PAGE SEVEN

FOR YOUR INSPECTION

The merchant and manufacturer who advertise, actually are placing their merchandise before you for inspection. They invite your most critical attention and an uncompromising comparison.

And their advertisements, so to speak, say to their products: "We have introduced you to the publicnow stand on your own merits."

If the manufacturer and merchant did not have confidence in their wares, they would hesitate to call attention to them. For advertising rigidly tests the maker, the seller and the merchandise.

Business so tested, and found not wanting, is prosperous.

In the long run, you can depend on the man who advertises, as well as on his product. That is one reason why people have found that it pays to read advertisements.

It is through advertising that the excellent things of the world are brought to the attention of those who are seeking for the best and most economical way to spend their money.

Read the advertisements. They are news.

prices while poor and white stock moved slowly. to these destructive insect pests. When he first noticed the worms moving in on his young beets, the World war veteran and former Colorado Aggie student pulled both brooders in which the Leghorn cockerels were housed to the edge of the field and turned them loose. The birds spread out all over the field and followed along the rows, gobbling up the worms on one plant after another, the farmer told the extension poultryman for the agricultural college. It was much cheaper than spraying to kill the worms, he says.

> At the same time the young roosters grew rapidly. Not a single beet was lost to the were destroyed by being trampled by the chickens near the brooder houses. too close to the beets. It is suggested that other sugar beet

growers might try the plan in con trolling insect pests. It is recommended that cockerels used for this purpose be fed a grain ration for two or three weeks to put them into condition for the market. Large flocks of young turkeys have been used to control alfalfa webworms in many instances.

USES CHICKENS TO

SAVE SUGAR BEETS

Farmer Allows Cockerels to

Feast on Insects.

A Colorado farmer saved his sugar

beet crop last year by letting his 300

young cockerels run in the field and

feast on juicy worms and webworms

At the same time neighbors around

which infested it.

Keep the Cooties Off

Biddy, Out of Henhouse Any ex-soldier can sympathize mos heartily with the plight of a hen or a pullet shut up with a good infestation of lice to make things lively for her. The A. E. F. boys know how to get rid of their unwelcome visitors but unfortunately Biddy cannot "read her shirt." Neither can she dip her clothes in hot water or use a flat-

It is easy, however, to put her through a delousing process which will leave her clean and free from vermin Just a little nicotine solution painted

HEALTH TALK WRITTEN BY DR. THEODORE B. APPEL, SECRETARY OF HEALTH "A few days ago the papers noted

he passing of a famous trainer of men William Muldoon. His method was nique only in that it was unusual And he made more than a million dollars out of it. What is more remarkable is that the price of his services, judged by the benefit accruing to the purchaser, was so small as scarcely to justify mention though it ran into hundreds of dollars for each case. What he really sold was will-power-one of the rarest commodities on earth," states him lost practically all of their beets Dr. Theodore B. Appel, Secretary of Health.

"Men who imagined they were kings in their own right and thus above the rules ordained for lesser folk, found their way to Muldoon's Camp in large numbers. Attaining unusual material success they falsely imagined that their bodies were secondary to their wishes. Thus, snubbing nature and lacking the moral stamina to snap into line again, they would enter the famous camp for reconditioning. In so doing, individual desires were checked at the door. The Muldoon discipline immediately took hold-and the results in the majority of instances were startling.

"There was nothing fancy about his worms, he says, but a few plants system. Nature merely was given supreme and unalterable command. To bed for eight hours each night, proper This could largely be prevented, it is foods in proper amounts, rest, exercise believed, by placing the brooder houses and recreation as decreed by Old Dame some distance apart, and perhaps not Nature and the elimination of habits which tend to undermine vitality-that was about all there was to it.

'The sort of 'discipline offered by Muldoon to his clients is not only needed by sportsmen and overwrought business men, but by most of us. Of course it is easier to prescribe than to do. However, to the extent that one is able to control his desires and habits so as to conform reasonably to nature's dictates, to that extent is one likely to reap the finest prize the world has to

offer-abundant health and vigor. Therefore it perhaps might be well for the majority of us to take stock of our habit deficiencies and truthfully admit the physical handicap to which they are subjecting us. Then, apply some of the Muldoon technique to our own lives for our health's sake. Now then, how about that will-power?"

You can get all the news of this locality for less than three cents a week through the Bulletin.
