Rotary Club Held

(From page 1)

food for thought. The sum and substance of his talk was to be of more service and think less of the material values we can accumulate. Mr. Perry stated that our nation is the greatest and we have become great because of our resources, but we must realize that we cannot continue to abuse these resources and still remain great. The closing part of his talk was based on Loving your Neighbor, and being of service. Mr. Perry is a very forceful speaker, and what he said to those gathered there, will long be remembered.

It was truly a Ladies night that pleased every one. Others who were responsible for the success of the evening were Clarence Newcomer, H. G. Carpenter, Paul Stoner and Ralph Esleman. On Tuesday at the regular meeting, the club will again be privileged to hear Mr. E. C. Ramsey, world traveler, news analyst and commentator, who very recently returned from Germany.

The Bulletin's Scrapbook!

Weeks Best Recipe

Herb Bread Stuffing: 2 gallons of soft half-inch bread cubes, 4 t sage, 4 t thyme, 4 t rosemary, 4 t salt, 1-2 c chopped parsley, 1-2 c minced onion, 1-2 c chopped celery, fowl fat, 3c turkey or chicken lard butter or margarine of fried out bouillon (use broth from giblets and neck stewed together). Combine bread cubes, seasonings, melted fat. Add broth and mix well.

Try growing a sweet potato vine in water. Get one with sprouting possibilities, a glass jar with medium sized mouth or a tall jelly glass and water. Select potato that one end will fit in container, yet will have greater bulk out of the jar. Put in enough water so tip of potato just touches water an keep water level maintained. Set container in subdued light until tiny white roots form in the water, perhaps three weeks. Do not place in brighter light or direct sunlight until there is quite an accumulation of roots. As foliage develops, give sunlight and water supply. Slips may be rooted in water and planted in soil if you like.

Watch Out For Germs
You may be extremely leery of germs and have a home and family spotless and clean, but forget to use care with hands that touch germs. Hands touch other hands of friends and strangers, coins and paper money, door knobs, car strap hangers, public doors and so forth. Keep hands away from the mouth and above all keep hands clean. Use plenty of soap and wash with microbes don't live with cleanliness.

Homemade Weighing Bin Speeds Work

Device Aids Automatic
Feed Handling Setup

It is an old saying that all farm equipment was first thought of by a farmer. Whether that saying holds true may be questioned. But it is certain that much of it did come into being as the result of ideas which some farmer had concerning ways to improve and speed up the performance of his various chores.

A pertinent example of this fact is shown in the accompanying illustration. It shows a homemade weighing bin, which was conceived by a Midwestern farmer for use with his automatic feed handling setup. It holds several tons of feed and is fixed to the ceiling by a series of heavy springs and turnbuckles, one spring being located at each corner of the bin in the center of two turnbuckles. Tension on the springs moves a pointer across a scale at the bottom of the bin to indicate weight up to 3,200 pounds.

A slide gate at the bottom of the bin permits feed to spill out into a cart in desired quantities. The bin

Methods Suggested For Treating Lice

Second Application is
Generally Necessary

The poultry grower has a choice of several effective methods for treating lice. Which one he uses will depend on his preference or the availability of remedies, according to Washington State college. Whatever method is used, birds should be examined 10 days to two weeks after treatment to see if any lice still are present.

Louse eggs are not always destroyed by the treatment used, and these will hatch later. A second
