

Tire Prices Going Higher Buy Now! Save Money! Equip with Firestone

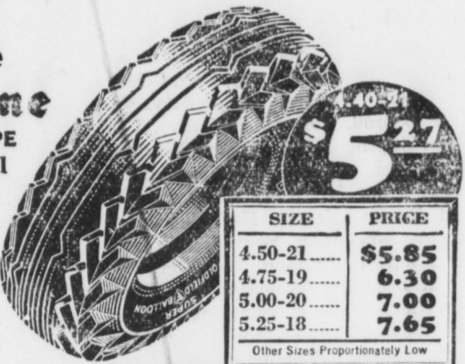

TIRE prices have joined the upward trend. We believe they will advance again—in fact, increasing prices of rubber and cotton are sure to bring higher tire prices. Get your tire requirements NOW while we are selling Firestone Extra Quality Tires at these low prices. BUY TODAY! SAVE MONEY!

are made by master tire builders. REMEMBER—your brakes can stop your wheels, but your tires must stop your car.

Announcing the NEW Firestone SUPER OLDFIELD TYPE

This tire is the equal of all standard brand first line tires in Quality, Construction and appearance. Sold at a price that affords you real savings.

FIRESTONE OLDFIELD TYPE

This tire is superior in quality to first line special brand tires made without the manufacturer's name and guarantee, offered for sale by department stores, oil companies, and mail order catalog houses. This is "The Tire That Taught Thrift to Millions."

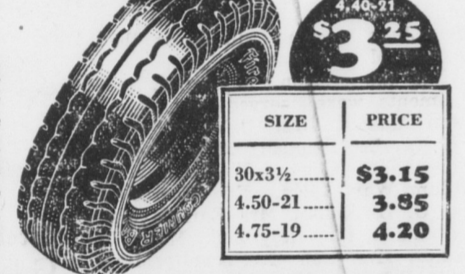

FIRESTONE SENTINEL TYPE

This tire is of better Quality, Construction and Workmanship than second line special brand tires made without the manufacturer's name and guarantee and offered for sale by mail order houses and others.

FIRESTONE COURIER TYPE

This tire is of good Quality and Workmanship—carries the name "Firestone" and full guarantee—sold as low as many cheap special brand tires manufactured to sell at a price.

COMPARE Quality, Construction, Price LOW COST MOTORING NECESSITIES

Dependable Firestone Batteries
\$5.49 and your old battery FREE
We will test any make of Battery FREE

Firestone Spark Plugs Save Gasoline
58¢ Each in Sets
We will test your Spark Plugs FREE

MAGNEX BATTERIES \$3.95 and your old battery

MAGNEX SPARK PLUGS 3 for \$1

The New Firestone Sealyleak Proof Tube
Extra Heavy Red Tube. Coated inside with a special compound, which seals against air loss. Flexible rubber valve stem—no chance for air leakage—constant air pressure, insures greater tire mileage.

Firestone Brake Lining
The new Firestone Aquaproof Brake Lining is moisture-proof and embodies a new principle which produces smoother braking action and more positive braking control. We will test your Brakes FREE.

BIG ELECTRIC LIGHT COMMUNITY AUCTION SALE THURSDAY NIGHT, MAY 11th, 1933

At 7 O'clock Sharp—Rain or Shine
At Wagner's Park, Beverly, Pa., on pike from Hershey to Elizabethtown 4 Incubators

50 Head Good Hogs, All Inoculated 3,000 DAY-OLD CHICKS WHITE PEKIN DUCKLINGS

The Cashdown Nurseries, from Adams County, will be here with a truck load of complete nursery stock guaranteed and inspected, all kinds of fruit trees and flowering shrubs; 100 bu. Adams Co. Irish Cobblers and other seed potatoes; a full line of fruit, bananas, dry goods, hardware, poultry, rabbits, bologna, line of groceries and cigars, lot of other articles.

G. K. WAGNER

Stover, Vogle and Hoffmaster, Aucts. We sell anything you have on small commission. Terms cash. We have a big auction every Thursday night at 7 o'clock. I have day-old chicks for sale every day at my place. Come to see them, prices are right, also ducklings and day old turkeys. Give me your order early. apr.26-47

A Pin Prick and the "Magic Eye" Detect Tuberculosis Before It Begins

Dr. Clemens Pirquet, famous Viennese children's specialist (left) and Dr. Wilhelm Konrad Roentgen, German physicist, whose contributions to medical science have saved thousands of children from tuberculosis. Dr. Pirquet devised the tuberculin test and Dr. Roentgen discovered the X-ray.

By A. SCHAEFFER, JR.

