value of the Vegetable Compound in the treatment of these complaints and many, like Mrs. Holford, give it to their daughters.

SATISFACTORY PERFORMANCE IS THE THING THAT COUNTS
