"Where Quality Counts"

PENNA. BUREAU OF MARKETS FOR THE BULLETIN

Receipts of asparagus from nearby states were liberal on the local mar ket today and prices dropped sharply. The warmer weather was partly responsible for the increased supply. Very large green stock sold at \$3.50 to \$4.25 per dozen bunches with a few exceptionally fancy lots higher. Large brought \$2.50 to \$3.25, Medium \$2.00 to \$2.75 and small \$1.00 to \$1.75, according to the Pennsylvania and Federal Bureaus. Old potatoes were steady with

noderate offerings and a fair demand Pennsylvania round whites brought \$1.75 per 120 pound sack, while Maine Green Mountains sold at \$2.00 to \$15. New potatoes were slightly weaker and the best South Carolina Cobblers sold at \$5.75 to \$.600 per barrel while Georgia stock showing some decay brought \$4.50.

Most receipts of strawberries were in poor condition and the mar ket and this stock was weaker. Truck receipts of New Jersey berries sold at at \$2.25 to \$4.00 per 32 quart crate, with a few bringing \$4.25 to \$4.75 Truck receipts of Maryland and Dela ware berries brought \$2.00 to \$4.50 with some express receipts selling as high as \$5.00 to \$5.25. Green vegetables were generally

dull. Spinach sold slowly at 30c to 50c per bushel, escarole at 30c to 60c kale at 15c to 40c and broccoli at \$1.00 to \$1.10. Rhubarb was in light supply and the market improved. Prices ranged from \$1.50 to \$3.50 per 100 bunches while spring onions sold

at \$1.50. Sweet potatoes continued firm at \$1.25 to \$2.75 per bushel while parsley was steady at \$1.50 to \$2.25. Radishes were weak and sold at 50c to 85c per bushel. Apples were firm with nearby Romes and Winesaps selling at \$2.00 to \$2.50 per bushel. The first sour cherries of the season were received from Virginia and sold

A stewed chicken has many reasons for appearing on the table at frequent intervals. Not only is it less expensive than a roasting chicken, but it is usually larger, which is an advantage for the big family. Also, cooking a chicken this way provides an abundance of rich, delicious chicken broth which can be made the foundation of another meal.

But stewing a chicken takes so long, women often say. That depends upon the way it is cooked. If a fireless cooker is used, ten hours will be required. This means putting the chicken on at eight in the morning for a six o'clock meal.

Then there is the old-fashioned stewing kettle. This method takes only four hours, but care must be taken that it does not boil dry. Moreover, the escaping steam allows a great deal of valuable mineral salts and flavor to escape.

Stewing a chicken in a waterless cooker is an improvement in time over the other two ways, since it requires only two and a half hours, but the most rapid and economical way of all is to cook the bird in a steam pressure cooker, which takes only thirty-five minutes. Put on at five minutes of six, the chicken is thoroughly cooked and tender and ready to serve by six-thirty. None of the flavor will be lost. The saving in fuel cost will be from a fifth to an eighth that of cooking by the other methods. At the same time, peas and potatoes can be cooked in separate dishes

above the chicken. Serve an aspic or tomato salad with this dinner and a light dessert. (C, National School of Pressure Cooking.)

MAGNETIC MILKER PLEASES COW; SAVES WORK, MONEY

The Milking Job Made Easy and Pleasant by the Magnetic Milker. magnet is used. We have now applied

Years of service in **MODEL T FORDS**

THE Model T was so strongly and sturdily built that it is still rendering reliable, economical service to motorists in every section of the country. Millions of these cars can be put in shape for two, three and five more years of use at very small cost.

So that you may have this work done economically and satisfactorily, the Ford Motor Company is still de-voting a considerable section of its plants to the manufrature of Model T parts. It will continue to do so as long as they are needed by Model T owners. The following list gives the approximate labor charges for recon-ditioning the Model T Ford :---

.75 - 10.50New York-The milking machine 10.25-11.75 which has saved labor, reduced expense 7.50-10.25 and increased production on countless farms, is about to make the milking

ioh still easier and more profitable. This is indicated from an announce nent made here of an invention to milk the American cow by magnetic force.

After exhaustive research and tests, a device has been perfected, according to Ralph Stoddard of the De Laval \$11.00-12.00 \$12.00-12.50 Engineering Laboratories, which will \$12.00-12.50 triple the speed of milking the dairy herd, provide pulsations that will al-\$8.25-11.00 ways be the same, and actually milk

British Monarch's Title James I wished to use the title o King of Great Britain" instead of King of England and Scotland," and even went so far as to have it placed on his coins. In 1604 he asked par iament to consent to the new title fears were expressed lest the laws and liberties of England might e jeopardized and the commons urged that some agreement as to the terms of union precede assumption of the title. James finally yielded to the advice of his minister Robert Cecil, and the change was deferred. The title did not receive parliamentary sanction until the Act of Union,

Regiment's Wooden Sword Whenever the Tenth infantry of the United States army appears on parade either at its home station, Fort Thomas, Ky., or in Cincinnati. near by, one noncommissioned officer always marches along carrying a wooden sword.

This sword was carved from a tree which still stands at Devil's den, on the Gettysburg battlefield, where the forerunners of the present regiment liminary estimates of production took part in the decisive struggle. The sergeant who has served longest in the regiment is accorded the honor of carrying the sword.

this same principle to the mechanical milking of cows in a way that will increase efficiency on the farm, save money and make cows happier so they will yield more "It is a well-known fact that a cow is more contented, will give more milk

and quicker, if it is milked by the same man every day. It is necessary to please the cow to get the most milk and it has been found that certain stimuli or methods of milking are mos pleasing. The new magnetic device will milk the cow with the same touch the year round and will speed up milking operations, for one man with a magnetic milker will do the work of

three hand milkers. Among the benefits to the farm, Mr. Stoddard pointed out that generally speaking, the magnetic milker saves half the time of milking, which in the aggregate will mean the saving of millions of dollars, or millions of extra hours for doing other farm work and for rest and recreation.

Homes Can Have Healthy Air Without Big Expense

While 50 years ago it was believed that the only demand for correct ventilation was that the air be free from carbon dioxide, the Holland Institute of Thermology of Holland, Mich., points out that present standards place emphasis upon air-supply, temperature, relative humidity and air-motion.

"has developed to the point where Adequate air-supply means that evnew homes are now being built in which the temperature can be auto-matically controlled all the year ery room receives 30 cubic feet of air per minute for each person in 'round. This will also include keep-Proper temperature is generally ing the rooms at the proper humidity. held to be from 68 to 70 degrees.