AMONG the marvels of medical science there are few more amazing than the fact that a pin prick and a photograph can detect tuberculosis years before it begins. For this the world is indebted to two of the greatest figures in the history of medicine—Clemens Pirquet and Wilhelm Konrad Roentgen.

The pin prick is caused by the tiny needle of the hypodermic syringe as it injects a drop of tuberculin under the skin. The "magic eye" is, of course, the X-ray. Simple, brief and painless though these methods are, many a child owes his life to them, for they reveal the presence of tubercle bacilli in the body and give some indication of the extent to which the bacilli have established themselves in the lungs, there to lie in ambush until the body's resistance is low and they may launch a successful attack.

Such knowledge looms to its true significance when it is remembered that tuberculosis kills more persons between the ages of 15 and 45 than any other disease, and that only by discovering cases in the early stages and arranging for treatment can this unnecessary toll be lessened.

Who were the men who devised weapons so powerful that they can detect the presence of this widespread disease years before it begins?

The Children's Doctor

To Dr. Clemens Pirquet (1874-1929), brilliant Viennese physician, must be attributed the vision that enables us today to examine large groups of children for tuberculosis by a method that is rapid, safe, economical and efficient.

Tuberculin was developed by Robert Koch, the discoverer of the tubercle bacillus, during his search for that germ, and was used by him as a routine laboratory procedure. Pirquet, however, who was famous for his work and popularity among children, was the first to realize the possibilities of tuberculin for examining groups of children on a large scale.

By applying a small drop of tuberculin to the skin and then making a slight scratch he demonstrated the test known by his name. Koch's method had been to place a drop of the substance in the eye of animals he wanted to test.

Modern Technique
The modern method of giving the tuberculin test is to place a drop of the liquid within the upper surface layer of skin, either by a tiny scratch or by an injection. If the germs of tuberculosis are in the body a small reddened area, like a little red lump, usually appears from twelve to twenty-four hours later at the spot where the tuberculin was injected. If no tubercle bacilli are in the body nothing happens.

Should the test prove positive it should not cause worry because it means only that living tubercle germs are in the child's body. The child's body should be X-rayed, however, to make certain that no harm is being done in the lungs. The X-ray, which is the only means we have of determining this fact, was discovered by accident.

Dr. Wilhelm Konrad Roentgen (1845-1923), of the University of Wurzburg, Germany, was the discoverer of the X-ray, and for this and other notable contributions to physics he received the Nobel prize in 1901.

Roentgen was studying the light thrown out by a strange new vacuum tube invented by Professor Crookes, of London, which glowed with a peculiar phosphorescence when electricity was passed between the two electrodes inside the tube.

The Fortunate Accident

One day he was called away from his work, but before leaving he removed his precious tube from its clamp and set it down, still glowing, on a book he had been reading that morning.

Time simple act gave to the world one of the epoch making discoveries of modern science, for in the center of that book, serving as a book mark, lay a large flat antique key, while underneath the book lay a photographic plate holder Roentgen had loaded for an afternoon outing.

Later he gathered up this holder, among others, and spent the rest of the afternoon enjoying his hobby of photography. When he developed the plates, the shadow of his book-mark, the key, appeared on one of them. His scientific mind was puzzled. How did the image of the key get on the plate?

The phenomenon set up a new train of thought in Roentgen's mind which resulted in his belief in the existence of an unknown light ray which he called the X-ray, and he set to work to prove his theory. Finally, on December 28, 1895, he made a report of his experiments before the Wurzburg Physico-medical Society in a paper called "A New Form of Radiation." He gave his discovery freely to the world and never attempted to make a penny from it for himself.

When a case of tuberculosis is discovered the natural question of the doctor is, "From whom did he get it?" and then, "To whom did he give it?"

For this reason the Pennsylvania Tuberculosis Society and its affiliated organizations this year in their Early Diagnosis Campaign are emphasizing the slogan: "Examine and Protect Every Contact."

Christmas Seal Sale

The work of the tuberculosis societies in helping to prevent tuberculosis is made possible by the sale of Christmas Seals and Health Bonds. The Seal sale in Pennsylvania is conducted by the Pennsylvania Tuberculosis Society and its affiliated organizations.

Happy With Reason

This child was saved from grave danger of tuberculosis when it was found his parents had the disease. They were told how to guard him from infection. The doctor will examine him at intervals to watch for suspicious signs. Every time a person with this disease is discovered a search should be started to find out "from whom did he get it, to whom has he given it," and every child in the family should be given special protection.

One Bad Apple

An old proverb says, "One bad apple can spoil the barrel." A case of tuberculosis may, like a bad apple, spread the disease from him who has it to those with whom he lives.

