SURVEY REVEALS RESERVE TIMBER

(From page 1) Thirteen million two hundred thousand acres are reported to be the area of forest land in Pennsylvania. This, it was pointed out, is 47 per cent. of the total land area.

By far the major part of this area was found to be in adjoining strips of forest in the mountain and plateau regions, which comprise 11,489,225 acres. Isolated forest areas 50 acres or less in size amounted to 1,716,775 acres, or less than one-seventh of the total.

The forests of the State were found to contain 13,477,060,000 board feet of mature or saw log size, and 126,361,759 cords of cord-wood material. The amount of saw log material seems large expressed in board feet, but when converted into cords is equal to 37,436,227 cords or considerably less than the trees of only cord-wood size, Staley said.

Four board classes were considered in the survey, according to the kind and size of trees and forest growth. These ranked from land devoid of practically all forest growth to that carrying mature forests. The growth on the State's entire 13,206,000 acres of forest land was divided as follows:

Class I, 200,668 acres on which the forest tree growth is completely killed and nothing growing except bracken, huckleberries, briars and weeds.

Class II, 1,565,508 acres on which are found scrub oak, fire cherry and aspen, with sparse and small growth of other tree species.

Class III, 7,594,418 acres on which the more valuable forest tree species are growing, up to a diameter of six inches.

Class IV, 3,745,407 acres on which are growing trees of merchantable size and more than 50 per cent. of the stand is not less than 6 inches in diameter.

Twenty-two per cent., or practically one-fourth of the forest growth in the State is large enough to be cut for the market, and 77 per cent. of the forest growth is comprised of trees containing material of only cordwood size. The classification of size for the purpose of this forest inventory does not imply however, that all timber that is classed as merchantable should be marketed.

SOLDIERS' TRAINING CAMP AT MT. GRETTA WILL BE ABANDONED IN 1932 (From page 1) Space for combat firing and artillery practice; safety in both types of firing; land available at low cost; room for assembly of all units of the division; roads can be constructed economically and rail facilities made available; the camp can be laid out advantageously; the site is removed from populous districts.

The State Military Reservation Commission comprises the Governor, Major General William G. Price, of Chester, commanding officer of the National Guard; Adjutant General David J. Davis; Brigadier General E. C. Shannon, of Columbia; Brigadier General Edward Martin, Washington and two civilians, John Longacre, of Lancaster, and Harry B. McDowell, Shafter.

How the X-Ray Lights the Way

Thousands of lives are saved from tuberculosis every year by means of an instrument which was developed through an accidental discovery in the laboratory of a German professor of physics in 1895. The X-ray—that penetrating light which is the eye of the physician—was discovered when William Konrad Roentgen was called away suddenly from his work and left his desk in disorder.

This is how it happened: Roentgen had been studying the green light given out by a new type of electric bulb. When he was interrupted, he placed this lighted bulb on a book which contained a large antique key, used as a bookmark. By chance, there reposed beneath the book and key a photographic plate holder.

When the professor later exposed the plate and developed a picture, the shadow of the key appeared. Today, the doctor uses the X-ray in many ways to discover signs of disease. It is one of his principal aids in the discovery of tuberculosis.

As tuberculosis still kills more young persons in the first decade of maturity than any other disease, the X-ray has come to be an instrument responsible for the saving of thousands of lives. Tuberculosis associations are calling attention to the fact that tuberculosis is "The foe of youth." These organizations urge the use of the tuberculin test—a harmless skin reaction—on young people, especially those in whose homes there is a case of tuberculosis. Those who show that they are severely infected should have an X-ray of their chests.

Laennec's Discovery

The stethoscope was invented by a young doctor of Brittany, Theophile Laennec, about 125 years ago. One day, while he had charge of a very fat girl in a hospital in Paris, he was much put out because he could make no diagnosis. She was in great distress and panting for breath, but Dr. Laennec could not get at the cause of the trouble. The thick layer of fat blanketed the sounds of the chest.

That afternoon, the young medico took his usual stroll through the Gardens of the Louvre. Debris lay scattered about, the result of one of the several upheavals of the French revolution. On a pile of timbers, he noticed two or three boys bent over one end of a long beam of wood with their ears pressed tightly to it. At the other end, another boy was lightly tapping the beam. Of course, these slight sounds traveled with little resistance along the beam, much to the amusement of the youngsters. To them, this crude telephone was a jolly toy; to Laennec, it was the solution of his problem. He turned on his heel and hurried back to the hospital.

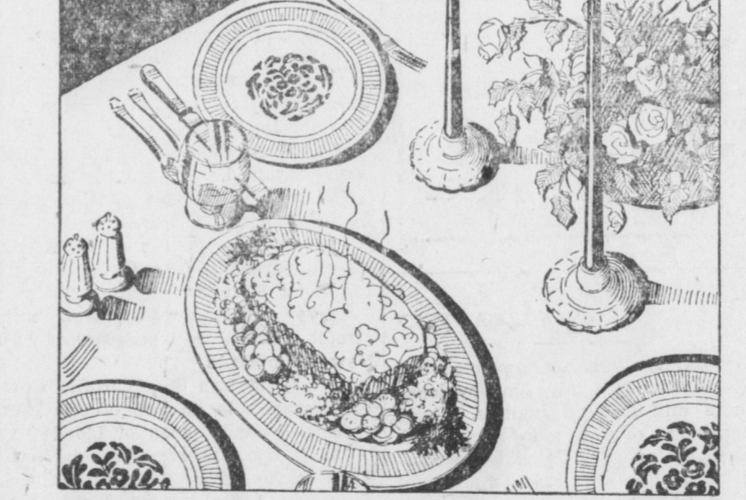

Striding into the ward, he snatched up a paper-backed book, rolled it into a tight tube, and to the amusement of the nurses, placed one end of this tube to the girl's chest and his ear to the other. The sounds he wished so much to hear came through even more clearly and crisply than he had expected. Laennec did even more than this for medical science. He taught that tuberculosis is contagious, though the germ was not discovered until 80 years later.

Baseball Days Are Here

BASEBALL diamonds are beginning to resound with the clamor of America's great game; picked students in high schools and colleges everywhere are struggling for places on the teams. A note of warning is being sounded by tuberculosis and health associations in Pennsylvania during April that these days of stress, requiring rigid training, should include plenty of rest and nourishing food to avoid the dangers of overstrain. It is pointed out by organizations financed by the Christmas Seal sale that "Tuberculosis is the foe of youth" and the chief cause of death among young adults.

A Dollar Dinner for Four

Do your thrift dinners cry out "thrift"—or do they look so attractive and taste so good that no one can guess the cost? It's all a matter of careful planning. First, get an appealing menu, like the one given below; second, prepare the foods carefully; third, deem them worthy of your pretty china and table covers. Then you can say with sincerity to your casual guest "Do stay for dinner!"

Menu Veal Loaf with Carrot and Pea Sauce, 25¢ Fried Potatoes 6¢ Mashed Turnips 5¢ Dressed Lettuce 10¢ Bread and Butter 8¢ Baked Pineapple Pudding 26¢ Demi-Tasse 3¢ Veal Loaf with Carrot and Pea Sauce: Remove wrapper from a 7-ounce can of veal loaf, cover with boiling water and boil for fifteen minutes. Remove meat from can, placing it on a hot platter. Make a sauce of one and one-half tablespoons butter, one and one-half tablespoons flour, and two-thirds cup milk and the liquor from an 8-ounce can of carrots and peas. Add the carrots and peas, season to taste with salt and pepper, and pour over the veal.
