Leader, Mrs. Harry Seaman.
Preaching 7:30 P. M.
Theme: "God's Clock."
A Congregational meeting will be called Wednesday evening, December 1st, in the interest of Sunday School work. Every member is urged to be present.

Marketing Hints to Housewives

As you probably know, this is National Apple Week. Every year a week in the Fall is set aside for informing the public about the many uses for apples. It is to acquaint the public with the value of apples, not only as an economical fruit but also something about the beneficial effects in the diet.

Doctors tell us that apples are high in vitamins. The apple is also a good means of reducing surplus weight. "An overweight person may eat all the apples he wants, provided he will eat nothing but apples and can easily reduce his surplus flesh at the rate of one or two pounds a day," said a prominent physician. "Of all the people in the United States could be induced to eat six apples a day, a good many doctors would have to abandon their profession or else take up Horticulture as a sideline. However, we do not expect that everybody will eat six apples a day but there is an old saying that 'an apple a day will keep the doctor away' and there is more truth than fiction in this statement.

Although we are not particularly interested in the exact number of bushels produced, it is noteworthy that this year there is a large crop and according to the Pennsylvania and Federal Bureau of Markets, there is over a bushel of apples for every man, woman and child in the United States. Are you eating your quota?

One of the features of the National Apple Week is to familiarize the housewife with the varieties and what particular varieties are best for eating and cooking. Do you select your apples just by their outward appearance? If so, you are apt to be woefully misled because some pretty red apples are not good eating. At the present time here on the Philadelphia market, there are a number of varieties to select from and I will tell you about some of the leading ones and how to distinguish them because more and more retailers and storekeepers are selling apples by the variety. The housewife doesn't merely say, "I want some eating apples or cooking" but instead "I want some Delicious apples" or "Give me a peck of Grimes Golden."

Here are some of the varieties of apples that you will find on the fruit stands, in the stores, or on the wholesale fruit and vegetable market. As an eating apple, the Delicious ranks at the top. It is a large red apple and is easily recognized by the five points or knobs on the blossom end. Another high quality apple is the Stayman Wine-sap. This is a large red variety and differs from the Delicious by being round and smooth at the blossom end instead of having the five knobs. The Stayman usually has a dull red color while the Delicious is bright red. The Stayman is an all around apple because it is excellent for cooking and eating. It is one of the best apples for baking purposes. The Ben Davis and Gano are very similar varieties and both are good for cooking. They are bright red apples and somewhat elongated in shape. The York Imperial is usually red but may have only a reddish tinge with a yellowish or greenish background. This apple is flat shaped and more or less lop-sided. The York Imperial is best for cooking purposes. The famous Grimes Golden apple needs little discussion as most people are familiar with this variety. It is yellow in color and is somewhat square shaped. The Grimes Golden is plentiful and the housewife will not be disappointed if she buys this variety for cooking or eating. You will find all these apples on the market at the present time and now is an opportune time to lay in a supply because prices are reasonable.

In Lake Magadi, Kenya Colony, Africa, there is a stretch of water fifteen miles long by four miles broad, which appears to be frozen even at the height of summer. Carbonate of soda crystals cover the lake's surface and are so thick in spots that they will bear a man's weight.

Diogenes, famed for centuries as the searcher after truth, has come down to our generation under the shadow of a lie, modern researchers declare. He never lived in a tub at all. The allusion was made by a biographer, who remarked that a man so crabbed 'ought to live in a tub like a dog.'

So large a crowd of the curious gathered when a butterfly put in an appearance at 42nd Street and Lexington Avenue, New York, that police reserves had to be called to control the situation.

A cable ship has discovered that the bed of the Atlantic Ocean near St. Helena has risen two miles in the past twenty-five years.

Milk Standards Are Set Right

Promulgated for Guidance of Officials in Enforcing Pure Food Act.

(Prepared by the United States Department of Agriculture.)

The secretary of agriculture has promulgated, for the guidance of officials in the enforcement of the federal food and drugs act, revised and amended definitions and standards for milk and its products adopted by the food standard committee. This committee is composed of three representatives each of the Association of American Dairy, Food and Drug Officials, of the Association of Official Agricultural Chemists, and of the United States Department of Agriculture.

The revised standards and definitions include milk, pasteurized milk, homogenized milk, skimmed milk, buttermilk, goat's milk, evaporated milk, sweetened condensed milk, evaporated skimmed milk, dried milk and dried skimmed milk. The text of the standards and definitions recommended by the committee is as follows:

Text of Standards.

1. **Milk**.—Milk is the whole, fresh, clean, lacteal secretion obtained by the complete milking of one or more healthy cows, properly fed and kept, excluding that obtained within fifteen days before and five days after calving, or such longer period as may be necessary to render the milk practically colostrum free.

2. **Pasteurized Milk**.—Pasteurized milk is milk that has been subjected to a temperature not lower than 145 degrees Fahrenheit for not less than thirty minutes, after which it is promptly cooled to 50 degrees Fahrenheit, or lower.

3. **Homogenized Milk**.—Homogenized milk is milk that has been mechanically treated in such a manner as to alter its physical properties with particular reference to the condition and appearance of the fat globules.

4. **Skimmed Milk**.—Skimmed milk is milk from which substantially all of the milk fat has been removed.

5. **Buttermilk**.—Buttermilk is the product that remains when fat is removed from milk or cream, sweet or sour, in the process of churning. It contains not less than eight and eight-tenths per cent (8.8%) of milk solids not fat.

6. **Goat's Milk, Ewe's Milk, Etc.**.—Goat's milk, ewe's milk, etc., are the fresh, clean lacteal secretions, free from colostrum, obtained by the complete milking of healthy animals other than cows, properly fed and kept, and conform in name to the species of animal from which they are obtained.

7. **Evaporated Milk**.—Evaporated milk is the product resulting from the evaporating of a considerable portion of the water from milk, or from milk with adjustment, if necessary, of the ratio of fat to nonfat solids by the addition or by the abstraction of cream. It contains not less than seven and eight-tenths per cent (7.8%) of milk fat, nor less than twenty-five and five-tenths per cent (25.5%) of total solids; provided, however, that the sum of the percentages of milk fat and total milk solids be not less than thirty-three and seven-tenths (33.7%).

Condensed Milk.

8. **Sweetened Condensed Milk**.—Sweetened condensed milk is the product resulting from the evaporation of a considerable portion of the water from the whole, fresh, clean, lacteal secretion obtained by the complete milking of one or more healthy cows, properly fed and kept, excluding that obtained within fifteen days before and ten days after calving, to which sugar (sucrose) has been added. It contains not less than twenty-eight per cent (28%) of total milk solids, and not less than eight per cent (8%) of milk fat.

9. **Evaporated Skimmed Milk**.—Evaporated skimmed milk is the product resulting from the evaporation of a considerable portion of the water from skimmed milk, and contains not less than twenty per cent (20%) of milk solids.

10. **Sweetened Condensed Skimmed Milk**.—Sweetened condensed skimmed milk is the product resulting from the evaporation of a considerable portion of the water from skimmed milk to which sugar (sucrose) has been added. It contains not less than twenty-four per cent (24%) of milk solids.

11. **Dried Milk**.—Dried milk is the product resulting from the removal of water from milk, and contains not less than twenty-six per cent (26%) of milk fat, and not more than five per cent (5%) of moisture.

12. **Dried Skimmed Milk**.—Dried skim milk is the product resulting from the removal of water from skimmed milk, and contains not more than five per cent (5%) of moisture.

Fourteen per cent of the students in women's colleges work their way through school, a survey indicates.