The spread of this disease can be prevented by examining every person who has been in close contact with a case. This means not only medical examination of adults but also of children.

A Bird Neighbor

The King bird, white on the breast, grey on the back, the tail tipped with white, and with a bright red spot on the top of the head, will sit on the topmost limb of a tree, scanning the upper air for the sight of another bird with which to pick a fight. He does not confine himself to birds of his size or smaller ones, but usually picks for his victim, a larger bird often a crow or a small hawk. Generally, both male and female Kingbirds will work together, by rapid flight, overtaking some unfortunate crow and by one flying on each side and making attacks at the same time, will finally compel the attacked to come to earth.

Its nest is a loosely constructed affair, built in a pear or apple tree in an orchard, and generally fifteen or twenty feet from the ground. The eggs, four or five in number, have one peculiarity not possessed by many other species. They vary in size to such an extent that one would think they were not laid by the same bird.

His Mule
"Say, Rastus," exclaimed the visitor in town, "I hears you have the balkiest mule in the whole state."

Rastus scowled at his interrogator: "Pawdon me, sah, but Ah never discuss mah wife's stubbornness wif strangers."

"Like Trail in Snow"

"The tuberculin test may reveal the source of tuberculosis in the home like tracks in the snow," according to Dr. Samuel O. Pruitt, medical secretary of the Pennsylvania Tuberculosis Society.

"Herein lies the great value of this test in young children, for if the source of infection is discovered and controlled by education or treatment few children found to be infected will develop real tuberculosis.

"The tuberculin test is made by injecting a drop of liquid called 'Tuberculin' within the upper surface layer of the skin. This test is harmless. If the spot becomes red and swollen within two or three days the reaction is called 'positive' and indicates infection. It does not indicate the extent of damage and every positive reactor should be X-rayed.

"Should the test prove negative it is of great significance, because the examining physician may conclude that whatever symptoms the patient has shown are not due to tuberculosis.

"It is in grown-ups after the school age that the X-ray is most valuable, and all persons of high school age should undergo such examinations.

"Special emphasis is laid on these facts during the Early Diagnosis Campaign being conducted in Pennsylvania by the Pennsylvania Tuberculosis Society and its affiliated organizations. In this struggle the tuberculin test and the X-ray are our heavy artillery."

Books for Students

Senior students numbering 606 in medical schools in Pennsylvania have received a textbook on tuberculosis as part of the sixth annual Early Diagnosis Campaign. The book is entitled "Childhood Type of Tuberculosis" and was supplied through the co-operation of the National Tuberculosis Association and the Pennsylvania Tuberculosis Society.

The authors were four prominent tuberculosis specialists, Dr. Eugene L. Opie, of the Cornell University Medical College, and formerly of Philadelphia; Dr. Henry D. Chadwick, tuberculosis controller, Detroit; Dr. F. Maurice McPhedran and Dr. Joseph D. Aronson, of the Henry Phipps Institute, Philadelphia.

Pack School Lunch Basket With Care, Urges Dr. Ireland

Milk, Fruits, Eggs Among Essentials For Schoolchild's Noon Meal, Says Health Education Authority

By Dr. Allen G. Ireland
Director, Physical and Health Education, New Jersey State Department of Public Instruction

IT must be remembered that many schools in our state do not yet have school lunch programs, and the children must bring their own lunches to school. What should the box lunch contain to overcome the handicap it necessarily imposes upon proper nutrition?

The menu must necessarily be restricted, but with a little planning a substantial lunch of nourishing foods may be provided. Variety will of itself be stimulating to the appetite.

Fruit is one of the essentials. As a substitute for fresh fruit, a small jar of some stewed fruit, applesauce, dates or figs should be included.

The most nourishing breads for sandwiches are whole wheat, oatmeal, brown, raisin or nut. Bread should be at least a day old. Muffins and corn bread also are good.

Milk, Eggs Advised
To avoid monotony, sandwiches should be varied often. This can be done by using different kinds of filling and by varying the kinds of bread used.

For dessert, fruit, plain, ginger, date or oatmeal cookies, sponge cake, gingerbread, custard or sweet chocolate are good.

The box itself should be one that is easy to clean and convenient to carry. The collapsible tin box that

Plants are a cool season crop requiring an abundance of moisture but a well-drained soil. Early, mid-season, and late varieties should be planted at the same time. Fertilizer and manure will improve the yield.

Outside appearance is important in home improvement. Flowers, shrubs and well kept lawns are attractive. Garbage and waste should be disposed of promptly. Small repairs can be made.

Peas are a cool season crop requiring an abundance of moisture but a well-drained soil. Early, mid-season, and late varieties should be planted at the same time. Fertilizer and manure will improve the yield.
