SWINE ERYSIPELAS IS | other swine diseases. Sympton NOW IN ALL STATES

One of America's newest swine diseases—erysipelas—is rapidly becoming one of its worst. In 1939 it was reported in 28 states. Today,

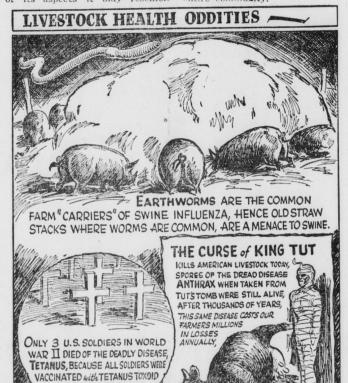

Note the enlarged joints, typical of chronic type of erysipelas.

erysipelas is causing several million dollars in hog losses and exists in every state in the Union. In some areas it has become so implanted in the soil that authorities fear it will be a permanent menace to swine production.

Perhaps the most difficult probresembles hog cholera and in some of its aspects it may resemble entire community

i. clude sudden deaths, arche backs, lameness, high fever, an unwillingness of the hogs to move around. Due to the complexity o the symptoms, a veterinary dias nosis is generally necessary to determine whether erysipelas o some other condition is causin the losses. The disease occurs it two forms. The quick type cause immediate deaths and moves rapidly through the drove. The linger ng type causes enlarged joints an sometimes sloughing of the skin-Fortunately, a very effective vaccine has been developed — and this is proving extremely valuable

ir coping with erysipelas in area where it has become a problem. The important feature about us of the vaccine is that it should b pigs are farrowed, because erysi elas very commonly strikes pig when they are only a few days old Cement floors from farrowing until weaning time, have also aide in the control of the disease. I hogs do start dying of erysipel the carcasses should be disposed lem about coping with swine erysipelas is the fact that it often vermin can act as spreaders, and can menace hog production in the
