BURY LUNCH FOR PREHISTORIC DOG

Indians' Custom Revealed in Finding of Bones.

Washington.—Discovery of two deer bones painted red is a bit of evidence that Indians who lived in America 2,500 years ago placed food in the graves of pet dogs so that they would have bones for their journey in the next world.

The dogs appear to have been buried with ceremony by the Indians, said Doctor Roberts in discussing his expedition. Whether the dry bones were painted red to fool the dog spirits into thinking there was good meat on the bones can only be conjectured.

The dogs belonged to Indians of the last days of the basketmaker civilization that flourished in the Southwest many centuries before the Pueblos, he said. Very ancient tribes are known as the basketmakers because they wove all their vessels and containers.

In the course of centuries pottery-making was learned. Definite evidence of the Indians who lived at the time when the change from baskets to pottery was made was discovered by Doctor Roberts. Fifteen skeletons were found in two layers of earth. The burials in the lower level had no baskets or containers for food, such as have been found in similar burials.

The baskets here had evidently fallen apart and disintegrated from exposure before time covered them with earth. But in the layer of earth above them were bodies accompanied by crude clay jars and bowls.

These skeletons of the transition period are of great interest to ethnologists who are studying the types of Indians who inhabited America in the days before the time of Christ.

Complete pieces of four bowls which could be patched together, even after so many centuries, were found by Doctor Roberts, as well as quantities of fragments of the rough, coarse clay containers made by the first artisans of the region who tried the potter's trade.

High Shoes for London Girls Are Coming Back

London.—High shoes reaching half way up the calf and reminiscent of styles ten years ago will be in vogue this year with English girls, judging from the exhibitions at the shoe and leather fair which was held here.

The models shown were plain in style and had none of the swashbuckling flare of the Russian boots. It is predicted that black and brown shades will be worn by the business girls, while the ultra-fashionable women will prefer scarlet boots and three-inch heels or opalescent kid boots radiant with every color of the rainbow.

It was evident at the exhibit that lizard skin will continue to be a popular trimming for shoes this winter.

First Whites in Hawaii

Early Hawaii legends indicate that the first white men visited Hawaii 400 years ago. Many historians and scientists maintain that no white men were there before Capt. James Cook arrived in 1778, but the Hawaiian legends tell of the wrecking of a strange vessel and landing of several white men in 1577. It is pointed out that no white people except the Spaniards were cruising in the Pacific at that early period, and some historians think it entirely possible that the strange vessel was one of three sent by Cortez from Mexico in an attempt to reach California.

Earliest Public Libraries

It is impossible to determine which was the first library in the United States supported by public funds and wholly free to its users. The earliest recorded gift of books to a municipality is that of Rev. John Sharp, who in 1709 bequeathed his library to the city of New York for the benefit of the people. The town library of Petersburg, N. H., formed through the efforts of Rev. Abel Abbot in 1852, appears to have been the first free library which has continued to the present day.

Large Mouth, Small Throat

The throat of the giant sperm whale is said to be large enough for the passage of an object about the size of a man's waist. The food consists largely of cuttlefish, but fishes not larger than the bonito and the albacore are found in its stomach. The sperm whale is the only large whale which feeds upon fish. The blue whale, the largest animal alive today, reaching a length in excess of 80 feet, with a mouth so large that ten to twelve men could stand therein, has a throat about 8 inches in diameter.

Want a Nice Business

owner, I now have the fine brick property, confectionery and cigar and tobacco store of the late Harry E. Klugh, on East Main St., Mount Joy for sale. House has all conveniences and will give possession any time. Call, phone or write J. E. Schroll, Mt. Joy, Pa. sept14-tf

Health Talk

WRITTEN BY DR. THEODORE B. APPEL, SECRETARY OF HEALTH

"A large limousine recently drove up to a roadside water pump which carried the sign, 'Dangerous. Do not drink this water.' The sign was noticed, read, laughingly remarked upon—and disregarded!" said Dr. Theodore B. Appel, Secretary of Health, today.

