Wilting Method for Silage Is Suggested

Experiment, Extreme Care Needed to Make It Work

By C. W. BENDER
(Professor Dairy Husbandry, Rutgers University.)

In view of the high price of molasses and the scarcity of phosphoric acid for preserving silage, the wilting method of ensiling legumes, grasses and cereals—a method requiring practically no preservatives—sounds good.

The wilting method will work, but it also takes experimental control and extreme care to make it work.

Moisture Content Excess.

Farmers experienced at making grass silage know that mold accumulations, caused by air pockets or air leakage in the silo, often occur

even when the silo is filled with material having a moisture content of 72 to 78 per cent.

Yet materials with this amount of moisture pack more readily and develop more pressure than grasses with lower moisture content, and the wilting method calls for wilting down the green material to a moisture content of only 65 to 68 per cent. Thus there is a greater danger of mold when the wilting method is used.

Secondly, some type of apparatus is necessary to determine the exact moisture content of the green material.

How long it takes to wilt the material down to the proper moisture content cannot be determined in advance. One thing is certain: There will be many delays in filling the silo, thus increasing the danger of mold and high temperatures, both of which tend to destroy nutrients.

Fill Silo Three-Fourths.

The silo must be filled more than three-fourths full with wilted green material within two days. The material must be evenly distributed and well tramped. Filling should be continued on the third day, using high moisture grasses or legumes to which a preservative has been added so that sufficient pressure is generated to exclude the air from the partially wilted mass. Delays in filling beyond this period may ruin the silage, a fact which has been learned by many farmers.

Furthermore, the wilting of a green crop destroys carotene. The longer the period of wilt the more carotene is lost, an important consideration in producing milk of excellent quality.

Trap That Hornfly

Dairy cows will not produce at maximum when infested with hornflies.

The flies cause loss in milk production because they suck cows' blood, and their annoyance often causes cattle to refuse to graze. Hence, they do not get their fill of grass which is the best milk producer, and it takes a part of the feed which otherwise would go to production of milk to replace the blood.

Some investigators claim that during seasons of abundance hornflies are responsible for losses of one-quarter to one-half of the normal milk production. Moreover, annoyance by the flies during milking might lead to contamination of the milk with consequent lowering of its quality.

Sprays, which many dairymen use, will keep flies off cattle during milking and for an hour or more afterward. But this does not prevent loss in milk production. However, a cattle fly trap used as a gateway to and from water, feed, or other frequented places, has been found effective for the control of hornflies on many dairies, farms and ranches.

Farm Notes

Hens that have started to lay have a large, moist vent and a soft pliable abdomen.

New York ranks fourth to Texas, Wisconsin, and Missouri in the egg-producing industry, with 18 million pounds produced in five plants.

Goats respond well to good pasturage if the land is reasonably dry. They also do well on rough ground if enough feed is present.

Beauty and the Beets, Obviously

THE increasing employment of women to meet the man-power shortage is going to give a perky touch to lots of industries. In the beet sugar industry, as an example, which is busily engaged in manufacturing sugar so that you can "cash" your ration stamps, women are being employed for the first time in history. They perform operations which involve relatively little muscular effort.

Here's a pretty California lass perched on the edge of a freight car filled with newly-harvested sugar beets. In her hands she holds two beets which should yield about eight ounces of pure, sparkling sugar—or enough for your current weekly ration. With the harvest of sugar beets now nearly completed in nineteen States of the Union,

the industry hopes to produce enough sugar to provide an eight-ounce weekly household ration for every man, woman, and child in the United States for one year. Importance of domestic beet sugar is underscored by the fact that it needs no ocean shipping to get from factory to consumer, and it is thus free of the hazards attending the importation of sugar from tropical areas.

In addition to the production of sugar, an indispensable energy food, the beet sugar industry is contributing to the relief of the meat shortage. Sugar beet by-products—leafy tops, pulp, and molasses—are fed extensively to lambs and cattle and each year are responsible for the production of millions of pounds of beef and mutton.

SALUNGA

Rev. and Mrs. William Ziegenfus of Landisville were entertained by Mr. and Mrs. Walter Peifer last Thursday evening.

Mrs. Annie L. Peifer, Mr. and Mrs. Howard Peifer and daughters, the Misses Ann and Helen and grand daughter, Shirley Peifer of Elizabethtown R. 1 last Sunday, Robert Bishop returned from a hunting trip to Perry County last Wednesday with a deer.

Mr. and Mrs. S. H. Hiestand are spending Tuesday to Friday with their daughter and son-in-law, Mr. and Mrs. Henry Danner of Washington, D. C.

