**ATWATER  
KENT  
RADIO**

IN RADIO, perhaps more than anywhere else, efficiency increases as complications are eliminated. That is why ATWATER KENT Radio is winning more and more friends each day. It is so beautifully simple.

With this simplicity come wonderful volume, tone quality, distance, selectivity and ease of operation—results that will give you a new conception of radio performance.

THINK OF  
WHAT IS  
BACK OF IT

Come in and see our stock of ATWATER KENT Receiving Sets and Loud Speakers. You will be immediately impressed by their beauty and fine workmanship—And for those already acquainted with the line, we have something new in ATWATER KENT Receiving Sets to show you.

**The Constitution  
In Our Daily Life**

ARTICLE WRITTEN EXPRESSLY FOR THE MOUNT JOY BULLETIN BY MR. H. FRANK ESHLEMAN

A bran new question was argued before the Supreme Court a few days ago. Grossman, a Chicago saloon keeper was found guilty of bootlegging and as part of his punishment his saloon was closed and the Court ordered that he should not engage in selling beverages for one year.

But he went right back into business and sold unlawful liquors again. So the Court brought him before it and held him in contempt and fined him \$1000 and sentenced him to a year in jail. Now in going right back into his palace after it was decreed he should not sell any beverage for a year, he violated the Volstead Act because he sold prohibited liquors, while in selling a beverage at all when ordered not to do so he defied the Court.

He was sent to jail and was serving his sentence, but finally got the matter before the president who pardoned him from serving the year; so he paid the \$1000 fine and was let out. The Court then hearing that he was out declared the president had no power to pardon a sentence given for contempt of Court, and had him put back into jail again. Then he got a writ of habeas corpus on the ground that he was illegally in jail and the matter was argued in the Supreme Court.

The Constitution provides that the president "shall have power to grant pardons for offenses against the United States." On his side it was argued that the Constitution gave the president power to pardon; but on the other side it was argued that the president cannot pardon from a sentence for contempt of Court, but only for offenses against the United States, as the Constitution says, while here he was pardoning for an offense against the Court, and that if the Courts did not have power to enforce their decrees without the power of the president interfering, the president could destroy the Courts, by destroying their decrees.

It was replied in favor of the president's pardon that the man going back into the business of selling liquors and selling illegal stuff, he was breaking the law and committing an offense against the United States as well as defying the judge of the Court; and in such a case the president had power. The point now put up to the Supreme Court to decide is, whether in the case of a criminal contempt, which is at the same time the committing of a crime as well as a contempt, a court can sentence for contempt or is the person entitled to a regular trial before Court and jury. The decision we shall learn later.

H. Frank Eshleman.

**WARN AGAINST DANGER OF FEEDING MOLDY CORN**

Warning against the danger of feeding moldy corn to livestock is given by the Pennsylvania Bureau of Animal Industry. One feeding of moldy corn may be sufficient to poison an entire stable of animals, according to the State officials. They say further that forage poisoning and intestinal disorders will likely occur following the feeding of moldy food. Although horses and mules seem most susceptible, all farm animals are subject to these diseases. Affected animals show symptoms of poisoning, will stagger about, and may finally die. In case such symptoms develop, state officials advise getting in touch with the local veterinarian as soon as possible.

**Cheese Factories**

A recent survey by the United States Department of Agriculture shows that 70 per cent of all cooperative cheese factories in the United States are in Wisconsin, that 60 per cent of farmers belonging to such enterprises are located in that State, and that 70 per cent of the business handled in 1923 by cooperative associations for marketing cheese was handled by Wisconsin organizations.

**BRUSH CLOTHES AND FURS WELL WHEN TAKING OUT OF STORAGE**

Clothes that are to be placed in cold storage should first be thoroughly brushed, sunned, and beaten to dislodge any possible moth eggs or larvae that may have found a resting place in them, and clothes that are taken out of storage in the fall should receive similar care in case any larvae have survived their enforced hibernation under refrigeration. The Bureau of Entomology has carried on investigations in the value of cold storage as a control for various stored product pests, to obtain data regarding the time and temperature combinations necessary for the destruction of insects. Data have been secured on the effect of various temperatures upon common pests of grain, cereal foods, flour, beans, peas, tobacco and fabric pests such as clothes moths and carpet beetles. Important variations have been found in the resistance of these pests to cold.

