Dairy Feed 25 pc.	\$56.00-57.00 ton
Horse Feed 85 pc.	\$55.50-56.50 ton

Potato Market Irregular.

Throughout the country there seems to be rather unsettled feeling in the potato industry. The movement from all the important states continued heavy, with Maine leading. A considerable porportion of the movement from both Maine and Minnesota is reported to be seed stock.

Prices at various shipping points on bulk or sacked stock show a range of 70 to 85c per hundredweight in Maine to \$1.00 to \$1.15 in New York state. Most middlewestern points are reported f. o. b. sales, 75-95c per cwt.

The Philadelphia market received about 175 carloads mostly from Pa., Maine and New York during the past week. The market has weakened slightly for most all stock, and while bulk stock has shown little material change, sacked stock prices range about 25c per sack lower than last week.

The New York and Chicago markets were both reported as firm but Pittsburgh was dull and showed a weaker tendency under liberal receipts.

MARKETING BUREAU TO HELP HOUSEWIVES

Marketing hints for housewives is the new feature being presented weekly by the Pennsylvania Bureau of Markets cooperating with the United States Bureau of Agricultural Economics, through Station WIP in Philadelphia. Talks are given every Tuesday afternoon from 4.20 to 4.30.

The object is to acquaint the housewife with market conditions that are of interest and importance to her. There are many times when the wholesale market is overstocked with certain commodities, and a knowledge of this helps her to buy economically and also aids in the general distribution of agricultural products.

As new or unusual commodities appear on the market, an effort will be made to introduce them by means of the radio. This is one of the first efforts to bring market information direct to the consumer. The talks will not contain prices on account of the great variation in stores and neighborhoods.

### BANANAS IN TRANSIT PROTECTED BY FORECASTS

Bananas are consumed in great quantities by the people of the United States, the annual imports amounting to approximately 45,000,000 bunches. The distribution of this fruit from the ports of entry to all parts of the country is a highly organized service. The product is very susceptible to weather damage, especially by cold, and protective measures must be employed. Shippers are made in ventilator cars which in some cases are accompanied by attendants or else they are looked after by messengers at designated points en route who adjust the ventilators according to weather conditions expected to occur before the next messenger station is reached. The manager of the southern division of a large fruit company with headquarters at New Orleans reported that serious losses occurred from sudden drops in temperature because the agent at the previous station did not have knowledge of the approaching cold and failed to properly adjust the ventilators. Appeal was made to the Weather Bureau of the United States Department of Agriculture for assistance, and arrangements for providing special services were made. The company furnished a chart showing the various shipping routes and the location and names of their agents. The entire area was divided into zones and the duty of rendering service in designated zones was assigned to the officials in charge of Weather Bureau offices best suited to render prompt and efficient service. Whenever a drop to or below freezing temperature is expected within the ensuing 24 to 36 hours a telegram is sent at the expense of the company to the fruit company messengers in the area to be affected. This service was inaugurated in the late fall of 1923 and the results during the past winter were highly beneficial.

### INCREASE IN RECEIVING SETS EXTENDS VALUE OF FORECASTS

The time may come when radio broadcasting will excel all other methods in the dissemination of weather information. The effectiveness of this means of reaching the farmer promptly with forecasts and warnings does not depend on having more broadcasting stations or on their power and range, but on the installation of receiving sets by those who need this information.

The most effective method of furnishing farmers with weather forecasts and warnings at the present is by means of rural telephone systems, but this bids fair to be exceeded in a short time by radiophone broadcasting. Developments in the latter since January, 1921, when the first regular radiophone broadcasts were begun from the plant operated by the University of Wisconsin at Madison, have been rapid. There are now about 120 broadcasting stations cooperating with the Weather Bureau and nearly all parts of the United States are within their range. The forecasts radiocast from each station are those appropriate to the section in which it is located; that is the forecast for its own State and in some instances those for several surrounding States in addition.

The splendid entertainment features provided by broadcasting stations perhaps is doing more to encourage increased installations than the utilitarian portions of the programs, but, whatever the inducement may be, thousands of receiving sets are being added monthly and in course of time farmers and business men in every remote section will be on equal terms with city residents in obtaining promptly and directly weather forecasts and warnings, which, if used advantageously, will add largely to national economics.

### MILK HANDLERS CAUTIONED TO BE CAREFUL IN WINTER

In cold weather the bacterial count of milk may be low, while sanitary conditions may not be what they should be, says the Bureau of Dairying, United States Department of Agriculture. The mere presence of winter, say the experts, should not lead milk-plant operators to relax care in keeping everything strictly sanitary. Although the colder atmosphere makes it easier to keep bacteria under control, a low count does not mean so much as it does in summer.

Men who handle milk are cautioned to take particular care, even when laboratory tests show satisfactory results, to see that milk does not leak through valves before it has been held long enough in the pasteurizer, as such leakage may thwart the purpose of pasteurization. Emphasis is laid on the work of bottle and can washing machines to see that sprays are not clogged, that worn and broken brushes are replaced, that all solutions are of proper strength, and that sufficient heat is being applied. The temperature of pasteurization is called the most important of all factors, and for this reason thermometers must always be kept in order.