"It is indeed difficult to believe such a story, but it is true. Whatever were the motives back of such an attitude the fact remains that foolhardiness and foolishness were thus deplorably displayed. While such a case is most unusual it nevertheless emphasizes the duty every traveling motorist owes to himself to protect his health.

"It is of little avail to an individual that city health departments purify water and otherwise safeguard health, if while traveling he becomes entirely careless as to the kind of water he drinks, contracts typhoid fever in consequence, becomes seriously sick and dies.

"In Pennsylvania every effort has been taken to safeguard the automobile tourists both in the camps and on the road. All private water supplies on the main highways and many of the secondary ones have been examined and placarded either safe or dangerous. It will pay absolutely to believe in these signs, even if all the others on the highway are discounted; they tell a story of scientific investigation and microscopic examination which in every particular may be relied upon.

"It will perhaps demand some will power to drive by an unmarked supply on a side road if one is thirsty. But it is a safe thing to do. The exercise of a little patience is better than weeks in bed with an illness.

"Some jurisdictions do not examine private water supplies. And in this situation the only safe thing is to carry along water the purity of which has been established, or place a drop of tincture of iodoine in every pint of the supply used.

"The May meeting of the Lancaster Automobile Club will be held this Friday evening at Quarryville. A large attendance is expected.

GOOD HINTS TO FARMERS FOR LIMING THE SOILS

Ground limestone may be applied to fields at any time. It does not injure seeds that come in contact with it. Neither does it tend to set free the ammonia in manure that comes in contact with it, so that it is often possible to scatter a suitable amount of ground limestone on a load of manure in the spreader and apply it this way. It should not be mixed with or applied at the same time as superphosphate, since this tends to bring about a change of water-soluble phosphorus compound to an insoluble form. Oxide of lime, either in the form of burned or slaked lime requires somewhat more care in application.

It should not, especially if it is unslaked, be applied so that it comes in contact with seeds or young plants. Like the ground limestone, it should not be mixed with superphosphate. Neither should it be mixed with stable manure, as this brings about loss of ammonia. Lime may be applied by drilling with a seed drill or by spreading with a manure spreader. Drilling is not a satisfactory method if the lime is not in a proper condition to be uniformly distributed. A manure spreader serves satisfactorily when a thin layer of manure is placed in the bottom and the size of the load regulated according to the quantity to be spread. The practice of placing burned lime in piles on the field and slaking it by the addition of water or allowing it to slake in the air and then spreading by hand is a somewhat common use. This is a disagreeable operation, and uniform distribution is difficult.

SCHOOL ATTENDANCE ESTABLISHES RECORD

Pennsylvania, this year, has had the highest record in school attendance in the history of the State, according to a report just compiled by the Department of Public Instruction.

The percentage for the current school year ranges from 95 in September to 93 for last month. The average attendance for the year, including May figures, 93 per cent., registered a high water mark.

Arthur Brisbane is right: the Germans could attack us by air—if we helped 'em in from Labrador.

S. EDWARD GABLE ELECTED PRESIDENT OF FEDERATION

At the annual convention of the Pennsylvania Motor Federation held at Pottsville, last week, S. Edward Gable, of Lancaster, was elected president. Mr. Gable has been active in organized motor activities for the past ten years, having served as president of the Lancaster Automobile Club for the past eight years, a vice president of the State Organization and a member of the Board of Directors of the American Automobile Association. These connections have given Mr. Gable a training and an experience which will be of great value in his new position.

Charles W. Eaby, solicitor for the Lancaster Club served as a member of the resolutions committee at the convention. The Federation went on record in opposition to the proposed \$50,000,000 bond issue to be voted on at the November election for the construction of highways in the State. A resolution was adopted expressing opposition to the use of gas tax money for any other than road purposes.

The following represented the local Club at the meeting of the Federation: S. Edward Gable, J. G. Forney, Chas. W. Eaby, H. E. Trout, Jacob L. Haines, Frank M. Bachman, P. Morris Eaby, Frank L. Spence and Albert M. Groff.

The May meeting of the Lancaster Automobile Club will be held this Friday evening at Quarryville. A large attendance is expected.