In the case of the common clothes moth, a temperature range of from 40 degrees to 45 degrees F. maintained for a storage period of over six weeks is generally sufficient to kill the eggs which may be on the fabrics or furs when stored. At 20 degrees to 25 degrees F. and at 25 degrees to 30 degrees F. clothes moths eggs are all killed in about three weeks. Increase in temperature up to 40 degrees F. increases the time for killing the eggs. The older, well-grown larvae, however, are very resistant. When subjected to an even temperature of 20 degrees to 25 degrees F. these well-grown larvae were killed in 67 days, but those held at temperatures ranging from 30 degrees to 40 degrees F. were still alive after over four months. When the temperature fluctuated from 24 degrees to 48 degrees F. but was mostly about 40 degrees F. well-grown larvae without refrigeration for from 6 to 14 months. Afterwards when placed in a sufficiently high temperature for feeding, these larvae became normal and resumed activity just as if their life had not been interrupted by a long period in cold storage.

It is not surprising, therefore, that living robust insects are occasionally found in articles several days after removal from a long period in cold storage. This discovery is in no way a reflection on the storage firm, which has done its part. If the patrons take the precautions suggested above, of brushing and sunning garments both before they go into storage and immediately after they are removed, this trouble will be largely eliminated.

**TRUMPETER SWANS NOW GIVEN PROTECTION IN U. S.**

Trumpeter swans and whooping cranes have been completely protected from the migratory birds which may be taken under Federal permits for scientific purposes. By action of the Acting Secretary of Agriculture on November 12, 1924, approving a recommendation of the Biological Survey, trumpeter swans were included with whooping cranes, which were similarly protected by the department in 1922. Neither of these two species may be taken in the United States for any purpose. Complete protection is also afforded both species in Canada.

Under the provisions of the treaty with Great Britain for the protection of migratory birds, certain birds, including swans, are given continuous protection through a closed season for a period of at least 10 years following the going into effect of the treaty. Provision was also made in the treaty whereby all protected species should be taken under proper permit for strictly scientific purposes.

So far as known there are but very few trumpeter swans in existence, and it was deemed advisable, in order to prevent the complete extermination of the species, to afford them absolute protection by removing them from the list of migratory birds that may be taken under scientific permits, as was previously done with the whooping cranes.

**Horses Need Exercise**

Horses need air and action. With the approach of cold weather they will keep healthier if they are exercised every day by driving or by being allowed to run in the yard or pasture.

**An Easy and Sure Way to Save Money**

Our  
**CHRISTMAS CLUB**

is now open for membership

**Make This An Automotive Xmas.**

Helpful suggestions for the Autoist Christmas. We have quite a display of novelties for the automobile and until Christmas we are reducing a good many articles to reach the buyer's purse

Below are a few:

- 30x3 1/2 U. S. Royal Cords ..... \$12.85
- 31x4 U. S. Royal Cords ..... \$17.95
- 32x4 U. S. Royal Cords ..... \$19.75
- 33x4 U. S. Royal Cords ..... \$20.25
- 34x4 U. S. Royal Cords ..... \$21.00
- 32x4 1/2 U. S. Royal Cords ..... \$24.95
- 33x4 1/2 U. S. Royal Cords ..... \$25.45
- 30x3 1/2 Royal Tubes, \$3.00 value ..... 2 for \$4.76
- 30x3 1/2 Grey Tubes, \$2.00 value ..... 2 for \$3.46
- All other sizes in Royal and Grey Tubes reduced.
- 30x3 1/2 Nomad Cords, oversize ..... \$ 9.90
- 32x4 Nomad Cords, oversize ..... \$15.70
- Parking Lights from ..... 95c to \$3.00
- Mirrors, \$2.00 value ..... \$1.25
- Others up to \$2.50.
- Klaxon Horns, list ..... \$4.95, \$10.00 and \$15.00
- 10% Reduction Until Christmas
- Batteries, a good suggestion for cold weather.
- Agents for Philco, Diamond Grid and Exide Batteries
- These make good presents for Winter motorists.
- \$10 Fyrac Spot Light for windshield \$3.75; installed \$10.00
- Be prepared for ice and snow. McKay Chains at moderate prices to fit all tires.