Colorado has more than 500 lakes and more than 6,000 miles of streams in which there is trout fishing.

### Home Health Club

WEEKLY LETTER WRITTEN EXPRESSLY FOR THE BULLETIN BY DR. DAVID H. REEFER

WORMS of various kinds may make their homes in the human intestines and cause not only annoyance, but often disease, loss of flesh and strength, and bring about a general impairment of health by interfering with nutrition. Entrance is gained chiefly to the alimentary canal as eggs in the food and drink, and take up their abode in certain localities according to their nature. There are between thirty and forty different kinds of worms that thrive in the human intestines, although they may all be classed under a few headings, and we will devote our time to the round worms.

These very much resemble in size the regular angle worm, though they are possessed of more firmness and are from three to four inches in length. It is not very often that much more than two such worms are found in the human being, although they may be very numerous and even amount to an obstruction in the intestines. A female intestinal worm is capable of discharging 60,000 eggs, and these eggs retain their vitality under most adverse circumstances. They are discharged with faeces from the bowels and find their way into streams and shallow wells, and are, with the drinking water, introduced into the human body to be hatched. Thus it often happens that a great many persons depending upon a surface water supply are afflicted with worms, while those drinking water from deep wells, or filtered water, are not so apt to be annoyed. While the worms usually remain in the intestines, they sometimes wander to other portions of the body, such as the stomach, etc.

The presence of round worms in the intestines may not be accompanied by any pronounced symptoms and may not be even suspected until noticed in the stools or vomit. Still it is usual that one or more of the following signs will be noticed: nervous irritability, gritting of the teeth at night, and a "nightmare", foul breath, dry hacking cough, dark rings under the eyes, a red spot on one cheek, pinched and itching nose, headache, dizziness, sickness of the stomach, and diarrhea. Children may be indisposed and possibly have colic pains and convulsions.

My favorite prescription for worms is Calc. Phos. 6x tablets, one of the tissue foods or cell salts. The reason I like it better than any other is, first, it is inexpensive; second, it is absolutely safe, cannot harm even an infant; third, it is not a patent medicine, and fourth, it is more effective and safer than anything else that I have ever seen used.

### MILLIONS OF CATTLE WAIT FOR TUBERCULIN TEST

With 9,000,000 cattle already under supervision for the eradication of tuberculosis, veterinary officials of the United States Department of Agriculture and the various States are making efforts to meet the continued demands for additional testing. A summary of the status of the work up to December 1 shows a waiting list of 226,534 herds containing more than 2,500,000 cattle. This list represents applications for testing in 34 States, the others having been able to handle the testing as fast as requested.

The States which had "clear states" in this respect at the time the summary was prepared were: Arkansas, Delaware, Georgia, Kentucky, Louisiana, Missouri, Montana, Nevada, New Jersey, Oregon, Utah, Virginia, Washington, Wyoming and the District of Columbia.

### ARE YOU ALL RUN DOWN?

Many Mount Joy Folks Have Felt That Way

Feel all out of sorts?  
Tired, achy, blue, irritable?  
Back lame and stiff?  
It may be the story of weak kidneys!

Of toxic poisons circulating about. Upsetting blood and nerves. There's a way to feel right again. Help your weakened kidneys with Don's Pills—a stimulant diuretic. Don's Pills are recommended by many Mount Joy people.

Mrs. Geo. Myers, 148 New Haven St., Mount Joy, says: "My back was weak and housework was burdensome, on account of the sharp grinding pains that went through my back. I felt worn out before I did any work and then, too, my kidneys acted irregularly. I bought Don's Pills at Chandler and Co.'s Drug Store and after using two boxes I was rid of the backache. I no longer felt tired and my kidneys were restored to normal."

Price 60c, at all dealers. Don't simply ask for a kidney remedy—get Don's Pills—the same that Mrs. Myers had. Foster-Milburn Co., Mfrs., Buffalo, N. Y.

### Organized 1885 Knights of the Golden Eagle

**HERMIT CASTLE NO. 66 KNIGHTS OF THE GOLDEN EAGLE**  
MOUNT JOY, PA.

Hermit Castle No. 66, Knights of the Golden Eagle, Mount Joy, was instituted in 1885. It is now entering its fortieth year. It has paid thousands of dollars in sick and funeral benefits. It has met every claim in full since its organization. It has \$100,000 general benefits in the event of a member's death, and \$50 in the event of a member's wife's death. A weekly sick benefit of \$4.00 per week is also paid to sick members. Its dues are 10 cents a week. It has thirty members in good standing, and \$5,500 in cash and invested securities. W. P. Grandner, P. G. O. special organizer, will be here two weeks in February to solicit new members for this castle. Thirty-five local men have already signified their intention of joining the castle and more are expected to be at the initial initiation. Dr. W. R. Heilig, R. Fellenbaum, M. C. Bowman, C. D. Carson and M. M. Leib are on the re-organization committee.

If you are between the ages of 18 and 40, you can join  
**Hermit Castle**  
During February for \$5.00.