The Sunshine Bible Class of the Methodist S. S. held its Christmas party at the home of Mrs. Charles Myers, last Wednesday evening. Decorations were in keeping with the season, Mrs. Nelson read the scripture reading. Mrs. Blessing offered the prayer. Election of officers were elected: President, Mrs. J. M. Newcomer, V. President, Mrs. H. B. Stehman;

Secretary, Mrs. Florence Sweitzer; Asst. Secretary, Mrs. Warfel; Treasurer, Mrs. Mary Minnich. The names of the Friendly Sisters were revealed and new names chosen for the coming year. The hostesses were Mrs. Chas. Myers, Mrs. J.M. Newcomer, Mrs. Florence Sweitzer and Mrs. Levi Peifer. The following were present: Mrs. E. T. Myers, Mrs. Russel Cooper, Mrs. Walter Eshleman; Mrs. Mary Minnich, Mrs. Albert Rodgers, Mrs. Floyd Wetzel, Mrs. Norman Warfel, Mrs. H. B. Stehman, Mrs. Phares Stehman, Mrs. Robert Bishop, Mrs. Willis Kendrick, Mrs. Winfield Nelson, Mrs. Robert Enterline, Mrs. R. S. Rollin Steinmetz, Mrs. Harry Blessing, Mrs. Lloyd Hamilton, Mrs. P. E. Young, Mrs. John Peifer, Miss Mary Young, Mrs. J. M. Newcomer, Mrs. Charles Myers, Mrs. Ray Sweitzer and Mrs. Levi Peifer.

Educational Adviser

Suggests Rural Change

The little red schoolhouse can bring its reading classes up to date just as easily as schools in urban districts, according to Lois Clark, adviser of early childhood and elementary education in the Pennsylvania department of public instruction.

Speaking before the annual conference on reading instruction held at the Pennsylvania State college over the past week-end, Miss Clark advocated that the one-room school teacher group her pupils according to ability rather than grades.

"To help each child to do what he is capable of doing, we must free the rural teacher from the artificiality of grade organization and let her give pupils with third grade reading ability books they are capable of mastering regardless of their age or grade level," she said.

Miss Clark recommended three ways to bring about improvement in reading in rural schools.

1. Re-classify pupils according to their ability.
2. Teach reading in other subjects as well as in "reading class," making sure that pupils are familiar with words found in geography, health, and history textbooks in addition to those in readers.
3. Encourage more free, voluntary "reading for fun" from other books which interest the pupils.

Such a program carried out in one rural school brought about marked improvement in reading, better results in achievement tests, and greater interest in books, she declared.

Save This for Your

August Plant Feeding

Strawberry beds—because the first buds of the strawberry are formed in the fall of the year, the plant should be fed well during August and September, to insure a heavy crop of fruit for the following year.

Dahlia—in order to keep plants blooming freely until frost.

Delphiniums—to promote a fall burst of bloom.

Established lawns—to help the grass develop a strong, deep root system that is not subject to winter killing. A fall application of a complete balanced plant food (4 pounds per 100 square feet) is very beneficial.

Seedbed for new lawns—to promote vigorous growth of young grass and promote well-balanced development of both root and top growth.

New and established plantings of crocus and narcissus bulbs—to induce a strong root growth, and thus insure abundant spring bloom.

PUBLIC SALE!

Monday, Dec. 14, 1942
AT 12 NOON

On my farm, Palmyra R. 1, located one-half mile north of Campbelltown, 2 miles south of Palmyra. 2 miles from Hershey.

50 Head Pure Bred Certified Canadian Holstein Cows, Heifers & Bulls

Thirty of these cows are fresh by day of sale, balance close springers. All cattle offered at this sale are personally selected by myself. I buy only those cows I believe have the blood lines, the production, the udder and teat placement that good breeders and dairy men are looking for.

Most of these cattle are second calf heifers, not worn out by over-feeding but are the kind that will improve from the very day you buy them, in fact this is the finest lot of cattle I offered for sale during 1942.

Some very fine heifer calves from the above cows.

3 BULLS OF SERVICEABLE AGE

Special mention—Bull, 14 months old, his six nearest dams averaged 643 lbs. fat, milked 18,325 lbs. milk.

If you are looking for production and show cows do not miss this opportunity.

Catalogues furnished on day of sale when conditions will be made known by

Edward O'Neal

HESS and DUPES, Auctioneers.
HARVEY RETTEW, Pedigrees.
GINGRICH and HORST, Clerks.

PUBLIC SALE

Thursday, December 17th
AT 1 P. M.

ON THE PREMISES

The following described Farm and Home, located east of Elizabethtown, on the Manheim Road, one mile from square.

Farm consists of approximately 75 acres of level productive land, including a large meadow with running stream. The combined farms formerly known as the Breneman and Risser Farms.

ELEVEN ROOM BRICK HOUSE

arranged for two families, with two baths.
BARN and other necessary farm buildings all in good repairs.

Part of this farm is in the borough and has excellent development possibilities from a frontage standpoint. Five building lots are also included.

BEAUTIFUL EIGHT ROOM HOUSE

with all modern conveniences— including hardwood floors, tile bath, fire place and **GARAGE** connected to house.

There is an unfilling well of good water, with another well 200 feet from house connected for emergency. There is an orchard and chicken house, spacious grounds and an ideal location.

This property is located at the east end of the farms described above.
Either property can be inspected any time between now and the date of sale.

Wm. C. Herdle
Owner

Walter Dupes, auctioneer.
D. L. Landis, clerk.
